

1: Merge into JPG -- Online file merger

mFileBinder is an advanced file binder which binds multiple file of any type and merges into a single executable file. mFileBinder uses rijndael encryption algorithm to encrypt the file which can make Virus / Trojans Fully Undetectable.

Where you can use of this Bind file? Maybe with some cool animation. It is also way of hackers send you virus and. First I explain what is Binder? Binder is software used to bind or combine two or more files in one file under one name and extension. The files to be binded can have any extension or icon. The user has choice to select the name, icon and various attributes of binded file. If binded file contains an application in our case - RAT or keylogger , the application is also run when the actual binded file is run. There is much Binder software available on internet but here I explain some small binder software which is easy to use. You can fool the victim by sending him a song or picture and as soon as he opens the picture or song the Binder also gets open and starts working. After completion of process binded output file will save on your given output path. Using this software the binded file will always have. So it will be good in that case if you bind virus with an exe of software. It is same as executable file. So here it is fEvicol v1. If you dont mention any extension, by default it saves with. The icon of the binded executable file is configurable hope you can understand. With the help of this software you can easily lure windows user as displaying a known file extension is disabled. This material is only for educational purpose. If you Have any query please leave a comment in below box. Posted by Rachin Jain.
