

1: Why An Alkaline Approach Can Successfully Treat Cancer | GreenMedInfo

Time Traveler for bred-in-the-bone. The first known use of bred-in-the-bone was in the 15th century. See more words from the same century.

In the close of the foregoing chapter we left the world in ruins and the church in straits; but in this chapter we have the repair of the one and the enlargement of the other. Now the scene alters, and another face of things begins to be presented to us, and the brighter side of that cloud which there appeared so black and dark; for, though God contend long, he will not contend for ever, nor be always wrath. We have here, I. The earth made anew, by the recess of the waters, and the appearing of the dry land, now a second time, and both gradual. The increase of the waters is stayed, ver. They begin sensibly to abate, ver. Two months after the appearing of the tops of the mountains, the waters had gone, and the face of the earth was dry ver. Man placed anew upon the earth, in which, 1. His sacrifice of praise, which he offered to God upon his enlargement, ver. And thus, at length, mercy rejoices against judgment. The Earth Becomes Dry. God remembered Noah and every living thing. This is an expression after the manner of men; for not any of his creatures Luke xii. It is a strange expression, Ezek. The demands of divine justice had been answered by the ruin of those sinners; he had eased him of his adversaries Isa. He remembered mercy in wrath Hab. Noah himself, though one that had found grace in the eyes of the Lord, yet seemed to be forgotten in the ark, and perhaps began to think himself so; for we do not find that God had told him how long he should be confined and when he should be released. Very good men have sometimes been ready to conclude themselves forgotten of God, especially when their afflictions have been unusually grievous and long. Perhaps Noah, though a great believer, yet when he found the flood continuing so long after it might reasonably be presumed to have done its work, was tempted to fear lest he that shut him in would keep him in, and began to expostulate. How long wilt thou forget me? But at length God returned in mercy to him, and this is expressed by remembering him. Note, Those that remember God shall certainly be remembered by him, how desolate and disconsolate soever their condition may be. He will appoint them a set time and remember them, Job xiv. With Noah, God remembered every living thing; for, though his delight is especially in the sons of men, yet he rejoices in all his works, and hates nothing that he has made. He considered the cattle of Nineveh, Jon. He commanded the wind, and said to that, Go, and it went, in order to the carrying off of the flood: God made a wind to pass over the earth. Note, Those whom God remembers he remembers effectually, for good; he remembers us to save us, that we may remember him to serve him. What a sovereign dominion God has over the winds. He has them in his fist Prov. He sends them when, and whither, and for what purposes, he pleases. Even stormy winds fulfil his word, Ps. It should seem, while the waters increased, there was no wind; for that would have added to the toss of the ark; but now God sent a wind, when it would not be so troublesome. Probably, it was a north wind, for that drives away rain. He remanded the waters, and said to them, Come, and they came. He took away the cause. He sealed up the springs of those waters, the fountains of the great deep, and the windows of heaven. He that wounds is alone able to heal. Then the effect ceased; not all at once, but by degrees: The waters abated v. Note, As the earth was not drowned in a day, so it was not dried in a day. But, the work of creation being finished, this work of providence was effected by the concurring influence of second causes, yet thus enforced by the almighty power of God. God usually works deliverance for his people gradually, that the day of small things may not be despised, nor the day of great things despaired of, Zech. Here we have the effects and evidences of the ebbing of the waters. This was some satisfaction to Noah, to feel the house he was in upon firm ground, and no longer movable. Note, God has times and places of rest for his people after their tossings; and many a time he provides for their seasonable and comfortable settlement without their own contrivance and quite beyond their own foresight. The ark of the church, though sometimes tossed with tempests, and not comforted Isa. The tops of the mountains were seen, like little islands, appearing above the water. We must suppose that they were seen by Noah and his sons; for there were none besides to see them. They felt ground above forty days before they saw it, according to Dr. We have here an account of the spies which Noah sent forth to bring him intelligence from abroad, a raven and a dove. That though God had told Noah particularly when the flood

would come, even to a day ch. Because the knowledge of the former was necessary to his preparing the ark, and settling himself in it; but the knowledge of the latter would serve only to gratify his curiosity, and the concealing of it from him would be the needful exercise of his faith and patience. He could not foresee the flood, but by revelation; but he might, by ordinary means, discover the decrease of it, and therefore God was pleased to leave him to the use of them. That though Noah by faith expected his enlargement, and by patience waited for it, yet he was inquisitive concerning it, as one that thought it long to be thus confined. Note, Desires of release out of trouble, earnest expectations of it, and enquiries concerning its advances towards us, will very well consist with the sincerity of faith and patience. He that believes does not make haste to run before God, but he does make haste to go forth to meet him, Isa. Noah sent forth a raven through the window of the ark, which went forth, as the Hebrew phrase is, going forth and returning, that is, flying about, and feeding on the carcasses that floated, but returning to the ark for rest; probably not in it, but upon it. This gave Noah little satisfaction; therefore, 2. He sent forth a dove, which returned the first time with no good news, but probably wet and dirty; but, the second time, she brought an olive-leaf in her bill, which appeared to be first plucked off, a plain indication that now the trees, the fruit-trees, began to appear above water. That Noah sent forth the dove the second time seven days after the first time, and the third time was after seven days too; and probably the first sending of her out was seven days after the sending forth of the raven. This intimates that it was done on the sabbath day, which, it should seem, Noah religiously observed in the ark. Having kept the sabbath in a solemn assembly of his little church, he then expected special blessings from heaven, and enquired concerning them. Having directed his prayer, he looked up, Ps. The dove is an emblem of a gracious soul, which finding no rest for its foot, no solid peace or satisfaction in this world, this deluged defiling world, returns to Christ as to its ark, as to its Noah. The carnal heart, like the raven, takes up with the world, and feeds on the carrions it finds there; but return thou to thy rest, O my soul, to thy Noah, so the word is, Ps. O that I had wings like a dove, to flee to him! And as Noah put forth his hand, and took the dove, and pulled her in to him, into the ark, so Christ will graciously preserve, and help, and welcome, those that fly to him for rest. The olive-branch, which was an emblem of peace, was brought, not by the raven, a bird of prey, nor by a gay and proud peacock, but by a mild, patient, humble dove. It is a dove-like disposition that brings into the soul earnestness of rest and joy. Some make these things an allegory. The ground dry v. He removed the covering of the ark, not the whole covering, but so much as would suffice to give him a prospect of the earth about it; and a most comfortable prospect he had. For behold, behold and wonder, the face of the ground was dry. It is a great mercy to see ground about us. Noah was more sensible of it than we are; for mercies restored are much more affecting than mercies continued. The divine power which now renewed the face of the earth can renew the face of an afflicted troubled soul and of a distressed persecuted church. He can make dry ground to appear even where it seemed to have been lost and forgotten, Ps. The ground dried v. Observe, Though Noah saw the ground dry the first day of the first month, yet God would not suffer him to go out of the ark till the twenty-seventh day of the second month. Perhaps Noah, being somewhat weary of his restraint, would have quitted the ark at first; but God, in kindness to him, ordered him to stay so much longer. Note, God consults our benefit rather than our desires; for he knows what is good for us better than we do for ourselves, and how long it is fit our restraints should continue and desired mercies should be delayed. We would go out of the ark before the ground is dried: Noah did not stir till God bade him. As he had a command to go into the ark ch. Note, We must in all our ways acknowledge God, and set him before us in all our removes. Though God detained him long, yet at last he gave him his discharge; for the vision is for an appointed time, and at the end it shall speak, it shall speak truth Hab. God had said, Come into the ark which he says, not, Come forth, but, Go forth, which intimates that God, who went in with him, staid with him all the while, till he sent him out safely; for he has said, I will not leave thee. Some observe that, when they were ordered into the ark, the men and the women were mentioned separately ch. But now God did as it were new-marry them, sending out Noah and his wife together, and his sons and their wives together, that they might be fruitful and multiply. Noah was ordered to bring the creatures out with him, that having taken the care of feeding them so long, and been at so much pains about them, he might have the honour of leading them forth by their armies, and receiving their homage. As he would not go out without leave, so he would not, out of fear or humour, stay in when he had leave, but was in

all points observant of the heavenly vision. Though he had been now a full year and ten days a prisoner in the ark, yet when he found himself preserved there, not only for a new life, but for a new world, he saw no reason to complain of his long confinement. But they are all alive. Noah brought out all the creatures that went in with him, except the raven and the dove, which, probably, were ready to meet their mates at their coming out. Noah was able to give a very good account of his charge; for of all that were given to him he had lost none, but was faithful to him that appointed him, *pro hac vice*—on this occasion, high steward of his household. He built an altar. Hitherto he had done nothing without particular instructions and commands from God. He had a particular call into the ark, and another out of it; but, altars and sacrifices being already of divine institution for religious worship, he did not stay for a particular command thus to express his thankfulness.

2: What's Bred in the Bone - Wikipedia

Can the strength of your bones provide a key to your risk of developing Alzheimer's disease? NEOMED's Christine Dengler-Crish, Ph.D., an assistant professor of pharmaceutical sciences, anatomy and neurobiology, has intriguing findings.

This treatment approach is not well known because it is considered alternative or experimental - or even dangerous [i] - by the medical and scientific community and hence has been referenced primarily in obscure publications outside the mainstream press. This treatment approach is called alkaline therapy or pH therapy, and is based in part on observations of cultures without significant incidence of cancer [ii] and in part on scientific observations of and experimentation with cellular metabolism. The metabolism of cancer cells has a very narrow pH tolerance for cellular proliferation mitosis, which is between 6. As such, if you can interfere with cancer cell metabolism by either lowering or raising the internal cancer cell pH, you can theoretically stop cancer progression. According to published research, it is at that pH they revert to a normal cellular apoptosis cycle programmed cell death. In a previous article, I outlined the six steps that every cancer patient should take to provide the best chance to heal from and prevent future recurrences of cancer using alkaline diet principles. An alkaline diet based on vegetables and fruits creates a less-than-optimal environment for cancer proliferation, while at the same time strengthens the immune function and supports healthy cells in the body through improved nutrition. The second step is to use some nutritional mechanism to move the internal cancer cell pH from the optimal mitosis range of pH 6. As described by its proponents, alkaline therapy neutralizes the acid waste of the cancer which causes so much pain, interferes with the anaerobic fermentation of glucose that starts the self-feeding acidic cancer wasting cycle called cachexia and in time, can induce remission. If this theory of alkaline therapy holds true, it should be possible to address cancer without chemotherapy, radiation or surgery and use alkaline therapy as a primary cancer treatment. This bold statement comes from a somewhat abstruse body of research. In , Otto Warburg won the Nobel Prize for his work on the metabolism of tumors and the respiration of cells, which was later summarized in his paper, On the Origin of Cancer Cells. Keith Brewer, PhD physicist performed experiments on the relationship between energized, oxygenated cell membrane and elemental uptake, vs. He wrote a number of papers discussing the cellular mechanisms of cancer cells and the changes in metabolism induced or indicated by the lack of or presence of oxygen in combination with other elements, particularly potassium and calcium. He noted that cancer cells share one characteristic no matter what type of cancer: In other words, he proposed that cancer cells will die if they can be pushed into an alkaline, oxygenated state. These areas contain concentrations of alkalizing minerals in the soil and water, which are greater than in other parts of the world. For example, the Hunza of northern Pakistan and the Hopi Indians of the American West share both similar soil and water conditions and diet. The alkaline elemental minerals of cesium chloride, germanium and rubidium are heavily present in the soil and water. Ingestion of these elements is correspondingly high. These peoples also live in similar high, dry climates and grow apricot orchards, traditionally eating the fresh or dried fruit and the seeds each day. This is all very interesting, but what does it really mean for cancer patients who wish to avoid the pain of cancer and the typical course of treatment using surgery, chemotherapy and radiation? What are the conditions that will force cancer cells to change their pH? Conventional chemotherapeutic agents such as Cytosan usually cause more damage to normal cells than to cancer cells, because cancer cells have a very thick, unenergized cellular membrane that essentially protects them from absorbing many drugs. Normal cells have no such protection. Conversely, cancer cells have no way to normalize their internal pH, where normal cells are relatively unaffected by high concentrations of alkalizing minerals. However cancer cells take up primarily two elements: In practical application, then, it is necessary to find a way to guide alkalizing elements - such as cesium, germanium or rubidium - into cancer cells, without impacting normal cells. Cancer cells appear to have preferential uptake of cesium chloride in particular, but also take up germanium, rubidium, selenium, etc. There is a compound that is frequently applied to the skin by arthritis sufferers for relief of inflammation, used in brain surgery to relieve intracranial pressure and topically used in sports medicine and veterinary medicine,

[xii] also for reducing inflammation. This compound is called DMSO and it is formed in the slurry created from soaking wood chips in water that is a bi-product of the paper making industry. Folklore has it that workers in the paper making industry were observed to have their hands in water continuously, but they never developed arthritis and had rapidly healing skin and strong nails. DMSO is medically approved in the United States only for the treatment of interstitial cystitis, a type of inflammation of the bladder. There is now some interest in the cancer industry in potentially using DMSO to carry chemotherapeutic agents into cancer cells and get beyond their protective membrane. However, for the purposes of changing the alkalinity of cancer cells using cesium chloride, germanium, rubidium and other alkalizing minerals, DMSO and its ingestible form, MSM, are an effective medium. Essentially these agents carry the minerals into all areas of the body including the brain, organs and bone marrow, where they can be used with other nutrients in ordinary cellular metabolism. Using topically applied and ingested alkaline minerals to change cancer cell pH is not a new idea. Controlled experiments and the personal use of this method have been ongoing since the mids. However, it is important to note that the only FDA approved clinical trial did not have outstanding results. Others had side effects ranging from leg cramps to heart arrhythmia. A careful read will lead you to believe that perhaps they were given too strong a dose in too short a period of time. All cells require potassium to function. The reason cancer cells take up these alkaline minerals is their resemblance to potassium. Functionally, however, these minerals cannot take the place of potassium in cellular metabolism. While substituting alkaline minerals for potassium creates exactly the desired result in cancer cells – increased alkalinity - when normal cells replace potassium with other minerals over the long term the consequences can be quite serious as it causes electrolyte imbalance, manifested as heart arrhythmia and leg cramps. Alkaline minerals are ingested or applied to the skin only during the day. Then before sleep, the user must take potassium chloride supplementation along with other electrolytes such as magnesium and calcium if needed. Monitoring of potassium blood levels every two weeks by a doctor is critical if a cancer patient decides to incorporate alkaline therapy into their cancer regime. When properly balanced, the side effects of using alkaline minerals are greatly if not completely remediated by electrolyte rebalancing. Despite the "fear, fire, foe" tone of Mssrs. Wiens et al in the article cited above [xvii] there is no risk of dying of a heart attack or leg cramp , unless the patient ignores the proper method using alkaline minerals and is not working in consultation with an experienced specialist. Electrolyte rebalancing must be carefully applied using specific doses of supplements, based on your personal blood composition, in consultation with a nutrition expert or endocrinologist. My personal experience with pH therapy has been nothing short of spectacular. I have seen stage four, terminal cancer patients recover using alkalizing minerals. There are patients who report untreatable cancers, such as nasal or fully metastasized breast cancers, which after a very persistent course of tiny doses over several years, eventually disappeared altogether. Patients who have never had chemotherapy or radiation often experience rapid remission after changing to an alkaline diet and incorporating the use of alkaline minerals into their regime. However pH therapy using alkaline minerals requires quite a bit of knowledge do your homework! Many mineral providers sell minerals, but do not have the ability to assist the users. Therefore, it is critical to seek a mineral provider who can provide references to extensive information and is available to help you work through the rough spots – and there will be some! It is my direct personal experience that cancer can be controlled using alkaline minerals. There are thousands of people who have had similar positive experiences. Does it work for everyone? Significant when compared to traditional therapies. This finding is why I started The Cancer Alternative Foundation - to help cancer patients feel comfortable using effective, natural therapies like pH therapy as part of their overall treatment strategy. The Foundation simply researches and vets the claims of various alternative offerings for cancer – and there are more than ! To date, we have concluded that high pH therapy is one of the most effective alternatives, particularly for later stage cancers. However alkaline therapy outcomes as well as those for other sound alternatives have yet to be documented in a systematic way, such that the medical community could reliably understand the positive impact that incorporating it into cancer treatment could make to hundreds of thousands of cancer sufferers. Collecting outcomes is a current project at The Cancer Alternative Foundation and should prove invaluable to cancer patients and their doctors and care givers alike. It is my hope that this promising and effective natural approach to cancer becomes more accepted

IX. BRED IN THE BONE. pdf

by mainstream cancer care providers - as well as those enlightened individuals seeking a natural alternative, who are willing to close their eyes and jump. An alkaline approach to cancer can only help them to enjoy their future "as in having one! Keith and Passwater, R. Physics of the Cell Membrane V. adjective. firmly instilled or established as if by heredity: the bred-in-the-bone integrity of the school's headmaster. deeply committed or resolved; unwavering: a bred-in-the-bone believer in civil rights.

In Silence and Tears. When he had time to think, Colonel Kelmscott determined in his own mind that he would still do his best to save Granville, whether Granville himself wished it or otherwise. So he proceeded to take all the necessary steps for breaking the entail and raising the money he needed for Guy and Cyril. In all this, Granville neither acquiesced nor dissented. He signed mechanically whatever documents his father presented to him, and he stood by his bargain with a certain sullen, undeviating, hard-featured loyalty; but he never forgot those few angry words in which his father had half let out his long-guarded life secret. Thinking the matter over continually with himself, however, he came in the end to the natural conclusion that one explanation alone would fit all the facts. Colonel Kelmscott must have been married to some one else before his marriage with Lady Emily. And it was to him that his father, in his passionate penitence, proposed, after many years, to do one-sided justice. Now Granville Kelmscott, though a haughty and somewhat head-strong fellow, after the fashion of his race, was a young man of principle and of honour. For here an awful dilemma blocked the way before him. If the Colonel had married before, and if by that former marriage he had a son or sons--how could Granville be sure the supposed first wife was dead before the second was married? And supposing, for a moment, she was not dead--supposing his father had been even more criminal and more unjust than he at first imagined--how could he take the initiative himself in showing that his own mother, Lady Emily Kelmscott, was no wife at all in the sight of the law? The bare possibility of such an issue was too horrible for any son on earth to face undismayed. So, tortured and distracted by his divided duty, Granville Kelmscott shrank alike from action or inaction. In the midst of such doubts and difficulties, however, one duty shone out clear as day before him. Till the mystery was cleared up, till the problem was solved, he must see no more of Gwendoline Gildersleeve. He had engaged himself to her as the heir of Tilgate. She had accepted him under that guise, and looked forward to an early and happy marriage. Now, all was changed. He was, or might be, a beggar and an outcast. The park and fallow deer had been a part of himself; without them, he felt he was hardly even a Kelmscott. He must throw himself upon her mercy, without cause assigned, and ask her for the time being to have faith in him and to believe him. So, a day or two after the interview with his father in the library, the self-disinherited heir of Tilgate took the path through the glade that led into the dell beyond the boundary fence--that dell which had once been accounted a component part of Tilgate Park, but which Gilbert Gildersleeve had proved, in his cold-blooded documentary legal way, to belong in reality to the grounds of Woodlands. It was in the dell that Granville sometimes ran up against Gwendoline. He sat down on the broken ledge of ironstone that overhung the little brook. Presently, a light footfall rang soft upon the path, and next moment a tall and beautiful girl, with a wealth of auburn hair, and a bright colour in her cheeks, tripped lightly down the slope, as if strolling through the wood in maiden meditation, fancy free, unexpecting any one. Gwendoline let her eyes fall modestly on the ground, as if some warmer greeting were more often bestowed between them. The young man blushed with a certain manly shame. I must throw myself upon your faith. I must just ask you to trust me. Kelmscott" at this sudden leap into the stern realities of life, "Why, Granville, what do you mean? You know I can trust you. You know, whatever it may be, I believe you implicitly. It was a terrible message to have to deliver. He bungled and blundered on, with many twists and turns, through some inarticulate attempt at an indefinite explanation. But something had happened to him within the last few days--something unspeakable, indefinite, uncertain, vague, yet very full of the most dreadful possibilities; something that might make him unable to support a wife; something that at least must delay or postpone for an unknown time the long-hoped-for prospect of his claiming her and marrying her. Some day, perhaps--he broke off suddenly, and looked with a wistful look into her deep grey eyes. His resolution failed him. The beautiful girl, turning towards him with a wild sob, fell, yielding herself on his breast, and cried hot tears of joy at that evident sign that, in spite of all he said, he still really loved her. They sat there long, hand in hand, and eye on eye, talking it all over, as lovers will, with infinite delays, yet getting no nearer towards a solution either way.

All she wanted was to love him and be near him. Let him marry her now, marry her to-day, and then go where he would in the world to seek his livelihood. At least, not as she took it. She must have faith in him and trust him. She must wait and see. In the end, he hoped, he would come back and marry her. And Gwendoline made answer, with many tears, that she knew it was so, and that she loved him and trusted him. So, after sitting there long, hand locked in hand, and heart intent on heart, the two young people rose at last to go, protesting and vowing their mutual love on either side, as happy and as miserable in their divided lives as two young people in all England that moment. After that, they kissed again, and declared once more they were broken-hearted, and could never leave one another. But still, Granville added, half aside, he must make up his mind not to see Gwendoline again--honour demanded that sacrifice--till he could come at last a rich man to claim her. Meanwhile, she was free; and he--he was ever hers, devotedly, whole-souledly. But they were no longer engaged. He was hers in heart only. Let her try to forget him. He could never forget her. And Gwendoline, sobbing and tearful, but believing him implicitly, retreated with slow steps, looking back at each turn of the zigzag path, and sending the ghosts of dead kisses from her finger-tips to greet him. Below in the dell Granville stood still, and watched her depart in breathless silence. Then, in an agony of despair, he flung himself down on the ground and burst into tears, and sobbed like a child over his broken daydream. Gwendoline, coming back to make sure, saw him lying and sobbing so; and, woman-like, felt compelled to step down just one minute to comfort him.

4: Frederick Buechner bibliography - Wikipedia

What's Bred in the Bone is the second novel in the Canadian writer Robertson Davies' Cornish Trilogy. It is the life story of Francis or Frank Cornish, whose death and will were the starting point for the first novel, *The Rebel Angels*.

It was late when Elma reached the station. Her pony had jibbed on the way downhill, and the train was just on the point of moving off as she hurried upon the platform. Old Matthews, the stout and chubby-cheeked station-master, seized her most unceremoniously by the left arm, and bundled her into a carriage. He had known her from a child, so he could venture upon such liberties. As for Elma, somewhat hot in the face with the wild rush for her ticket, and grasping her uncounted change, pence and all, in her little gloved hand, she found herself thrust, hap-hazard, at the very last moment, into the last compartment of the last carriage — alone — with an artist. The gross and clumsy male intellect, which works in accordance with the stupid laws of inductive logic, has a queer habit of requiring something or other, in the way of definite evidence, before it commits itself offhand to the distinct conclusion. But Elma Clifford was a woman; and therefore she knew a more excellent way. HER habit was, rather to look things once fairly and squarely in the face, and then, with the unerring intuition of her sex, to make up her mind about them firmly, at once and for ever. And yet our girls want to go to Girton, and train themselves up to be senior wranglers! Now, this was clever of her, even in a woman, for Cyril Waring, as he fondly imagined, was travelling that line that day disguised as a stock-broker. In other words, there was none of the brown velveteen affectation about his easy get-up. Instead of cutting his beard to a Vandyke point, or enduing his body in a Titianesque coat, or wearing on his head a slouched Rembrandt hat, stuck carelessly just a trifle on one side in artistic disorder, he was habited, for all the world like anybody else, in the grey tweed suit of the common British tourist, surmounted by the light felt hat or bowler, to match, of the modern English country gentleman. It showed him merely as a man of taste, with a decided eye for harmonies of colour. So when Elma pronounced her fellow-traveller immediately, in her own mind, a landscape artist, she was exercising the familiar feminine prerogative of jumping, as if by magic, to a correct conclusion. She looked down at the seat where the stranger pointed, and there, sure enough, coiled up in huge folds, with his glossy head in attitude to spring at her, a great banded snake lay alert and open-eyed. Eh, eh, my beauty? Only I thought I was alone, and nobody would come in; so I let him out for a bit of a run between the stations. His skin was like enamel; his banded scales shone bright and silvery. And yet, how exquisitely flexible and beautiful he is! I should be sorry to disturb him. He caught the creature in his hands as he spoke, and transferred it at once to a tin box, with a perforated lid, that lay beside him. The lights and shades on his back are so glancing and so wonderful! How on earth could you tell I was an artist even? Now she came to think of it, HOW did she know that handsome young man, with the charming features, and the expressive eyes, and the neatly-cut brown beard, and the attractive manner, was an artist at all, or anything like it? And how did she know the snake was his model?

Radiograph of a cannon bone from a horse with buck shins. Notice the increased thickness on front of the cannon. Thickening of the periosteum membrane covering the bone can be noted initially and fissure fracture or saucer fracture are potential later complications. Surgical intervention is recommended in cases that develop a stress or saucer fracture in order to speed the healing process. Stress fracture in the cannon bone of a race horse. Surgical repair of a stress fracture Petrisor Baia DVM Neely Heidorn PhD Introduction A common bone problem that occurs in young race horses during the first few months in training is dorsal metacarpal disease, commonly known as bucked shins. This is a performance-limiting condition that besides the economic factor predisposes these animals at increased risk of catastrophic injuries. Racehorse owners should understand and know how to prevent or treat bucked shins. Exercise is very healthy for humans and animals alike since the controlled stresses force our bodies to adapt and become stronger. Old bone is stripped away and replaced by new, stronger bone in areas that take the most stress, as in the cannon bone in horses. The body responds to hard training by thickening the front of the cannon bone. If training progresses too quickly and the body cannot keep up the stress on the bones with the bone remodeling process, then overexertion can lead to an inflammatory condition of the cannon bone known as bucked shins. It can affect one or both front cannon bones, and running a finger quickly over the affected area will cause an immediate reaction due to the painful nature of this condition. It is just far easier to overstress a young and developing horse than it is to overstress a fully mature and developed horse. Radiographs can determine the degree of damage and provide the necessary information to decide the best course of action. Systemic and topical anti-inflammatories are helpful for pain control and with the healing process. For years, the preferred treatment for bucked shins involved pin-firing of the affected area by applying a hot iron to the skin over the front of the cannon bones. The burning of tissue is supposed to strengthen the bone and decrease healing time by causing an acute inflammatory reaction. Although still used by some veterinarians, most vets feel firing is ineffective because the problem is in the bone, not the skin. The rest period associated with this type of treatment plays an important part. Complete stall rest is also not recommended because exercise is part of the healing process, and too much rest will allow the new bone growth to be reabsorbed, negating the positive effect of the stress. Prevention Laying a good foundation for the development of bone density through nutrition and proper stress on the bones should begin at birth. Once a horse reaches a higher level of performance training he should be moved up as slowly as possible using a program that includes an extended trot, gallops, and speed works. Studying this condition for more than 20 years, Dr. Nunamaker and his group at University of Pennsylvania have found that horses are not born with the right bone structure for racing; they must develop it. Different training is required for different activities. It has been found that high-speed exercise in small doses seems highly protective against bucked shins whereas long galloping exercise increases the risk of bucked shins. He recommends that young thoroughbreds be worked by increasing the number of short-distance breezes from once every 7 to 10 days to 3 times weekly. This technique produced large changes in remodeling and inertial property measurements of the cannon bone. Classical training produced little progressive change in the cannon bone, which was really not any better than no training at all. Bones with increased inertial property development have been shown to be less susceptible to bucked shins. A modified training program has been developed and is outlined below.

6: Bred in the Bone | NEOMED

Bred in the bone. A part of one's nature. "What's bred in the bone will come out in the flesh." A natural propensity cannot be repressed. Naturam furcã expellas, autem usque redibit. Bone in my Throat I have a bone in my throat. I cannot talk; I cannot answer your question. I have a bone in my.

The original Sanskrit text, now long lost, and which some scholars believe was composed in the 3rd century BCE, is attributed to Vishnu Sarma. Quotes[edit] We ought to do our neighbor all the good we can. If you do good, good will be done to you; but if you do evil, the same will be measured back to you again. Dabschelim and Pilpay, Chapter i. It has been the providence of Nature to give this creature [the cat] nine lives instead of one. The Greedy and Ambitious Cat, Fable iii. There is no gathering the rose without being pricked by the thorns. The Two Travellers, Chapter ii, Fable vi. Wise men say that there are three sorts of persons who are wholly deprived of judgment,â€”they who are ambitious of preferment in the courts of princes; they who make use of poison to show their skill in curing it; and they who entrust women with their secrets. Men are used as they use others. The King who became Just, Fable ix. What is bred in the bone will never come out of the flesh. The Two Fishermen, Fable xiv. Guilty consciences always make people cowards. The Prince and his Minister, Chapter iii, Fable iii. Whoever â€” prefers the service of princes before his duty to his Creator, will be sure, early or late, to repent in vain. There are some who bear a grudge even to those that do them good. A Religious Doctor, Fable vi. There was once, in a remote part of the East, a man who was altogether void of knowledge and experience, yet presumed to call himself a physician. The Ignorant Physician, Fable viii. He that plants thorns must never expect to gather roses. Honest men esteem and value nothing so much in this world as a real friend. Such a one is as it were another self, to whom we impart our most secret thoughts, who partakes of our joy, and comforts us in our affliction; add to this, that his company is an everlasting pleasure to us. Choice of Friends, Chapter iv. That possession was the strongest tenure of the law. The Cat and the two Birds, Chapter v, Fable iv.

7: The novels, stories, sketches and poems of Thomas Nelson Page. - CORE

Bred in the Bone is the stunning third novel in Brookmyre's series featuring private investigator Jasmine Sharp and Detective Superintendent Catherine McLeod. Set in the grisly underworld of Glasgowâ€”a place where countless old scores are always waiting to be settledâ€”Bred in the Bone is a masterful mystery novel that will appeal to.
