2: Free Juniper JNCIA Training :: Junos Workbook

JNCIS exam but Juniper Networks cannot warrant that use of this publication will ensure passing the relevant exam. This book is dedicated to my wife, Christine, whose patience and love has allowed.

Referring to the exhibit, which two statements are true? The device will not have a Level 2 database. The device will not form adjacencies with devices in a different area. The IS-IS protocol is disabled on the device. The Level 2 database will be empty. B,D Click the Exhibit button. Referring to the exhibit, what is the problem? The LAG member interfaces are configured across different line cards. Aggregated interfaces must be defined under the chassis stanza. LAG requires more than two member links. B Explanation Use the link aggregation feature to aggregate one or more links to form a virtual link or link aggregation group LAG. In this scenario, which statement is correct? An error message is logged and the packet is forwarded. The packet is forwarded and no error message is logged. It allows you to apply independent CoS actions to data and voice packets. It allows trunk ports to accept tagged voice and untagged data packets. It allows the access port to accept tagged voice and untagged data packets. To assign differentiated priority to Voice traffic, it is recommended that class of service CoS is configured prior to enabling the voice VLAN feature. Typically, voice traffic is treated with a higher priority than common user traffic. Without differentiated treatment through CoS, all traffic, regardless of the type, is subject to the same delay during times of congestion. What are three extended BGP communities?

Which action must you perform on your OSPF router to solve this problem? Set the customer-facing interface to passive. Convert the area to a stub area. Change the OSPF external route preference. There is a mismatch in the hold timer parameter between routers R1 and R2. There is a mismatch in the dead interval parameter between routers R1 and R2. There is a mismatch in the hello interval parameter between routers R1 and R2. There is a mismatch in the poll interval parameter between routers R1 and R2. There is a Hello and Dead parameter mismatch. On R1 we see: In this scenario, which effect does this have on the IS-IS operations of the router? When the IS-IS protocol starts, the overload bit is set after the timer of seconds expires. After the first IS-IS adjacency forms, the overload bit is set for seconds. When the IS-IS protocol starts, the overload bit is set for seconds. After the first IS-IS adjacency forms, the overload bit is set after the timer of seconds expires. With a timeout, overload mode is set if the time elapsed since the IS-IS instance started is less than the specified timeout. To specify the number of seconds at which overload is reset, include the timeout option when specifying the overload statement: Which two statements are correct regarding this implementation? A,C Oracle 1Z - Good practice materials like our Service Provider Routing and Switching study question can educate exam candidates with the most knowledge.
