In this posts, I'll share the essential details about the PDF Document and How to Edit the PDF Files without Adobe Acrobat. Why edit a PDF? Many of us have encountered situations where PDF files needed to be edited, for different reasons. This is a very tricky process and one may easily destroy a document in the process of editing PDF files.

Everyone, from business owners and educators to government personnel use the PDF file to transmit large documents. Why edit a PDF? Many of us have encountered situations where PDF files needed to be edited, for different reasons. This is a very tricky process and one may easily destroy a document in the process of editing PDF files. PDF files are an accurate representation of a document. They are meant for output or on-screen viewing. They are not intended to be intermediate files that can still be edited. But what if the PDF file contains grammar and spelling mistakes? Such a document simply cannot represent your business and needs to be edited. Whenever possible, try to make the changes in the Word file, and recreate the PDF from it. This means that it cannot be altered from what you see on the computer screen. To alter it, you will need the original password. Well, the PDF file format is basically just a snapshot, or a graphic portrayal of text. Although you might think of it as text, it is not. However, this is not too great for people who need to copy and paste a part of the PDF into a Word document or edit the PDF in any way. On line PDF editors: With PDF Escape, you can just place the parts of a PDF file using the whiteout tool or add annotations with the help of custom shapes, arrows, text boxes and sticky notes. But if the document includes images, charts, tables and other complex formatting, try the online PDF to Word converter from BCL Research or the one from NitroPDF – the former offers instant conversion while the latter service can take up to a day though its yields more accurate results. The tool can also be used for encrypting PDF documents such that only users who know the password can read the contents of your PDF files. This refers to stuff like replacing images on a PDF file, adding signatures, removing blocks of text without breaking the flow of the document, etc. Then you have Inkscape , a free vector drawing tool like Adobe Illustrator that can natively import and export PDF content. OpenOffice Draw supports inline editing. So, you can easily fix typos in a PDF document or make formatting related changes like replacing color, increasing or decreasing the text size, replacing the default font-family, etc. Like Inkscape, the OpenOffice toolbox also includes support for annotations, shapes, images, tables, charts, etc. But here you have more choices and the software also looks less complex. You can also scan a document and run the OCR software to extract the text directly to a Word file. Although it is fast, it has some drawbacks. To make an almost error free transition between PDF and DOC, you need a very good converter, that can cost lots of money. Type in your email address for Step 3 and click Convert.

Adobe InDesign is the most popular page layout program available in the world today and is the default application used in the production of magazines, brochures, newspapers, and large format display. Each Adobe InDesign document requires the fonts that were used to create it to allow it to be editable and rendered for printing and export. Adobe InDesign makes this easy. This folder can also contain a document, which can be created by the InDesign user with instructions. This can contain any notes from the creator and gives a full inventory of the history of the document, technical specifications and sizes as well as fonts, images used and the print settings that have been selected. Adobe InDesign documents are easily recognizable by their magenta color with the Id logo and carry the suffix. If an InDesign document has been created as a template it will have the suffix. There can also be some compatibility issues regarding features that have been created in newer versions of InDesign when opening a document with an older version of the application. Adobe has done a good job of making InDesign backward compatible, but some of these new features may not work when opening the document in an older version of the application. Sometimes these plugins may be required to edit features that are not a core part of the InDesign application. If you received an InDesign package with the Instructions. Some plugins are free, though many are now valuable pieces of software, which carry a license fee. These will show margins, and columns in the grid of the page. By toggling the W key, you can show or hide these guides. InDesign has a few main objects, which allows design to be created Text boxes – these can be single or multi-column and can contain text of multiple sizes and styles. To edit a text box, just double click with the black pointer and it will highlight the text. The pointer will turn to a text icon and you can choose which part of the text you want to edit. Lines, vector drawing tools can be used to create shapes and rules. All of these elements can be colored using the color palette. You can choose a separate color for the frame or inside fill of a box or other elements. InDesign has very sophisticated tools for frames and lines. Tweak has created an Adobe InDesign plugin, which allows users to upload their Adobe InDesign documents – and their related fonts and images to Tweak Cloud. You can try PDF Expert if you work on Mac. It's fast, easy to use, and has many features to edit PDFs. PDF Expert allows you to edit text in a PDF file, add, delete, or reorder pages, fill out forms, manage images in your document, sign PDFs, etc.

This is done pretty easily using the built-in tools in Acrobat. I will take you through editing field properties using the Fields area of the Forms task pane, duplicating fields, aligning, and more. NOTE As described earlier, editing form fields needs to take place in form editing mode, which you can enter by clicking Edit in the Forms task pane on the right side of the workspace. With the PDF in form editing mode, take a look at the Fields area of the Forms task pane on the right. All of the form fields in this PDF are listed here, sorted by which page they are on. Notice that the field is selected on the page as well. Click the field name again, and you will be able to change the name of the field. With the field selected on the page, position the pointer over the field, and begin dragging it down. Release the mouse, and then the keys. Ctrl or Option copies the field, and Shift constrains the movement to vertical in this case. To change the name of the new field, click the field name in the Fields area of the Forms task pane twice slowly and change the name. Figure 12 Create a copy of a field TIP To create a series of fields more than just a single copy of the same size and shape, you can create one field, select it, then right-click Windows or Ctrl-click Mac OS the field and choose Place Multiple Fields to create copies of the field. The next step is to align, size, and distribute form fields: Create a new field somewhere on the page any type of field. Create another of the same type of field, elsewhere on the page. With one of the fields selected, Shift-click the other field to select both. TIP To select multiple fields, you can also click and drag across them. Notice that the last selected field is dark blue. That means, if you align the selected fields, or change sizes, they will align to the dark blue field or be the same size as the dark blue field. In the next step, you will resize the fields to match one of them. This makes the width and height of both fields the same. Figure 13 Match field sizes With both fields still selected, right-click Windows or Ctrl-click Mac OS on the field that you want to align the other field to. Centering fields centers them relative to the page. The Distribute options will only appear when more than two fields are selected and allow you to ensure the distance between the fields is the same. You can access the field properties from here as well. Why would you go to the Forms task pane to access field properties when you can do it on the page like you saw earlier?
