

## 1: Illinois Energy - Home

*In response to Energy Policy and this Conservation Act (PL ) and Energy Conservation and Production Act (PL ), this paper describes the activities to be undertaken by Illinois to meet the mandatory requirements of the Acts and to carry out other activities to encourage energy.*

Code enforcement is the duty of the local jurisdiction, which must meet minimum compliance documentation requirements. The code will then become effective within six months following its adoption by the CDB. Next Code Update The next code update for Illinois depends on the publication date of the IECC, which is still in preliminary code development stages. January 11, The Illinois Energy Conservation Code for residential buildings is implemented. A new energy code for privately funded commercial facilities is also implemented. Amendments to the residential provisions of the IECC include: The new code shall apply to any new building or structure in Illinois for which a building permit application is received by a municipality or county. The update proposal amendment includes: Instead, builders are required to follow the air infiltration checklist only; Section M February 15, A bill HB is introduced in the Illinois General Assembly that would exempt residential alterations, renovations, and additions from needing to comply with the Illinois Energy Conservation Code based on the IECC , significantly reducing the energy savings potential of the code. This bill eventually dies in the House. January 29, New requirements for residential buildings as stipulated by amendments to the Energy Efficient Building Act go into effect. The work to be carried out in the RFP is funded as part of the recent U. Department of Energy solicitation. August 28, Gov. This legislation preempts local jurisdiction home rule power over energy codes. The requirements of the new energy code will apply to all new residential and commercial buildings including alterations, additions, renovations, and repairs. Local jurisdictions will be prohibited from adopting energy codes more or less stringent for residential buildings although exemptions are provided for municipalities that have already adopted a code equivalent to or more stringent than the IECC [before May 15, ] or those that have a population of more than 1 million and from adopting energy codes less stringent for commercial buildings. Local jurisdictions that do not currently administer building energy standards will not be required to adopt or enforce the new state code, but the state government will implement and enforce the new state code on their behalf.
