

### 1: Tech support scam. I gave them remote access. I did a system restore - Microsoft Community

*If you put Microsoft at the center of your home entertainment system, be prepared to hand them the remote control, literally. Following reports that digital television viewers were blocked from recording the new season of NBC's "Gladiators", Microsoft confirmed that it is preventing users from recording the show.*

If one of you is using Windows 7 or 8, you can use the older Windows Remote Assistance. Windows Remote Assistance is still included in Windows 10, just in case you need it. If You Both Have Windows You can do this over email, text message, or on the phone. They must enter this code within ten minutes from the time you received it, or the code will expire. You can troubleshoot their computer, change settings, check for malware, install software, or do anything else you would do if you were sitting in front of their computer. The annotation icon at the top right corner of the window allows you to draw annotations on the screen to help communicate with the other person. Watch out when modifying network settings. This may not always work properly, however. First, open the Windows Remote Assistance application. On Windows 10, the Windows Remote Assistance tool is a little hidden. There are several different ways to invite someone. You may also be able to use Easy Connect. To use this feature, both you and your helper need to have Easy Connect available. This requires peer-to-peer networking features and may not be available on certain networks. You need to provide this password to the other person and they can use it to connect to your PC. This password is only valid for connecting to your PC while this window is open, and it changes each time you restart Windows Remote Assistance. Send the invitation file to the other person however you like—for example, by using Gmail, Outlook. Mail, or whatever other program you use. Provide the person with the password, too. These are separate for a reason. If available, Easy Connect is the simplest option. If the person who connects has received an invitation file, they can also just double-click it and enter the password to connect. After they do, the person who connects will be able to see their screen. At any point in time, they can close the Remote Assistance window to end the connection. Just be careful when modifying some network settings, as this could cause the Remote Assistance tool to disconnect and you may have to set up the connection once again.

### 2: Remote Desktop clients FAQ | Microsoft Docs

*Remote team members can be huge contributors to a company's growth, as long as you create a framework for bringing them on board and managing them in ways that set them up for success.*

Specific error messages The majority of these questions apply to all of the clients, but there are a few client specific items. Setting up Which PCs can I connect to? Check out the supported configuration article for information about what PCs you can connect to. First, have you seen the Remote Desktop Setup Wizard? It walks you through getting your PC ready for remote access. Download and run that tool on your PC to get everything set. Otherwise, if you prefer to do things manually, read on. For Windows 10, do the following: On the device you want to connect to, open Settings. Select System and then Remote Desktop. Use the slider to enable Remote Desktop. Click Show settings to go to the power settings for your PC, where you can change this setting. You can grant permission for specific users to access this PC - to do that, click Select users that can remotely access this PC. Members of the Administrators group automatically have access. Here are some possible solutions to common problems you might encounter when trying to connect to a remote PC. Make sure you have the right PC name, and then check to see if you entered that name correctly. Make sure you have internet connection. The Remote Desktop port might be blocked by a firewall. Click Allow an app or feature through Windows Firewall. You might be asked for an admin password or to confirm your choice. Remote connections might not be set up on the remote PC. The remote PC might be turned off. Is the PC on and awake? Did you enter the right name or IP address? In many home networks, you have to use the IP address instead of the host name to connect. Is the PC on a different network? Did you configure the PC to let outside connections through? Check out Allow access to your PC from outside your network for help. Are you connecting to a supported Windows version? Ask your system admin to do this for you. Which connection methods are supported for company networks? If you want to access your office desktop from outside your company network, your company must provide you with a means of remote access. The RD Client currently supports the following: Other things to check: The 3G network blocks or corrupts VPN. There are several 3G providers in the world who seem to block or corrupt 3G traffic. Verify VPN connectivity works correctly for over a minute. How can I test if VPN is working properly? Verify that VPN is enabled on your device. You can test your VPN connection by going to a webpage on your internal network or using a web service which is only available via the VPN. Web client Which browsers can I use? What PCs can I use to access the web client? Mobile devices are not supported at this time. Can I use the web client in a Remote Desktop deployment without a gateway? The client requires a Remote Desktop Gateway to connect. Ask your admin about it. You can use either the web client or the Web Access page to view the remote resources in a browser. Can I embed the web client in another web page? This feature is not supported at the moment. Monitors, audio, and mouse How do I use all of my monitors? To use two or more screens, do the following: Right-click the remote desktop that you want to enable multiple screens for, and then click Edit. Enable Use all monitors and Full screen. Is bi-directional sound supported? Sound upstream from client to server, for microphones is not supported by the Remote Desktop Client. Mac client - hardware questions Yes, the remote desktop client supports retina resolution. How do I enable secondary right-click? In order to make use of the right-click inside an open session you have three options: To enable right-click, click System Preferences in the dock, click Mouse, and then enable Secondary click. This is true for both Mac and iOS clients. Why do incorrect characters appear in the session? If you are using an international keyboard, you might see an issue where the characters that appear in the session do match the characters you typed on the Mac keyboard. This can occur in the following scenarios: You are using a keyboard that the remote session does not recognize. You are connecting to a previously disconnected session on a remote PC and that remote PC uses a different keyboard language than the language you are currently trying to use. You can fix this issue by manually setting the keyboard language for the remote session. See the steps in the next section. How do language settings affect keyboards in a remote session? There are many types of Mac keyboard layouts. Some of these are Mac specific layouts or custom layouts for which an exact match may not be available on the version of Windows

you are remoting into. The remote session maps your keyboard to the best matching keyboard language available on the remote PC. If your Mac keyboard layout is set to the PC version of the language keyboard for example, French " PC all your keys should be mapped correctly and your keyboard should just work. If your Mac keyboard layout is set to the Mac version of a keyboard for example, French the remote session will map you to the PC version of the French language. Some of the Mac keyboard shortcuts you are used to using on OSX will not work in the remote Windows session. If your keyboard layout is set to a variation of a language for example, Canadian-French and if the remote session cannot map you to that exact variation, the remote session will map you to the closest language for example, French. If your keyboard layout is set to a layout the remote session cannot match at all, your remote session will default to give you the language you last used with that PC. In this case, or in cases where you need to change the language of your remote session to match your Mac keyboard, you can manually set the keyboard language in the remote session to the language that is the closest match to the one you wish to use as follows. Use the following instructions to change the keyboard layout inside the remote desktop session: On Windows 10 or Windows 8: From inside the remote session, open Region and Language. Open Region and Language. Add the language you want to use. Then close the Region and Language window. In the right side of the remote session, near the clock. Click the language you want to switch to such as Eng. You might need to close and restart the application you are currently using for the keyboard changes to take effect. Specific errors Why do I get an "Insufficient privileges" error? You are not allowed to access the session you want to connect to. The most likely cause is that you are trying to connect to an admin session. Only administrators are allowed to connect to the console. Verify that the console switch is off in the advanced settings of the remote desktop. If this is not the source of the problem, please contact your system administrator for further assistance. Why does the client say that there is no CAL? Contact your network administrator for assistance. Why did I get an "Access Denied" error? The "Access Denied" error is a generated by the Remote Desktop Gateway and the result of incorrect credentials during the connection attempt. Verify your username and password. In case of an RPC error or Error 0x59E6 try again after waiting a few minutes, the RD Gateway server has reached the maximum number of active connections. Depending on the Windows version running on the RD Gateway the maximum number of connections differs:

### 3: Access another computer with Chrome Remote Desktop - Computer - Google Chrome Help

*There are several ways a person can gain remote access. 1. The user downloads a virus through a file or pic of an unknown sender. 2. Through remote assistance (this has to be verified by the owner of the computer first. I would advise you to never give out personal information to someone they don't know especially over the phone.*

Share this article on The impact of remote working on commercial real estate For decades, one of the biggest markers of prestige for a business was its property: But this idea is changing, as increasing numbers of us turn away from the traditional model of commuting every day into a central corporate HQ. As a result, the decreasing number of us using the traditional model is rendering these big, sole-occupancy office buildings a smaller part of the bigger picture. For brokers, this could be seen as a threat to their bottom line, as their portfolio of large, single-site offerings becomes more and more outdated. Download the full report here. The future of brokering is selling workspace, not just offices – Offering flexible, scalable solutions as well as options for traditional long-term leases allows you to meet the needs of companies and their staff alike. How the challenges to the office emerged Social and economic trends which have been growing for decades are now reshaping our ideas about the modern office. It began to become clear that bringing hundreds of workers into large corporate HQs every day was not going to be sustainable in the long run. With new, flexible ways of working growing in popularity, our cities and offices are being transformed. But so too are commercial brokering strategies – in this environment, business as usual is no longer an option. For those who seize the moment, there will be an opportunity to create a whole new kind of business. In this paper, we explore the trends that are reshaping the market, discover what your clients and their employees want – and examine the financial benefits for you. How remote working became a reality Telecommuting was invented in the shadow of the OPEC energy crisis, but the growth of remote working has in reality been driven by an even more precious commodity: They are busy people, juggling high-level jobs and the demands of home life. Technology has always been seen as the enabler of remote working. But changing cultural attitudes has been just as important. We have perhaps now reached a tipping point: Nearly a third say they are more productive away from the office. These cultural changes, driven by a wish for an improved work-life balance, are reshaping what companies want from their office buildings. They are given even more impact by changes in the economic landscape. Together, these trends have the power to transform the business of office space. Many experts believe so: Professor Miller argues that the global recession in put an end to cheap rent and led companies to look for significant financial savings. Further data from Deutsche Asset Management shows this trend has since continued, with office space density per worker in the US continuing to decrease between and Asia and Europe, where space is often at a greater premium than the USA, are seeing bigger changes. In cities such as London, the pressures of the residential property market and the changing balance between work and home life are reshaping the city. Office space has fallen in London for six consecutive months, the largest decline since the s. In Westminster alone, , square metres of space has been converted from offices to homes. Not every company is rushing to slash the size of their office and to encourage more remote working. Ironically, perhaps, the technology sector which has done so much to enable telecommuting has been one of the biggest proponents of the traditional office. Apple is building a new spaceship-like corporate HQ in California with , square metres of space. CEO Marissa Mayer made headlines when she banned working from home in a bid to encourage greater collaboration. But the overall trends are clear. Brokers face a future where they could be chasing fewer and fewer significant traditional office deals. Or they face investing larger amounts of time and money to secure dozens of small deals to match the value of one major deal in the past. Understanding the needs of employees Businesses also face demand from their employees to allow more flexible working, to give them the chance of a better work-life balance. Our health suffers from long commutes too, with greater distances from work associated with greater obesity, less sleep, more stress, and complaints such as neck or back pain. With employers increasingly committed to helping their staff maintain their health – not least because fewer absences and improved happiness means greater productivity – they can hardly ignore the damage done by the commute. Employees are voting with their feet, so your clients have

to respond. Simply allowing employees the opportunity to work from home rarely meets this demand, however. Companies may resist home-working because they value the collaboration which takes place between workers in the same office – but so do employees. Workers and their employers are looking for new solutions. Meet that and the threat posed by a changing property market becomes an exciting opportunity. The right space at the right time Our hyper-connected world is all about giving people what they want, just when they need it. The "just-in-time" approach revolutionised manufacturing in the s: By offering flexible workspace as well as the more traditional office solutions, you can be part of a similar revolution, where companies acquire just the space that they need, when they need it. This means your clients have the option to choose places to work at one of thousands of locations worldwide on a full-time, part-time or pay-as-you-go basis, including satellite offices in easy-to-reach locations near residential areas. For companies aiming to meet tighter-than-ever financial targets, this kind of workspace has major advantages over signing a long-term office lease: Staff forced to choose between a long commute to corporate HQ and unproductive efforts to work at home do have another option. And if their business requires them to travel, they can take their office with them, checking in at a local location. The new brokering is perhaps above all best for brokers. It also offers distinct advantages to making money from traditional office deals. This speed means a better cash flow for brokers. Fees are paid within 30 days, not over years. Flexibility is the future of the office The big corporate HQ is a now-outdated phenomenon facing the challenges of a modern business. Long-term market trends are turning against the traditional office deal. The future of brokering is selling workspace, not just offices. Offering flexible, scalable solutions as well as options for traditional long-term leases allows you to meet the needs of companies and their staff alike. Reinventing the deal can mean better cash flow and an improved bottom line. You may also like these articles.

### 4: can someone get remote access to my computer - Microsoft Community

*You buy them diapers, but they decide to pee on you during changing time. You make them gourmet pureed meals, but they're most satisfied gnawing on their boogers. You give them beautiful toys, but all they want to play with is the TV remote.*

Posted 07 March - He called them and gave them remote access to our computer. Of course it was not Microsoft he was talking to. It was a "company" called ProTekt. I came home right after the computer had to be rebooted. I immediately turned off the computer. The person he was dealing with started calling and have called a few times since but I have not picked it up. We immediately drove to a safe computer 30 min drive to reset all important account passwords. I called my credit card company and have also put a fraud alert with all credit reporting agencies. I disconnected the computer from the internet and took a look at what they did: They uninstalled my virus software and installed what appears to have been support. They also seemed to erase all my foxfire settings. Who knows what they really loaded. I had previously been dealing with some drive errors that were preventing me from creating or using restore points. This is one reason my husband fell for the scam. He knew we had been having problems. Anyway I decided to restore windows 7 to factory settings. My computer did not come with disks so I did it from the restore program. I chose the complete reformat option. I did reluctantly allow windows to install norton because I was worried about not having any protection. I have ran norton, malwarebytes and avast and the system seems clean. I reset my router passwords and set my firewall to the highest level. I am still feeling unsafe. Since windows was loaded from the computer itself could they have gotten to the restore file and put spyware on it? My understand is that it is hard to do but that they could have installed something on my MBR. Could they have gotten into my email? What could they have done in it before I managed to change the password? Should I get a whole new email account? I have not seen any unusual activity in my email except that I just got a phony email pretending to be from paypal telling me that my password and security questions had been changed. They wanted me to hit a link to get a phone number to call if I had not been the one to make the changes. Instead I went to paypal. That makes me feel that they at the very least got my email address. How concerned should I be? Should I just go get a new computer to put my mind to rest? I do not want to type any credit card numbers into the computer or log into any accounts out of fear that they will be able to see it. For example paypal suggested that I log in to my account and change my password but I do not want to so that if they can see what I am doing and will just get the new password. The credit card associated with paypal has been canceled and the attached checking account was closed long ago but I still feel uncomfortable doing anything like that. Am I being overly cautious? The protekt people have called at least two times and let the phone ring once maybe twice before hanging up. Are they trying to see if they are able to still remotely connect? Their last call was on Friday. I am sorry that this is so long. This has been very stressful few days and my husband feels like such a fool. It is such a horrible feeling. Any advice would be appreciated.

### 5: Give IT Vendors Remote Access without VPN | BOMGAR

*These tools allow you to take remote control of another person's computer so you can help them troubleshoot it while you're on the phone with them. They work similarly to Remote Desktop, but are available on all editions of Windows and are easy to set up.*

Finally, they ask you to pay them to fix that non-existent problem. Tech Support Scams To convince you that both the scammers and the problems are real, the scammers may: But there are things you can do to stop them. If You Get a Call or Pop-Up If you get an unexpected or urgent call from someone who claims to be tech support, hang up. If you get a pop-up message that tells you to call tech support, ignore it. There are legitimate pop-ups from your security software to do things like update your operating system. But do not call a number that pops up on your screen in a warning about a computer problem. Never share passwords or give control of your computer to anyone who contacts you. If You Were Scammed Get rid of malware. Update or download legitimate security software and scan your computer. Delete anything the software says is a problem. Change any passwords that you shared with someone. Change the passwords on every account that uses passwords you shared. If you paid for bogus services with a credit card, call your credit card company and ask to reverse the charges. Report it to ftc. Refund Scams If you paid for tech support services, and you later get a call about a refund, that call is probably also a scam. The refund scam works like this: Several months after a purchase, someone calls to ask if you were happy with the service. Or, the caller says the company is going out of business and giving refunds. The scammer eventually asks for your bank or credit card account number, or asks for access to your bank account to make a deposit. But instead of putting money in your account, the scammer takes money from your account. If you get a call like this, hang up, and report it:

### 6: How to Get Started with TeamViewer Remote Control

*It will give them a session ID and password that they can give to you, allowing you to easily remotely connect from your TeamViewer program. There's no setup process here – just download the appropriate program and double-click it to launch it.*

Thanks to Internet and networking technologies, companies can transact business, attract new customers and share information within the office easier than ever before. However, these technologies can cause complex problems when not maintained properly. If your business is like most, you probably have key employees to whom you turn to fix computer problems. Add an Administrator 1. Log in to Windows with an administrator account. Select the "Administrator" option and click "Create Account. After the Make Changes window opens, click "Create a Password. Click the "Create Password" button to save the new password. After the new administrator logs on to the machine, he can change the password by clicking the "Change Password" link in the Make Changes window for his user account. Grant Remote Desktop Access to an Administrator 1. Select "Local Users and Groups" in the Computer Management navigation pane, then double-click "Users" in the center pane of the window. Right-click the name of the Administrator to whom you want to grant Remote Desktop access, then click "Properties" on the pop-up menu. Click the "Member Of" tab in the Properties window, then click the "Add" button. In the text box labeled "Enter the object names to select," type "Remote Desktop Users. Windows underlines the network name of the computer along with "Remote Desktop Users. The administrator is now part of the Remote Desktop Users group and can log in to the machine remotely. Click the "OK" button to close the Properties window, then close the Computer Management console window. Add administrator accounts with remote desktop access to other computers on the network as needed. Tip If you want several administrators to have remote access to a machine, you can grant them all access at once instead of doing so one by one. Click the "Groups" folder in the Computer Management window rather than "Users. References 2 UC Berkeley: Since that time, Grundy has written many guides to using various applications that are published on numerous how-to and tutorial sites.

*We proactively support our developers, fund their learning and growth, connect them in roaming hacker houses around the world, and give them a remote environment that motivates and inspires them on a daily basis.*

What do I do now? A very common scam has people supposedly from Microsoft or your ISP or other authorities calling to help you with computer problems. Unfortunately, remote access was given. What should be done to prevent further compromise of the PC data? MS scanner and a Norton scan were done and showed no problems. Remote access software files were removed manually from PC. Could the scammer again access the PC data? Data is backed up to the external drive not plugged in at the time of the scam. Become a Patron of Ask Leo! The Scam The scam is very simple: Microsoft, your ISP or any of the other companies these scammers claim to be from are not involved in any way. And, of course, they can fix it for you. The scammer asks you to allow them to access your computer. Typically that means they have you connect to a remote access site, such as logmein. The scammer installs malware. What about those EventViewer messages? EventViewer is a mess. Or, rather, the information that is logged by applications in the system and displayed by EventViewer is a mess. Avoiding the scam Classic scam-avoidance Listen to them, if you like. The short answer is that you have no idea what they did. There are two approaches at this point: Hope for the best. And if you walk away remembering just one thing, remember this: This is an update to an article originally posted July 4, Related Posts Can an ISP remotely access my computer without my knowledge? Defender is included in Windows 8, except if you want to run it offline. MSE is a download. How do I remove ransomware? Why does my computer continually reboot? You have several ways to get your data off there and with a little bit of luck you may get you a working system again as well. July 21, in:

### 8: Git - Working with Remotes

*Frequently asked questions about the Remote Desktop clients. 07/16/; 12 minutes to read Contributors. In this article. Applies To: Windows 10, Windows , Windows Server R2, Windows Server Now that you've set up the Remote Desktop client on your device (Android, Mac, iOS, or Windows), you may have questions.*

There are a million and one remote tech support options out there. TeamViewer TeamViewer is the remote support tool of choice for many geeks. It can be used in several different ways. You can direct your partner to download the TeamViewer QuickSupport application , which can run without administrator access or any system configuration. It will give them a session ID and password that they can give to you, allowing you to easily remotely connect from your TeamViewer program. You could also opt to set up unattended access after installing the full TeamViewer client, giving you permanent remote access to the computer without the remote user having to give you any passwords or confirm anything. You can even remotely connect from an Android or iOS device. Windows Remote Assistance Windows has a built-in remote assistance feature designed for just this situation. While only Professional editions of Windows can use the remote desktop server software, every version of Windows can send a remote assistance invitation and invite someone else to assist with their computers. Read our in-depth walkthrough to Windows Remote Assistance for more information. If a solution that allows you to remotely log in without pestering the other person is ideal, set up TeamViewer or a similar program instead. To do this, both you and the other person will need to have the Chrome Remote Desktop app installed. The other person will need to open the Chrome Remote Desktop app from their new tab page and click Enable remote connections. You could also try setting up a PIN for permanent remote access. TeamViewer seems to be a better option for the average geek. You could try enabling Remote Desktop in Windows for permanent remote access, but that would require the other person have a Professional version of Windows or better â€” not too common with average users. This would also require port forwarding to make the machine accessible from the Internet. You could also set up a VNC server , which is the manual way of doing this. This is much more painful than just using one of the above solutions, which handles the connection setup itself without any messy port-forwarding. If you constantly find yourself having to perform remote tech support for the same people, you may want to get your relatives off of Windows entirely.

### 9: The impact of remote working on commercial real estate - Work US

*Give vendors access to your network without a VPN connection and enable technicians to control, monitor, and manage access to systems by privileged users.*

I started watching it probably six or seven episodes into the first run. I was aware of it because a close friend from college called me and told me I had to start watching this show. And so I did. And of course, at the time, there was no outlet for catching up on episodes that you have missed. And then of course, like everybody, I saw three out of four. There were holes for me for years that I finally went back on and ultimately caught up on. Were you writing when the show started? I had just started. The storytelling I thought was spectacular. And they were definitely the kind of stories that appealed to me. What stood out the most to you at the time? So many things, and so many things which sadly are probably very obvious about the show. I love that I at the time, interestingly, was less into the mythology episodes and more into what we would now refer to as the standalone episodes. I loved several things: I loved one week it would be really scary, and one week it would be really funny, and the next week it would just be suspenseful. That there was no template they had to satisfy, they had the guts to try different things. And clearly over time the range expanded, but it was obvious from the beginning. I loved the relationship between Mulder and Scully. I love how archetypal and simply the characters were defined; though they were deeply layered, they were so clearly the skeptic and the believer. The architecture of the show I recognized back then was just brilliant. You can hang so much on that architecture and then deepen it and then it can become self-reflective, which of course it did. Oh my God, there are so many [things]. Well, interestingly, I think they coined the term mythology. I think they made the world safe for long-form serialized storytelling—and interestingly, that was probably an aspect of the show that was less important initially and became more important as the show went on, but is still ultimately remembered as an important aspect of the show. Interestingly, for me, one of the things that made the show work, and work so well, was it really had deep themes and universal themes that they explored over time. One of them being sort of desperate loneliness and the need for human beings to try and connect and the things that stand in the way of people connecting. Which is harrowing, but I think what drove so much of the storytelling. And it also had intellectual themes, primarily among them, the theme of the unknown. And I think, for me, the lesson there is, if the show is about something at its core, you can have the wide bandwidth to tell a bunch of different stories, because the underpinning is the same. And for me, that was a huge lesson. And I think, without mischaracterizing them, a lot more of their mythology was made up as they went along. Or we knew what it was about, even if we never knew all of the details. To know all the details that early would take the fun out of the creative process for the writers. I think the point of putting together a staff of talented writers is to let them write in the style and stories that matter to them. Darin is a wonderful, wonderful man. What lessons was he able to impart on your team as you were trying to create a sci-fi show for Fox? Was that something you guys embraced initially or something you tried to shrug off? It is a totally two-sided sword. X-FILES was a cultural moment and a zeitgeist-y, relevant show like no science fiction show has been since then in its first run. So there was a ton of support for the show. Some was because of what the show specifically was, because Fox personally liked it, and was unbelievably supportive, all the way up to [Fox Chairman] Kevin Reilly. You hear horror stories of networks trying to repeat successes, to the detriment of the new shows—JP: But it tends to be a pattern. Bruce Springsteen was originally the new Bob Dylan. Which is both unfair and limiting, and also expecting things that are impossible. Was that the idea of the writers or was that suggested externally? That was an episode that J. You mean specifically that [the Fringe division] used to be the X division? Yes, we arrogantly set our show in the same universe. As someone who clearly has loved both shows, it was nice to think that maybe one day Walter might run into Mulder and Scully and completely baffle them. Yeah, we give shout-outs to all the people we love! Mulder, just because he was so fucked up. I think at some point they made it just for Halloween [reruns]. It was so self-reflective about the show, which I thought was charming and awesome. Did you have a favorite monster? Who was the cancer [man]?
