To guide us through a few key points when buying a used R, we talk to Scott Barclay of Sharmans Agri. Those coming from s felt the newcomer was no match for the out-going model and it seemed the new electronic engine management had delivered different power and torque characteristics than what was expected. Deere says its issues with EGR valve and head gasket have been ironed out with the R. Deere soon stepped up and those early models were given a software update, equivalent to a remap, to shift grunt and give the tractor the performance it should have had at launch. VGTs were known to cause a few issues initially, but these should have been fixed under warranty. If the tractor has been dealer maintained, there will be a record of its history too. Transmission The R was available with a wide variety of transmission options, including a speed DirectDrive powershift transmission. Other gearbox options included AutoQuad Plus and PowerQuad Plus five-range transmissions with soft-shift capability for its four powershifts. Road speeds included 40kph and 50kph options depending on specification and Mr Barclay says revised shielding in the transmissions helped reduce parasitic losses caused by oil splashing. While some users have reported clunkiness on auto four-wheel drive engagement when braking, a simple road test should be able to determine if further investigation is needed. Brakes should also feel strong from a light pedal action. Cab Larger cab provides better views, however large panoramic doors can prove a pain to shut. It features a seven-inch full-colour GreenStar 3 CommandCenter display with optional touch-screen and video capability, integrated climate and radio controls, Bluetooth connectivity with SIM card access and an optional panorama roof. The terminal also provides service reminders and records the number of hours when a service is exceeded. You will find a folding passenger seat, left-hand storage compartment, tilt and telescopic steering column and a variety of power outlets and sockets in the cab. Electric, telescopic adjustable and heated mirrors were also on the options list. Rear end Rear end featured slight revisions, with longer arms for type 48 tyres and optional hydraulic stabilisers. The R came with a closed-centre, pressure and flow compensating hydraulic system. Find one with electronic SCVs and you can fettle the flow rates and times through the GreenStar 3 in-cab terminal. Lift capacity of the category three rear linkage is 8. Rear pto speeds include , E and rpm. Available as a factory-fitted option, the R could be equipped with an integrated front linkage with a lift capacity of 4,kg and a front pto. It also affords two front SCV couplers. This was said to compensate for power hop under heavy draft conditions. You can search hundreds of tractors, trailers, sprayers, balers, combines and many other types of machinery from independent dealers and private sellers. Find new and used farm machinery for sale.
