3: Outside In (Insider, #2) by Maria V. Snyder

Over the past decade, Inside Out and Outside In has become a very important book among mental health practitioners in a variety of disciplines that deal with individuals in their complex social environments.

Marketing Content Toyota and Dell both did it for a while but then stopped. Profiting from Customer Value. An edited transcript of the conversation follows. Think of customer value as the lens on the strategy. What are our capabilities and products? How can we use our resources more efficiently? Strategies are especially stressed during a recession, when companies must align their cost base with rapidly shrinking revenues in order to protect earnings. The management team focuses almost entirely on internal processes – improving productivity, downsizing and so forth. This response is appropriate when your goal is to drive short-run earnings. So we will continuously invest in learning about our customer and use this as an opportunity to gain an advantage by improving our value proposition. Can you give us more detail about Tesco? Tesco started moving to this strategy in when it began to look at everything it did from the perspective of customers. The company also focused on making the customer an asset by doing things like stocking its stores with products that reflected the tastes of shoppers in a particular area. In one case, shoppers who bought diapers at a Tesco store received coupons by mail not only for baby wipes and toys, but also for beer. When the company entered the U. They discovered, for example, that Americans like to buy prepared meals at a grocery store more often than Europeans. Finally, Tesco was quick to recognize an opportunity in the market for retail financial services in the UK, especially after customers became increasingly distrustful of big banks that accepted bailouts during the recent financial crisis. Taking advantage of its huge transactional database, Tesco started offering credit cards and then moved up to bank accounts and mortgages. They have now become a significant player in financial products – all because they know much more about their customers than the banks do. Tesco does that really well with its 14 million customers. I always thought the purpose of a company was to create shareholder value. Now you are saying it is to create and keep customers. I know that if done well, this obviously helps to increase profits, which then increases shareholder value. But it does suggest a slightly different emphasis. Do you expect any pushback on this? We are, in fact, suggesting a dramatically different emphasis, but we are suggesting it as more of a rebalancing. If you focus totally on shareholder value, that leads you to a short-term perspective. We would like to go the route of saying that the customer is the source of the value, and then deliver a better value proposition. The market will reward that. So we see shareholder value as an outcome rather than the primary focus. A lot of companies say they focus on customers and drive strategy from the perspective of the market – i. Knowledge Wharton High School Day: Why do companies become inward looking? If you focus on improving efficiency, you get results – for a while. Strategy theorists argue that resources exist to be used and the task of managers is to improve and fully exploit them. This is certainly a worthwhile aim but, on its own, it is an inherently limiting and unbalanced approach. We will figure out how to give it to them. Toyota is an example of a company that began to focus on the wrong metrics. It became obsessed, not with what the customer needed, but with beating General Motors and becoming big. The company became too internally focused, tried to grow way too fast and lost sight of quality. As we know, they ran into quality problems. Without strong leadership, internal concerns are likely to take precedence. These issues are crucial and must be dealt with, but if they take precedence, you lose perspective. Such attitudes have been especially manifest in the last two years. A lot of companies were worrying about survival. Markets these days are so volatile that you must keep experimenting. Downsizing adds to the defensive mentality. If everyone in your industry is acting the same way, then you will be okay; if everyone is defensive and is cutting back, you will be protected. We talk about market insights – understanding the changing needs of customers and drawing out actionable ideas. You have to be out there living with them. An effective CMO [chief marketing officer] and CEO will make sure the whole management team is immersed in the market as opposed to talking to each other in the C-suite. They will be gathering deep insights into competitors. Yes, companies are still swamped in a data tsunami. But they are much more adaptive. They are doing more experimentation and finding out what works. Can you give us some examples

of successful approaches? Another company is India-based Godrej – a conglomerate that is involved in industries ranging from appliances and consumer goods to health care and security. India has 26 states representing 26 different markets. This means that every state, in effect, has its own advocate. How does one prove that it is working? Your channels may be your best litmus test. It really understood its corporate market. Going way back to the early days of Dell in the s, Michael Dell had a visceral connection with his market. They understood that what their big corporate customers wanted was individually configured computers that could be delivered to dozens, if not hundreds, of sites. The second litmus test is, do you know who your customers are and what value you are delivering to them? The company had to continue to go down the price curve but it no longer had much of a cost advantage. So Dell did two things. First, it cut back on customer support and service, which meant their customer satisfaction ratings at one point plummeted. Second, they were so focused on streamlining the supply chain – investing in [quality control program] Six Sigma, supply chain coordination efficiencies, etc. Then, three to four years ago, a big shift occurred with the flattening out of the corporate PC market and the arrival of PCs and laptops being purchased from Apple stores, Best Buy and other retail outlets – all places that offer companies a closer connection to their customer. Dell had made a conscious decision not to have a retail presence. The third litmus test is, what is the role of marketing in this organization? Is the marketing function viewed as credible? Are market insights and foresight driving the results of the organization? But Chambers realized he had to meet the needs of his customers, so in , Cisco purchased a VoIP business in what has turned out to be an extremely profitable acquisition. In the last decade, we have seen a tremendous proliferation in the number of channels: Markets are splintering and companies can reach finer and finer segments with tailored offerings. They have much more pricing flexibility. Every cell phone has thousands of different pricing plans. You layer social media and social networking on top of that, and you can then enter into an increasingly direct dialogue with your customers. So many more media are available as ways to reach customers. The net effect is that it is much more difficult to navigate through this complex market environment. This is not about prediction. Prediction says we will forecast in advance where things will go. What is the role of the CMO in all of this? The CEO is first among equals. But if you have everyone accountable, who has direct day-to-day responsibility? In an increasing number of organizations, but not a majority, that job belongs to the CMO. We talk about the CMO as someone who has earned that responsibility. An increasing number of CMOS are top line leaders. They own the value proposition and they position the business for the future. In many medium-sized organizations, the CMO tends to be in a sales support function rather than assuming responsibility for the brand, for finding organic growth opportunities. The people we have seen who have been successful in the CMO role are those who build up credibility with the CEO and the rest of the C-suite by really knowing the job and being a passionate advocate for customer value. The subtitle of your book is Profiting from Customer Value. Can you talk a little more about who this customer is? In many markets, the distinction is made between consumers – you and me, the final buyer – and customers, which would be channels and channel intermediaries. It can refer to anyone who is making a choice based upon comparative value propositions. The customer buys the expectation of benefits. They are going to patronize the company that delivers the best package of benefits at the most reasonable total cost.
