

## 1: How to Plan a Homework Schedule (with Pictures) - wikiHow

*Our plan for next year is arranged with the months on top (two pages for the whole year) and the strands down the side. There is one for ELA, one for Math, and a map for Social Studies / Science / Holidays / Assessments.*

Share via Email New teachers first term tips: The late nights, the early mornings, the tears, the tantrums, the weird school politics you have to get used to for each placement. Hopefully by now you have a job, or at least some interviews lined up. The more you know now, the better. So, things to think about when visiting your school: You could also try grabbing some textbooks and copies of the syllabus too. They are all integral to the school and can be amazing help in your first year. They also know all the gossip. Teachers that wander around asking kids the way are more than likely targets for practical jokes. What is the behaviour policy and how will I deal with mobile phones, outdoor wear being worn in the classroom and so on? This means giving thought to assessment for learning techniques and thinking about the crucial feedback mechanisms you will put in place. That sounds like an awful lot to think about but even if you just go through the process of what you are doing in your head, it can help to prepare you for your first term in advance. Remember, you are going to have your own classes and this means you can finally put your own stamp on your classroom and teaching practice. You have already made it through a really tough course of study and so you are perfectly capable of the challenges in front of you. The only thing left to consider is this: My tutor, who is an absolute legend, always said there are seven types of teacher: I tried to aim for safe. I always want them to know where they stand and that standing still and passive learning is not an option. So it just leaves for me to give you, like good old Jerry Springer, the final thought for the day. Stay true to what your educational values are and make sure you befriend your fellow newly qualified teachers NQTs. The friendships you make there will see you through and I have no doubt last a lifetime. Have fun and always come back to this thought; that everything we do is about the kids. So good luck, have a great time and remember to enjoy yourself as you embark on the journey of a lifetime. Marie Hazel teaches science at the City Academy , Bristol and is also deputy head of humanities. This content is brought to you by Guardian Professional. Looking for your next role? ### 2: Planning for your first term: an essential guide for new teachers | Teacher Network | The Guardian

*If your state requires a specific number of school days that you need to complete in a year, you'll want to set specific start and end dates for your school year and terms. It's also a good idea to include a week or two of additional days just in case.*

February 17, 36 Comments Hi everyone! There are a couple schools of thought in this area. Changing just one thing is quite easily done. Some people prefer to schedule only a few weeks or months in advance since things might change. Homeschooling schedules can be very flexible based on your own needs, so again, do what works best for the needs of your family. This method also frees up your nights and weekends since all of the planning is already complete. All you have to do each Friday afternoon is make sure to have things ready for the upcoming week and then you have the rest of the weekend free to enjoy time with your family. Now comes the fun part! I know the thought of this can be overwhelming and frankly a daunting task. Taking the time to prepare ahead using the suggestions in this Chapter, will greatly increase the effectiveness of your planning time. I typically take a weekend to get all of my lesson planning done. The amount of time this step will take is going to depend on how old your students are and how many subjects you are planning for the year. This will save time when you start to enter your lessons into your planner. I also make a game plan of what I want to accomplish so I have a clue where to start. I like to start with one student, and plan one subject at a time. Then I move onto another, and finally another until I have gone through all of the subjects for that student. After that I will move onto the next student. For you it might make more sense to do one subject at a time for all of your students. Whatever makes the most sense to you, use that as your guide when planning. The first step in planning out your year is to decide what your year will look like. Taking into consideration your state requirements as well as any holidays, family vacations, etc. Determine a basic schedule. Core subjects such as Math, Reading, and English are typically done each day, but this can be modified based on the needs of your family. Other subjects such as science, history, art, and music can be alternated weekly to fit your schedule. Determine the number of lessons in the curriculum, then divide the total number of lessons by the number of weeks you will be in school. Once my main schedule is set up, I then take the time to put in any extracurricular activities that we have agreed to do for the year. If you know that you will be doing something that takes place during the day, make sure to include that in your weekly schedule overview so you know not to schedule any subjects during that time. Add the lessons into a planner. The next step in the planning process is to transfer all of your activities and lessons into a planning software, spreadsheet, or day planner. All of these items are acceptable means of planning, and really the format comes down to personal preference.

### 3: [www.enganchecubano.com](http://www.enganchecubano.com) - Online Lesson Planner

*How to Plan Your Homeschool Year is a post from Jen from Forever, For Always, No Matter What: Picking curriculum is the fun part of getting ready for a new homeschool year. The planning part can be a little bit more overwhelming. The value of the upfront time and energy spent, is that your school.*

Please see our advertising disclosure at the foot of this page for more information. This new series, Homeschool Scheduling, is designed to help you get your scheduling done quickly and efficiently- so you can step away from the stack of books and get on with summer fun! This month, I am going to work with you step by step to organize and plan out your curriculum, your time, and your home, so your school year can run a little more smoothly. Along with tips on scheduling, I am going to share with you some of my favorite time-saving products which help me run my home and keep my sanity during the school year. The other forms are used in this planning series, and in the budgeting week of our Homeschool series. Some people school for a traditional school year, following a public school calendar. Some states have requirements that the school year consist of at least days of instruction. These are two of the most common set ups: In our family, we do all our seat work as a 4 day school week, but Fridays very much count as school days because we still do math and reading- the rest of the lesson is just hands on, outdoors and travel centered. This is important, because it will help you break down your curriculum to determine what kind of pace you need to follow to complete it in the school year. Our curriculum plan covers a 4 day a week schedule. Big Picture Brainstorming So- first things first- I want you to sit down, and look at a calendar and determine what you are doing, when. Do you have a yearly vacation? Do you like to have December off for crafts and baking? Does Little Jill have soccer season that takes a lot away from your energy level? Do you participate in co-ops? Do you have goals for the kids in mind? I use this form as a way to brainstorm what I want to be doing, and when. This is also the place where I can see what kinds of stumbling blocks I have in store for me this year. For instance, I always, always burn out in March when winter is lasting just a little too long. I put that burn out on the big picture plan, so when I get to the next step, I can remember I need to plan a little extra down time that month to account for me moping on the couch about the lack of sunshine. Now, once that is done, sit down with the year at a glance page, and map out an ideal school year. I cross out the weekends, I label holidays in red, and highlight dates I know we will be out of town. If the week of November is week 7 of school, and I want to study about Native Americans that week, I can easily plug that study into Week 7 on the next form. X off time you want to take completely off from school, and start counting school days. Refer to your big picture calendar for holidays, days your spouse has off from work, and other local events and family plans you want to avoid over scheduling in your ideal school year. Open up to the table of contents and read in your teachers manual to see what the recommended pacing is. I move the sticky note as we go along, and am done with planning that book. We are secular homeschoolers, so for us, we skip the story of the exodus in Story of the World 1 and a few other small things. I then break the rest of it up into smaller bite sized chunks. For a more involved program like SOTW I also read ahead in the teachers manual and pick out what activities I want to do and when, so I have an easy to use spreadsheet of activities for planning purposes. You can download my 36 week secular plan for Story of the World 1 here. Write the pacing for each of the programs you are using on a yearlong spreadsheet, which will serve as your master pacing guide for the year. And refer back to it often! I would probably in this case, just plan on doing the first two chapters the first week, and make it a little easier on myself. If I was using Explode the Code, and wanted to complete books during the school year, I would count the pages in the 3 books, and then, assuming we were going to do ETC daily, divide by to see how many pages would need to be completed each day. This works even if you are a unit study homeschooler. For example, I would look at my list of things I want to study, and any materials I gathered like an electricity unit from Moving Beyond the Page, and a unit on Life in a Castle, and a unit on Community Helpers and start to schedule them in around the year. Unit studies just require a bit of on-going planning, instead of a one-time break down as outlined above. Keep your list of your programs that you paced

for the year, and be ready for next week! If you have any questions please feel free to ask in the comments! Everyone does things a little differently, and I would love to hear your ideas. Read the Whole Series on Scheduling:

### 4: How to Plan a year of Physical Education in 15 Minutes

*Confirm that your methods meet your goals. I don't like to put myself in a box and often picking a method feels that way. But a method isn't the law, it's more of a backbone, a support system of things that you enjoy doing in your homeschool.*

How do you plan for next year? It can take hours a week to plan well-crafted lessons that engage students and move them forward to the next level in their learning. Getting organized by creating a curriculum map for your year, topic planning for a few weeks and then diving into the daily plans will make a smooth process. Plan for Next Year: I love planning and making sure that each piece of the puzzle fits well with the other pieces. I am one of those teachers who is motivated to plan because I know that my lessons and time with students will go much smoother for me with a little work on the back end. You might not be a planner. Even without the detail, there should be three components to your planning: Yearlong planning enables you to see the big picture. It helps you align your standards, your assessments, your holidays and themes, as well as your larger units. Yearlong planning is best done with a team of people, although you can do it by yourself. Our grade level sat down together and mapped out the math, social studies, science, language, and writing standards for the year. We use Common Core, so I simply copied and pasted the standards into our year long plan for most of the areas. Not nearly done, but a good start! I revisit the map as I plan throughout the year and make adjustments as the year progresses. The beauty of it is that I can use it year after year, refining it as I go. Each year is a little bit easier to plan because of the map. Would you like an editable copy of the Curriculum Map? This is a blank template where you can fill in your own standards and topics for your classroom to help you plan for next year. It also includes resources that I use in my classroom to teach each standard during that unit. This template came from Teaching Maddeness. I downloaded it last year and adjusted it to fit my needs. It has really helped me see the flow of everything. I obviously have a lot of holes to fill in! I purposely left a few blank spaces and some wiggle room. This planner just has topics for each day, not lesson plans. Another option for this format is to keep track of and plan small group instruction. Here is another variation that I used another year to monitor my small group lessons. To find out how I organize my reading small groups, you can read about it in this Literacy Block Organization post. I have a pretty convoluted schedule to ensure that I am meeting with as many students as possible. But, it works and students make progress. It does take some planning, though! Daily Lesson Plans My daily lesson plans are the backbone of my teaching, especially at the beginning of the year. I told you I get detailed in my plans and I had so many details that I realized that I was giving away the information in the book! The beauty of Plan book is that my content will stay within the same boxes, even if I change the time or bump it to another day, or rearrange the schedule. My content is there. At this point in my life, I can type faster than I can write. I can also share the plans with my team mates with a click of a button or two. One warning about Planbook, that I found out the hard way: It totally messed things up. The content was there, just moved around. So, how do you plan for next year? Do you have a year-long curriculum map? This is a blank template where you can fill in your own standards and topics for your classroom.

### 5: Homeschooling Creating Lesson Plans - Confessions of a Homeschooler

*The key to success, I think, is in the book's subtitle: How to Plan a Year of Home Education that Fits the Reality of Your Life. So often, we leave out the "reality of life" part when planning - even if we're only planning for the upcoming week!*

Planning ahead will help you stay organized for the rest of the school year and will help ensure you are meeting the educational standards and common core curriculum initiatives. When kept in your lesson plan book, it can help you to stay on track each month in meeting the curriculum goals that you have set for the year. Start by creating a blank table for your template in a word processing document. List the months, September through June in the first column. In the rows at the top of the table, list all of your content areas from your curriculum guide for example, health, phonics, word work, spelling, social studies, science, and math. See the download below. Yearly plan templates can also be store-bought, but when the form is self-created, it is more likely to be easier to work with and utilized. Now it is time to start planning. Information can be typed in on the form; however, I still like to write in pencil so that I can modify my plans anywhere. Really it is a matter of personal preference. For example, a primary teacher may want to teach health themes in September. Look at the theme you would like to teach and where in the curriculum it can be covered. For example, in a Kindergarten classroom you have to teach about hand washing, rest and exercise and safety, it makes sense to teach in September, so add it to the September box. Do this for every subject for each month of the school year. Once the whole curriculum has been broken down into months in this way, it will be easier to make sure that everything is covered. Check the yearly plans frequently to see if it is being followed as planned. If not, modify the plan so that it is recorded for the next school year. The next step is to take the yearly plan and break it down by subject into months. For example, for the month of September, I will teach about weather, trees, seasons, and recycling in science. An example of a monthly plan for science is included below. Now you want to list the skills the students will be expected to learn, how it will be taught and how it will be assessed. Making a place for assessment is crucial, because instructional practices can be improved each year with the use of assessments. Continue to make a form for each subject area, listing the content, skills, objectives and assessments as shown below. This may seem like a tedious process, but now it will be easier to create weekly or bi-weekly plans. Also it will be easier to plan for "extras," such as projects and field trips when you can see where it fits into the curriculum. Fun projects can be justified when they meet and are an extension of the curriculum standards. Of course the style used for monthly and yearly planning is based upon personal preference. Some teachers prefer to write it out, others prefer to use computer software programs to plan , and still others prefer to create documents in Word or Excel. Ultimately, you will be happiest when you do what works best for you. Remember the saying, "make more and work less. Download the templates shown below here:

### 6: Plan for Next Year: Organize the Year, Topics & Daily Lessons

*Use these last days of summer to gain clarity on your intentions for the school year and create a game plan that every member of the family understands. calendar for the entire year with your.*

After school programs Communication with parents Having actual quantifiable goals for the different parts of your school marketing plan will be helpful in determining whether or not your initiatives are successful. Increase enrollment by 5 percent Increase donor gifts by 5 percent; increase donor participation by 10 percent Improve holiday program attendance by 20 percent Introduce a new after school program: Make a table to outline and organize your goals. As you begin to make a list of goals, it often can become excessive or overwhelming, especially for multi-level schools, schools with multiple campuses and school districts, which may have significantly different goals throughout the community. This is where it becomes crucial to prioritize goals and be realistic about what you can accomplish in one year versus three or five years. Some initiatives can easily be accomplished in one year, others may take two or three years. The viability of accomplishing each goal will depend on your school community and the resources available to you, and many overarching goals will have sub-sets of goals that work towards accomplishing the larger goal. Instead, find a smaller goal that will help you reach that larger objective, like increase inquiries by 10 percent. Pick the top three or four things that either need the most urgent attention or will have the greatest impact on your community in one year, and be realistic about your expectations. Some schools go so far as to have signed contracts with key stakeholders to guarantee adherence to the priorities and directions. Other resources you might need include social media, email marketing, print marketing and website improvements. These tools also require design and strong messaging. You may need to consider purchasing new products or outsourcing work to a professional. Tools are an investment and the right tools will make your efforts more efficient and effective. Figure out what you can use for resources this year, and work with your business office to find additional funds in the next year to accomplish the larger goals of your school marketing plan. Refining ideas means carefully choosing a strategy that will work for your school. It talks about how a failed marketing attempt led to a successful initiative and what went into building it. Making these plans is also helpful when you get those requests for small projects from departments other than your top clients. For example, if in part of your plan you decide that you can reasonably create three print publications and send five targeted emails to constituents on a set schedule with set concepts for each, it will give you the authority to nix alternate ideas that pop up during the year. You also need to measure results. This is where those quantitative goals come in handy. The images below is an example of how Cheshire Academy assessed the success of its annual fund marketing program. You can continue the successful components of your school marketing plan and delve into those unsuccessful initiatives to learn how to improve efforts next year.
