*This site has been made possible through a grant from the National Science Foundation.*

Wordle of Queensland Indigenous languages. The purpose of the workshop was to provide information to Indigenous language workers so that they could help preserve or re-establish the languages of their communities. Australia has an unenviable reputation in the loss of language – a recent ABC Radio interview highlighted this situation and the need for urgent action in language preservation; further details at ABC Linguicide Blog. There was a wealth of knowledge in the John Oxley Library Reading Room as individuals had great personal interest in languages and worked in schools, universities, museums, Indigenous Knowledge Centres and language centres. Several members of the group were language speakers and it was a wonderful experience to hear traditional languages spoken. In addition to language-specific items in the collection, participants also sought information pertaining to family and community histories, notably the Tindale Collection and Indigenous Photographic collections. The number of languages being researched at the workshop numbered over 50 – many of these no longer spoken on a daily basis. Meston Notebook - the daughters of Fernando Gonzales Researching languages Workshop participants researched some of the feature items from QM collections, including the following: Original Materials Archibald Meston Notebooks: OM – A collection of press cuttings, notes, correspondence relating mainly to Aborigines in Queensland, in particular, to language. OM – Manuscript contains information about the Aboriginal people of the Warrego and Maranoa regions. TR – material collected by Margaret Lawrie from relating to Torres Strait Islander languages, histories, genealogies, cultures, customs, art, etc. Rosie was very excited to see that the print versions of those books still existed and were part of SLQ collections. The State Library of Queensland has copies of material relating to the Queensland Aboriginal communities; further details including indexes can be viewed at Norman Tindale Genealogical Collection Michael Aird presenting a session on the Tindale Genealogical collection Gambara Gamu Biyu – this interactive Body Chart features nine Aboriginal and Torres Strait Islander languages from across Queensland; it utilises the technology known as a language pen. These charts will be available in the Indigenous Knowledge Centres as well as selected public libraries from the nine language regions. There are two versions of the digital story; a two-minute snapshot and the full seven-minute story; both versions are viewable on the SLQ Vimeo Channel. Something to think about In Queensland there are over Aboriginal and Torres Strait Islander languages or dialects; less than 20 of these are spoken on a daily basis: What is the name of your local language group? Do you know any Aboriginal or Torres Strait Islander words? Are there any Aboriginal or Torres Strait Islander place names in your community, town or suburb? The State Library of Queensland has produced an Indigenous languages map for Queensland; this might be a good starting point to explore these questions. Please feel free to comment on this blog if you have any further information, ideas, feedback or experiences relating to Indigenous languages. Crump and Gemma Hayes [Gemma Hayes is undertaking a Masters in Information Studies in Librarianship through the University of Canberra and acted as an assistant for the workshop as part of her studies – Gemma is also our guest blogger.

## 2: 5 Languages That Could Change the Way You See the World - Facts So Romantic - Nautilus

*Though most Kuuk Thaayorre speakers prefer to use this language in the home and for social interaction, English is the language of most official institutions in the community such as the school, church, store, police station, cultural center, and council.*

Think about this sentence. But what does it actually tell you—or, more to the point, what does it not tell you? The way that different languages convey information has fascinated linguists, anthropologists, and psychologists for decades. But researchers later found more nuanced ways that these habits of speech can affect our thinking. Linguist Roman Jakobson described this line of investigation thus: These five languages reveal how information can be expressed in extremely different ways, and how these habits of thinking can affect us. Objects and people exist to the left, right, in front, and to the back of you. You move forward and backward in relation to the direction you are facing. In the same way that English-speaking infants learn to use different tenses when they speak, so do Guugu Ymathirr children learn to orient themselves along compass lines, not relative to themselves. Other studies have shown that speakers of languages that use cardinal directions to express locations have fantastic spatial memory and navigation skills—perhaps because their experience of an event is so well-defined by the directions it took place in. Like Guugu Ymathirr, it uses cardinal directions to express locations. In a series of experiments, the linguists had Kuuk Thaayorre speakers put a sequential series of cards in order—one which showed a man aging, another of a crocodile growing, and of a person eating a banana. The speakers were sat at tables during the experiment, once facing south, and another time facing north. By contrast, English speakers doing the same experiment always arranged the cards from left to right—the direction in which we read. For the Kuuk Thaayorre speakers, the passage of time was intimately tied to the cardinal directions. According to some linguists, all individual languages have a set of specific color terms that partition the visible color spectrum. A Language That Makes You Provide Evidence In Nuevo San Juan, Peru, the Matses people speak with what seems to be great care, making sure that every single piece of information they communicate is true as far as they know at the time of speaking. Each uttered sentence follows a different verb form depending on how you know the information you are imparting, and when you last knew it to be true. The language has a huge array of specific terms for information such as facts that have been inferred in the recent and distant past, conjectures about different points in the past, and information that is being recounted as a memory. He says that what distinguishes Matses from other languages that require speakers to give evidence for what they are saying is that Matses has one set of verb endings for the source of the knowledge and another, separate way of conveying how true, or valid the information is, and how certain they are about it. Interestingly, there is no way of denoting that a piece of information is hearsay, myth, or history. Instead, speakers impart this kind of information as a quote, or else as being information that was inferred within the recent past. In it he detailed a language unlike any other. Is number cognition possible without a numerical system? They were able to recreate rows containing two or three batteries, but not anything above that.
