

1: Library of Virginia Using the Collections

Finding Out What's In the Collections. Find the images you want by searching our Guide to the Collections. For your convenience, the Guide brings together multiple resources in one place, organizes them around the major collection types, and allows you to research our digital collection and order online.

Luckily you can just get it by hugging the wall and pressing the interact button. Module GP This is pretty straightforward. It is one of the consoles on top of the Western Complex. Module ZN This module is near HR but much higher and inside of the cube structures high up in the air. There you will find a tunnel take the right tunnel that will lead you to the Inquest Terminal. Module XD This module is a bit tricky to get because it is covered by the black goop and if you are right on top of it, it becomes invisible so you have to rely on the interact key. It is on the platform at the top next to one of the Asura Gates. However, he will only take module per day it seems so this step is timegated and can be completed after days. Sometimes you can get IG to take 2x modules per day but not closing the conversation window after you hand in the first module and the window may refresh and allow you to hand in a second module. This collection is not timegated but it is a bit weird on what you can turn in. You can only turn in items of the same category of events i. Make sure you have Difluorite Crystals. To start off this collection, you will need to go to Researcher Thale in Sandswept Isles and purchase 21 of the Recording Devices. Each costs 5 Difluorite Crystals for a total of Difluorite Crystals. Then you need to do 21 events with these Recording Devices, each event consuming one. To get this event to spawn, you will need to go to the bottom level of the academy and then kill all the underworld creatures until the Djinn spawns. The event you need to do is Kill Gatekeepers and take their keys to free hostages. This is tied to the event to free Subject S. This event starts at middle of Rata Primus near the body of water. There will be an Escaped Test Subject you can talk to to start the event. This event is frequently bugged so you may need to wait for a non-bugged version to complete the collection. The event you need to do is the group event Free Emara and the other prisoners. It has a pre-event: You will need to do the event Stop the Mordant Graveraiser from defiling graves to raise new Awakened in Elon Riverlands. The event starts with Agent Zula in the marked location. Refugee Healing Recording Make a recording of you healing the injured refugees at the Temple of Kormir. Do the heart at Temple of Kormir in Crystal Oasis and there you can aid the injured refugees. Medical Aid Recording Make a recording of you reviving ten fallen allies. Otherwise you can just rez other players. Fisher Recording Make a recording of you collecting fish for the Olmakhan. There is a fishing event that spawns just SE of the Olmakhan village. Do the event by Kusini Crossing in Crystal Oasis: See the refugees safely through to Amnoon. Swindler Recording Make a recording of you stopping swindlers from cheating the people of First Camp. Help Flint deal with the swindlers in First Camp. Grave Defense Recording Make a recording of you defending the village of Kwell. Do the event in Crystal Oasis to defend the village north of Temple of Kormir: Defend the village of Kwell from the Forged. Olmakhan Defense Recording Make a recording of you defending Atholma from the storm. You need to do the Gathering Storm meta event in Sandswept Isles which finishes with you defeating Zohaqaan. You need to do the event chain in the Necropolis in The Domain of Vabbi where you fight Awakened judges and protect Elonians. Villager Defense Recording Make a recording of you defending the captured villagers in the Bonestrand. For this you have to do the event at the Awakened Garrison: Burglar Recording Make a recording of you stopping a caffeinated skritt burglar. This event occurs all over the 5 PoF maps so you may need to run around until you find this event. This event starts at top of Brightwater Inlet in Desert Highlands. Extortion Recording Make a recording of you stopping the Awakened collectors at the Arid Gladefields. You need to do the event Stop the Awakened collectors from harassing the exiles at Arid Gladefields in Elon Riverlands.

2: Guide to the library collection | CCA

Collection highlights include vital records, census, and city directories. Records pertaining to the administration of criminal justice, dating from to , constitute the largest and most comprehensive collection of such material in the English-speaking world.

Of all the collection types in Java, the list is arguably the most popular due to its ordered characteristics, allowing developers to insert and retrieve elements at a specified index and to sort elements according to specified criteria. Also note that while this article uses notation and illustrations that are normally associated with linked lists such as previous and next relationships , not all lists are implemented as linked lists; some lists may internally use arrays while others are free to use whichever internal implementation is most suited for the task at hand. Before diving into the technical aspects of a Java list, we must first define what a list is and the problem it is intended to solve. The Concept of a List A list is simply a collection with ordered elements. By ordering each element, a sequence of elements is created, allowing clients to insert, update, access, or remove an element at a specific index. This concept is illustrated in the figure below: The indices of a list are 0-indexed, ranging from 0 to $n - 1$, where n is the size of the list. Therefore, the element at the first location in the list, or head, has an index of 0 while the element at the last location in the list, or tail, has an index of $n - 1$. Due to this indexing, new semantics are introduced in lists that are not available in general collections: Unlike the general iterator, which is unidirectional advances only in the forward, or next, direction , this list-based iterator allows for bidirectional traversal, adding a concept of a previous element. In general, sorting is performed in two ways: While this algorithm suffices for most list implementations, some implementations perform optimizations based on the internal data structure used to represent its sequence of elements. Lastly, the lists can also replace each element in-place using a transformation function, where the input type and the output type of the transform are the same: Before delving into the functionality particular to lists, we will first examine the complete List interface, including the functionality inherited from the Collection interface. Any elements present in the list at the index or greater will have their indices incremented by the number of elements added from the supplied collection. The number of added elements may not be the same as the size of the supplied collection, if, for example, the list does not allow for duplicates and one or more of the elements in the supplied collection are duplicates. For example, if the list contains 3 elements indices 0 through 2 and a collection of 3 unique elements is added at index 1, the indices of the existing elements will be shifted as illustrated in the following figure: The default implementation for this method is defined as follows for JDK 9: The first parameter is less than the second Zero: The first parameter is equal to the second Positive: The first parameter is greater than the second Although any positive or negative integer can be returned, the convention used throughout Java is to return -1 if the first parameter is less than the second and return 1 if the first parameter is greater than the second. The first parameter belongs before the second Zero: This interface is defined in JDK 9 as the following: All existing elements in the list after the supplied index will have their indices incremented by one, as illustrated in the figure below. If an index of 0 is supplied, the added element becomes the head of the list; if an index equal to the size of the list is supplied, the added element becomes the tail of the list. This process is illustrated in the figure below. If the supplied index is 0, the head of the list is removed; if the supplied index is equal to the size of the list minus 1, the tail of the list is removed. If no matching element is found, -1 is returned. This concept depicting the possible location of the cursor is illustrated in the following figure. When the cursor is positioned before the head of the list, its next is the head of the list and it has no previous. When the cursor is positioned after the tail of the list, it has no next and its previous is the tail of the list. In addition to traversal methods, ListIterators also have optional operations to add, set, and remove an element at the given cursor location. For example, if the cursor is positioned at the head of the list and next is called moving the cursor between the head of the list and the element at index 1 , calling set would result in the head of the list being replaced with the supplied element. Likewise, if the cursor is between the elements at index 1 and 2 and previous is called, calling set would replace the element at index 1 with the supplied element. For example, the following code can be used to

decide which access algorithm is more effective: For more information, see the official `ArrayList` documentation. `LinkedList` A `LinkedList` is a doubly linked list that allows for bidirectional traversal of the elements in the list. This internal doubly link representation is based on the private static `Node` class, which includes a data field called an item of the type of the elements in the `LinkedList` matching the type of the formal generic parameter of the `LinkedList`, a previous link, and a next link, as illustrated in the listing below. This implementation should be used if elements are frequently added to the head of the list or if an iterator is used to delete elements far from the head or the tail of the list, as these operations are performed in constant time as compared to the linear time of an `ArrayList`.

3: Guide to the Collections | Performing arts: theatre, film, and television | Amherst College

Guide to the Collections The web version is regularly updated to incorporate new acquisitions but does not include materials which are in process and unavailable for use. The printed guide () is no longer available for purchase.

While most of the music in the collection was written for standard jazz ensemble, many pieces were written for a smaller jazz ensemble or for a jazz ensemble with additional orchestral instruments. M4A 4, 6 linear feet The collection contains imprints of the Art Publication Society "scores, and also materials relating to music pedagogy. The imprints were donated by Hiram Watson Sibley, who provided financial support to the group. The bulk of the manuscripts consists of songs for voice and piano, and the composition text materials are sketches and entries Barthe used for a composition contest in The material is of interest to the study of nineteenth-century French opera and especially art song as practiced by a minor but respected composer. For purposes of preservation and ease of access, Dr. In addition, RTWSC houses the various sketches, manuscripts, and other documents deemed to be of archival significance. The Ensembles Library of the Eastman School of Music houses the performing materials scores and parts that had been generated from the Ozalid masters of the larger-scale instrumental and choral works specifically, those scored for eight or more parts. Those performing materials are available by addressing directly the staff of the Ensembles Library. Owing to the circumstance that so few of the compositions were published, Dr. Barlow was obliged in most instances to assume personal oversight of the storage and distribution of the performing materials of his works. Barlow following performance use. Includes an inventory of signatories. M3B 3,6 " 4, Physical extent: Benson made an initial gift of papers in the fall of ; further papers will be received in the fall of There are no restrictions on the use of the collection other than those imposed by the provisions of the U. Copyright Law and its revisions. C3B 5,6 " 6,5 Physical extent: In addition, other institutions hold material relevant to Mr. The Library of Congress is the primary repository of his music manuscripts. Box 14 of the given collection holds relevant correspondence regarding Mr. The materials date from ca. He hand-copied many of the latter for posterity and use. The most significant items are the essay by Ernest Bacon on Bloch as a teacher and the correspondence, from among which the letter by Suzanne Bloch is most interesting. Enid Knapp Botsford was the originator and organizer of the Eastman Theatre Ballet in , which was housed in the facilities of the Eastman School. It is representative of the tastes of the era and includes a typical selection of a variety of vocal and instrumental music. An area of particular interest is the period of World War I and the s. Piano rags and dances are also prominent. Burke regularly stopped on her way home from school and work. Buxton served on the faculty of Stetson University. The composers of the cadenzas include many first rank and historically important virtuosos of the time. The collection will be particularly useful for the historical study of violin performance practice during the late nineteenth century. M4B 2,1 1 linear feet A small collection of miscellaneous music books for children, dating from the late nineteenth and the early twentieth centuries. The collection was apparently compiled by the Sibley Music Library staff from gifts to the Library. Copthorne, who was also a vocalist and pianist, was active in the musical life of Chicago from the s through the early s. Copthorne set to music. Two highlights of her career were her White House performance before First Lady Eleanor Roosevelt, and her composition studies under Nadia Boulanger in The scores in the collection are identified by type: Also included are some of his publications and genealogical material relating to the Cringan family. A number of them are annotated by the composer with corrections and marginal remarks; in addition, the collection includes many first and early editions. C3B 12, 10 linear feet The Robert Delaney Collection comprises the extant personal and professional papers of the composer and teacher Robert Delaney.

4: Debt Collection FAQs | Consumer Information

Introduction. Collections are a very important part of VBA. If you have used the language for any length of time then you will have used Collections.

Fr Guide to the library collection Our library is dedicated to the literature of architecture in its broadest sense, including its professional history, its formal and theoretical elements, and its relationship to the main intellectual currents. This comprehensive approach seeks to document the history of architectural discourse, to promote scholarship and research in architectural history and theory, and to support work of other media within the collection. One of its early special subject areas was that of early architectural treatises. Documenting the beginning of the modern tradition of enlightened debate about architecture, these Renaissance treatises comprise a collection of international importance. Supporting this material is a large body of Italian regional histories and city guides dating from the beginning of printing into the 19th century. Particular interest has been paid to the architectural literature of the countries whose culture has contributed to the formation of Canadian culture: There is an important collection of British country house guides of the 18th and 19th centuries, as well as literature of the English Gothic Revival. There are strong imprints from Germany and The Netherlands, and significant strengths in Eastern European holdings, especially books and periodicals on architecture published in the former Soviet Union. General Collections Canadian Architecture and Urbanism Comprising over 12, titles - more than half from the past four decades - the collection coverage is intended to be comprehensive and focused on Canadian architecture with emphasis on historic buildings and landmarks, Canadian architects, and architectural firms. The scope includes general histories of localities, businesses, and institutions. Formats are interesting and varied: Additionally, two special collections are worth mentioning: United States Architecture and Urbanism There is a comprehensive coverage of architecture throughout the United States from colonial times to the present. The core of the collection is supplemented by city guides, view books, and other contemporary witnesses to the built environment. Other strengths include late 19th and 20th century building types and materials - the latter complemented by special collections of trade catalogues and international expositions. Excellent coverage of American architects and architectural firms, including Frank Lloyd Wright see C. The collection has a particular emphasis on North American Modernism and its aftermath, with recognition of the interdisciplinary nature of many avant-garde theories and good coverage of city planning and urban renewal, in particular housing. Also, it has extensive holdings on the history of photography in America. The collection covers all aspects of architecture, urban planning and landscape design, as well as all styles and periods. It includes virtually all of the early printed architectural treatises, often both the first and subsequent editions. Renaissance holdings range from pocket manuals to large illustrated books. Literature of the history and development of building types is complemented by treatises on the use of building materials. Monographs by and about architects are supported by documents relating to the history of architectural education, with strong holdings of exhibition catalogues and theses. Topographical literature is well represented, with emphasis on early guidebooks and view books as sources for the study of urban planning, landscape gardening, and techniques of architectural representation. European imprints on subjects such as draughtsmanship, engineering, ornament, and perspective complement other monographic collections support broad-based research. All countries and languages are included, with France, Germany, Great Britain, Italy, and the Netherlands particularly well represented for all periods. The material is particularly strong in Soviet architecture, architectural history, urban and regional planning, architectural education, and housing. There are also solid holdings for Eastern Europe and Armenia. Holdings from Other Regions Holdings for countries outside of North America and Europe consist mainly of recent monographs. Earlier imprints are more selective and largely confined to colonial architecture in India, Central and South America, and the work of Western practices in the Middle East and elsewhere. Strengths include contemporary architecture from Japan, China, and Korea, as well as temple architecture of early Modern India and urban development in Latin America. Reference Collection It comprises over 6, titles including standard and specialised works of reference. Standard research tools, such as general and specialised encyclopaedias,

indexes, and national biographical dictionaries are available in the Reading Room, as well as standard and specialised electronic reference resources. Approximately half the reference titles relate specifically to architecture, including over 1, bibliographies and over dictionaries of terminology - many of which are early works and architectural guides for most major cities. Other strengths include reference works on art, gardens, and the history of the book. Access to important collections of drawings e. The Conway Library; History of Photography collection of periodicals, etc. It comprises over 2, files on individual architects and many architecture-related subjects covered in the popular press. Scholars Library The archive of Spiro Kostof covers the period , and is comprised of files generated from his activities as an architectural historian and Professor of Architectural History at the University of California, Berkeley. They include lecture notes and student papers from courses taught at Berkeley and Yale, talks given at various national and international venues, and correspondence and research materials related to various publications, as well as unpublished amateur recordings of lectures for courses at Berkeley in and While the Library does not generally purchase the libraries or archives of scholars, offers such as Kostof are accepted based on their research value in relation to our holdings. Special Collections Renaissance Treatises The collection holds editions of Alberti, Palladio, Scamozzi, Serlio, Vignola, and Vitruvius and aims to be comprehensive in tracing the history of these texts from the 15th century onwards. Trissino Collection of Books on Italy The collection includes over 2, titles - starting in the 15th century - on Italian art and architecture. It was originally formed by Count Leonardo Trissino and further expanded by his descendants. The collection consists mostly of regional histories and cultural guides to individual towns and cities, with especially good coverage of northern Italy Friuli, Veneto, Lombardia, Piemonte, Liguria, Emilia Romagna. It also includes biographical monographs and first editions of major Italian treatises on art by Alberti, Borghini, Lomazzo, and others. Festival Books A selection of 75 printed books illustrating the temporary buildings and ephemeral decorations erected for special events such as royal births, weddings, and funerals. It includes four unpublished manuscripts. Harris Collection of British Country House Guides Approximately early printed books on British country houses, offering primary evidence of the architecture, gardens, and interior decoration of residential castles, palaces, and villas. The earliest item is a suite of 13 late 17th century views of Audley End in Essex; the latest, one of thirty copies of a guide to Poundisford Park, Somerset. The collection has strong holdings on Blenheim Palace, Fonthill, Stowe and Wilton, and representative guides to less famous houses; including two manuscripts and numerous unique association copies. International Expositions and Fairs Over 1, items generated in connection with fifty different international expositions - from the Paris exhibition to the present day. Over other fairs of various types are also represented. The collection includes printed materials and souvenir artefacts. Trade Catalogues Over 5, trade catalogues documenting building technology and construction methods from the late 18th century to the present. The core of the collection was formed through acquisition of the relevant portions of the Franklin Institute trade catalogue collection. Coverage is broad and includes such categories as concrete and lumber, metalwork and woodwork, flooring, heating and insulation, plumbing and electricity, windows and roofing. Theatre Collection Over 1, titles relating to the theatre some 30 dated before , of which about half is related to the architecture of theatres e. Comprised of about 75 monographs and ephemera documenting stage design and theatre history in Italy, France, Germany, and England, from the 17th through 20th century, it includes ephemeral documents " engravings, photographs, broadsides, cuttings " which focus on London theatres. Original prints and drawings are housed in the Prints and Drawings collection. It contains approximately 1, books, 1, periodical issues, and 1, ephemeral items that include posters, audio-visual material, clippings, postcards, stationery, and memorabilia. Almost all significant titles by and about Frank Lloyd Wright are included and date from the early decades of the century to the mid s. In addition, it includes all editions and printings of the major titles and all foreign-language editions. The collection holds most major architecture, design, and other serial publications, with coverage of Frank Lloyd Wright, issued between the turn of the century and the present decade. Ephemeral items are both historical and current posters and memorabilia. Stevens Collection of Library Architecture A collection of materials - dating from the late 19th century to mid 20th century - documenting the library as a building type. It is composed of approximately 25, postcards depicting libraries around the world, with over items of ceramic ware printed with images of library

architecture, as well as similar items in metal ware, glassware, and treen ware. Also includes 38 commemorative medals depicting libraries; over books and pamphlets on library history; and other miscellaneous items such as wood miniatures and souvenir pins. Vastu Shastra Publications A unique reference collection of retrospective and current vastu shastra literature on Indian temple architecture, iconography and city-planning, in original or critical editions in Sanskrit and other languages, and modern translations in Hindi, English, and other Indian and European languages. Research Reports from the Bureau de la Recherche Architecturale et Urbaine BRAU in Paris Over unpublished research papers and reports on architecture, urbanism, and city planning in France commissioned from the French schools of architecture by the Bureau de la Recherche Architecturale et Urbaine from to Architectural Competitions Close to briefs of international competitions for architecture, landscape architecture, and city planning. Systematically developed between and , the collection includes some documents relating to results as well as exhibition catalogues and other publications resulting from competitions. The ensemble Includes Jahrbuchs, reports, bulletins, and other documents issued by associations, universities, corporations, and governments. Rich in journals of the avant-garde. Strong in national and regional journals and those published by schools of architecture, as well as those focused on architectural theory and architectural research. Selected titles in the fields of art, archaeology, history, and iconography enrich the interdisciplinary research potential of the collection. American holdings comprise all scholarly titles devoted to architecture, landscape design, and urban planning, including those which derive from membership in major scholarly associations. Also includes titles produced by students of architecture and landscape design in American universities. Good coverage of retrospective and current annual reports, professional journals, national and regional journals, and architectural research journals. European serial holdings include all countries and languages and all periods. They contain an extensive collection of 19th century engineering and construction journals with information on inventions, bridges, construction, and industry. Important 19th century German, French and British titles can be found here. Many rare titles document the major movements of the 20th century architecture, from both Eastern and Western Europe and including Soviet publications.

5: Guide to the Special Collections – Sibley Music Library - Eastman School of Music

*The AAM Guide to Collections Planning [James B. Gardner, Elizabeth E. Merritt] on www.enganchecubano.com *FREE* shipping on qualifying offers. Every museum should have a clear vision of what it aspires to be, but it may never reach its goal if it can't shape and develop its collections as a whole.*

Neater The For Each loop is neater to write especially if you are using nested loops. Compare the following loops. Both print the names of all the worksheets in open workbooks. Order The order of the For Each loop is always from the lowest index to the highest. If you want to get a different order then you need to use the For Loop. The order of the For Loop can be changed. You can read the items in reverse. You can read a section of the items or you can read every second item. Count To 1 Step -1 Debug. Count Step 2 Debug. Add coll lTempHi , After: Add "Ireland" QuickSort coll, 1, coll. We will look at them in turn. It will print all the elements of ANY collection. The size or type of element does not matter. This shows how flexible collections are to use. For a simple variable passing by value means a copy is created. In the following example, we pass total using both ByVal and ByRef. You can see that after we pass using ByRef the value has changed in the calling procedure. If you add or remove item then the collection in the original caller will also be changed. Remove 1 End Sub The reason for this is that a Collection variable contains a pointer. This means it contains the address of the collection rather than the actual collection. So when you add or remove an item you are changing what the pointer is pointing at and not the pointer itself. However if you change the pointer it will be changed outside of the sub. All you need to know is how this affects the behaviour of passing a parameter. If you set a collection parameter to nothing then the behaviour depends on if you used ByRef or ByVal. You need to use the Set keyword. We do not use New keyword here to create the collection. This is because the collection is created in CreateCollection. When you return the collection you are simply assigning the collection variable to point to this collection. Conclusion Collections are a very useful part of VBA. There are much easier to use than Arrays and are very useful when you are doing a lot of adding and removing items. They have only four properties: Add, Remove, Count and Item. This makes them very easy to master. The items do not have to be of the same type but they normally are. The VBA Sheets collection can contain both worksheets and chart sheets. A collection makes it easy to perform the same task on multiple items e. Collections are similar to arrays as they both store groups of similar items. Collections are better when adding and removing lots of items. Collections are simpler to use than arrays. Basic data types i. What this does depends on how it was created see last point. You can use Keys with a collection to access an item directly. You can use the For and For Each loops to access all items in a collection. The For Each loop is more efficient but only allows you to go through the collection in one order. You can easily pass a collection as an argument to a Function or Sub. Get full access to the Excel VBA training webinars and all the tutorials. Planning to build or manage a VBA Application? Learn how to build 10 Excel VBA applications from scratch. Get the Free eBook Please feel free to subscribe to my newsletter and get exclusive VBA content that you cannot find here on the blog, as well as free access to my eBook, How to Ace the 21 Most Common Questions in VBA which is full of examples you can use in your own code.

6: Guide to the Collections - Records

Clojure's collections are central to Clojure programming. While in most languages, you might find collections somewhere in the standard library, in Clojure, they are front and center.

Produce a stream of its elements The Collection Interface As expected, Java captures these responsibilities in the Collection interface, which is parameterized with a formal generic parameter, E, that represents the type of its elements. JDK 9 defines this interface as follows: Thus, in order to query the number of elements in a collection, we must call the size method. If a is null, a is contained in the collection if there exists at least one null element in the collection. It is left to the implementation to decide how to test for equality. Optimizations may be made, depending on the nature of the collection. This method utilizes the for-each loop formally called the enhanced for loop, which is a syntactic optimization that allows a for loop to be condensed for any iterable object: The last method creates a Spliterator, which can partition a collection and facilitates iteration over these partitions. Spliterators are a complex topic and are closely related with parallelism in the collections framework, and are therefore not covered in this article. A Quick Introduction to Parallelism and the Spliterator for more information. In general, it is not permissible to iterate over a collection using an enhanced for loop and remove an element from the collection in the body of the for loop. This results in a ConcurrentModificationException being thrown. For example, the following results in a ConcurrentModificationException: For more information, consult the Iterator documentation and the Oracle Collection Interface documentation. This method is a non-generic method and the type of the elements in the array do not reflect the type of the elements, as specified by the formal generic parameter for the collection. Thus, the array returned by this method is an array of objects with the same type as the formal generic parameter of the collection. Due to type erasure of generics in Java, the type of the formal generic parameter is inaccessible at run-time, and therefore, creating an array at run-time with the same type as the elements is not feasible. Thus, the caller is responsible for providing the type of array at run-time in the form of an array of the element type. If the provided array has a size equal to or greater than the size of the collection, the supplied array is filled with the elements of the collection and the element directly following the last element of the collection is set to null if the length of the array minus the size of the collection is greater than or equal to 1. If the length of the supplied array is less than the size of the collection, a new array is returned with a length that matches the size of the collection and the type of the supplied array. For example, a call to this parameterized method would resemble the following: For example, some implementations may not accept duplicate values. If an element is removed, this method returns true. The implementation of this method is as follows: Upon completion of this method, the collection is considered empty. The default implementation of this method is as follows: This API introduces functional programming semantics to Java collections, treating collections as a stream of data that can be mapped, filtered, reduced, etc. The curious reader can find more information at the Stream class documentation. Implicit Rules While most of the rules regarding collection implementations are checked at compile-time with language constructs, some rules are extra-linguistic. Of these other collection types, three stand out in their ascendancy: As we will see in the following articles in this series, these three concepts cover most of the use cases for collections. This hierarchy is illustrated in the figure below, with green boxes representing interfaces, blue boxes representing abstract classes, and purple boxes representing groups of concrete implementations. Note that an excellent interactive depiction of the collections hierarchy can be found on Falkhausen. As we will see in future articles, each of these collection types introduces their own constraints and restrictions that allow them to more precisely define the behavior of a collection. We will cover this feature, and all of the other idiosyncrasies of lists in the next article in this series. Download the free trial. Read More From DZone.

7: GW2 Roller Beetle Mount Unlock and Collections Guide - Dulfy

Existing Collection Strengths: Amherst College was the first American institution of higher education to grant a degree to a Japanese citizen, and the ties between the College and Asia are long-standing and significant.

There is no gold sink other than 3 collections you have to do that can take a few hours to complete. It is a fast mount, capable of traversing over terrain in a short amount of time by using the boost spacebar. Getting Started Completing Forearmed is Forewarned story instance You must have completed thie Forearmed is Forewarned story instance to unlock the High Roller achievement that allow you to talk to Gorrik at Domain of Kourna. Go straight to Gorrik. Find Gorrik He is just north of Allied Encampment waypoint. This will complete the High Roller achievement and unlock the Bettle Juice achievement. You will need to collect 9 Secret Stashes. Unlabeled Bottle of Bubbling Liquid 2. Flask of Churning Liquid 5. Bottle of Dark Smoke 8. Lightning in a Bottle 9. Interact with one of the Lab Terminals on the top floor of the lab inside Dabiji Hollows. Bounty board is in the Allied Encampment area. Steam Power Coupling Harvested from steam creatures. Plagued Struts Dropped by golems in the Domain of Kourna. Use a Ley-Infused Lodestone to see which map it will spawn on 7. Return to Blish Talk to Blish who is next to Gorrik and then talk to the Beetle to complete the collection. Beetle Feed Collection 1. These event occurs near the Front Line area. It is an event where you use your mount to run over Scarab mounds. This is the last step of Containing the Scarab Plague meta event in Kourna. Do the meta event and proceed all the way into the Moon Fortress. You will defeat the big golem boss and then have to destroy 11 of the Plague Experiments. Killing any one of these experiments will give you the item. Junundu Ichor Drops from junundu wurms in the Crystal Desert. You can find Junundu wurms in the sulfur area of The Desolation. Fighting them can be a bit annoying due to the damage from the ground but there are rocks you can stand on and range them. To get to Far Silverwastes, take these Skritt tunnels. Alpha Beetle spawns in the left corner of the Far Silverwastes. Note that sometimes the Beetle can also spawn on the top left corner so be vigilant as the beetle has very little HP and dies quickly. Desert Luciferin Purchased from the heket in the Domain of Kourna. You need to complete the heart and then purchase it for 50 Inscribed Shards, the currency for this map. Kourna caches on the map will give you 1 each, each heart vendor will give you 5x per day and then you can get some for doing the meta or doing the Kourna dailies. To find Cave Wurms, you will need to go deep underneath Ntouka Pond. There is a sand portal you can enter with your jackal at the arrow location on the map. This will take you to the pond. Once inside, swim down towards the Deeprift Brood POI and you will see some wurms along the way you can kill. Return to Petey Petey is right by Gorrick. Congrats on your new Roller Beetle mount!

8: Guide to the Collections | Asian Studies | Amherst College

Special Collections houses a wealth of materials relating to all aspects of agricultural history, discovery, and advancement. The combination of over 15, rare books, manuscript collections, original art work, posters, photographs, and nursery and seed trade catalogs makes Special Collections a premiere center for agricultural research.

What types of debts are covered? Your credit card debt, auto loans, medical bills, student loans, mortgage, and other household debts are covered. Business debts are not. Can debt collectors contact me any time or any place? How can a debt collector contact me? Debt collectors can call you, or send letters, emails, or text messages to collect a debt. How can I stop a debt collector from contacting me? Send a letter by mail asking for contact to stop make yourself a copy before you do. Once the collector gets your letter, it can only contact you to confirm it will stop contacting you, or to tell you a specific action, like filing a lawsuit, will be taken. If you are represented by an attorney, and inform the collector, the collector must communicate with your attorney, not you, unless the attorney fails to respond within a reasonable period of time to the communication from the debt collector. If it is your debt, you can find out from the collector more information about it. Can a debt collector contact anyone else about my debt? If an attorney is representing you, the debt collector has to contact the attorney. What does the debt collector have to tell me about the debt? The notice has to say: If you send the letter within 30 days of getting the validation notice, the collector has to send you written verification of the debt, like a copy of a bill for the amount you owe, before it can start trying to collect the debt again. You also can get a collector to stop contacting you, at any time, by sending a letter by mail asking for contact to stop. What are debt collectors not allowed to do? If a debt collector is trying to collect more than one debt from you, it must apply any payment you make to the debt you choose. What should I do if a debt collector sues me? If a debt collector files a lawsuit against you to collect a debt, respond, either personally or through your attorney, by the date specified in the court papers. That will preserve your rights. Can a debt collector take money from my paycheck? Yes, but the collector must first sue you to get a court order called a garnishment that says it can take money from your paycheck to pay your debts. A collector also can seek a court order to take money from your bank account. Can my federal benefits be garnished? Many federal benefits are generally exempt from garnishment, though they might still be garnished to pay delinquent taxes, alimony, child support, or student loans. States have their own laws about which state benefits can be garnished. What if my debt is old? Debt collectors have a certain number of years they can sue you and win to collect a debt. How long the statute of limitations on a debt lasts depends on what kind of debt it is, and the law in your state or the state specified in your credit contract. Also, under the laws of some states, if you make a payment or provide written acknowledgment of your debt, the clock may start ticking again. Can a debt collector contact me about a time-barred debt? Ask the collector when its records show you made your last payment. You also can send the collector a letter within 30 days of receiving a written notice of the debt. A collector must stop trying to collect until it gives you verification. Does a time-barred debt stay on my credit report? The statute of limitations for a debt is usually different from the reporting period for a debt on your credit report. In general, negative information stays on your credit report for seven years. Consider talking to an attorney before you decide. Make a partial payment. The collector might be able to sue you to collect the full amount of the debt, which may include extra interest and fees. Pay off the debt. Some collectors will accept less than what you owe to settle a debt. Also keep a record of the payments you make to pay off the debt. You still need to respond. Consider talking to an attorney. If you ignore a lawsuit, the collector could get a court judgment and garnishment against you. Tell the judge the debt is time-barred, and show a copy of the verification notice from the collector or any information that shows the date of your last payment. Where do I report a debt collector for an alleged violation? Report any problems you have with a debt collector to:
