Journal of Financial Econometrics, 3 3. Journal of Business, 78 5. Land Economics, 91 3. Urban Studies, 50 Journal of Real Estate Research, 35 2.

2: Introductory econometrics for finance. 3rd edition - CentAUR

Introductory Econometrics for Finance SECOND EDITION This best-selling textbook addresses the need for an introduction to econometrics specifically written for finance students.

Sign up Log in Introductory Econometrics for Finance This bestselling and thoroughly classroom-tested textbook is a complete resource for finance students. A comprehensive and illustrated discussion of the most common empirical approaches in finance prepares students for using econometrics in practice, while detailed case studies help them understand how the techniques are used in relevant financial contexts. Worked examples from the latest version of the popular statistical software EViews guide students to implement their own models and interpret results. Learning outcomes, key concepts and end-of-chapter review questions with full solutions online highlight the main chapter takeaways and allow students to self-assess their understanding. Building on the successful data- and problem-driven approach of previous editions, this third edition has been updated with new data, extensive examples and additional introductory material on mathematics, making the book more accessible to students encountering econometrics for the first time. A companion website, with numerous student and instructor resources, completes the learning package. He has diverse research interests and has published over a hundred articles in leading academic and practitioner journals, and six books. He acts as consultant and advisor for various banks, corporations and professional bodies in the fields of finance, real estate, and econometrics. Subject to statutory exception and to the provisions of relevant collective licensing agreements, no reproduction of any part may take place without the written permission of Cambridge University Press. Finance " Econometric models. Contents List of figures List of tables List of boxes List of screenshots Preface to the third edition Acknowledgements 1 Introduction 1. Regression versus correlation Simple regression Some further terminology Simple linear regression in EViews " estimation of an optimal hedge ratio page xii xv xvii xix xxi xxv 1 2 2 4 7 11 12 13 14 24 24 28 28 37 41 56 61 75 75 76 76 84 86 vi Contents 3. Can UK unit trust managers beat the market? The overreaction hypothesis and the UK stock market The exact significance level Hypothesis testing in EViews " example 1: Mathematical derivations of CLRM results Further development and analysis of the classical linear regression model 4. A brief introduction to factor models and principal components analysis 5 Classical linear regression model assumptions and diagnostic tests 5. Simultaneous equations in finance A definition of exogeneity Triangular systems Estimation procedures for simultaneous equations systems An application of a simultaneous equations approach to modelling bid-ask spreads and trading activity Simultaneous equations modelling using EViews Vector autoregressive models Does the VAR include contemporaneous terms? Parameter estimation using maximum likelihood 10 Switching models What panel techniques are available? The fixed effects model Time-fixed effects models Investigating banking competition using a fixed effects model The random effects model Panel data application to credit stability of banks in Central and Eastern Europe An ordered probit analysis Censored and truncated dependent variables Limited dependent variable models in EViews Appendix: The maximum likelihood estimator for logit and probit models 13 Simulation methods Selecting the topic Sponsored or independent research? The research proposal Working papers and literature on the internet Getting the data Choice of computer software Methodology Event studies Tests of the CAPM and the Fama-French Methodology Contents.
