2: The Best 33+ L Shaped Bar Plans Free Free Download PDF Video

Rustic L-shaped Bar Basement Design Ideas, Pictures, Remodel and Decor Find this Pin and more on homie by Crissi Schewe. I would like to do a bar area like this in our basement!

As you might imagine, I have built many bars over the years for customers. In fact I remodeled real bars in drinking establishments! Finally, I have one of my own! Simple Job Building a wet bar is fairly simple. The tough part of the job is selecting finish materials. There are just so many possibilities! I happened to select cherry wainscoting for the front of my wet bar. This product matched perfectly some wonderful cherry Merrilat cabinets that I have in the same room. The wainscoting was supplied by New England Classic. This is a wonderful company that has all sorts of natural wood and paint grade wainscoting that is custom designed for your personal application or job. You simply send them the dimensions of what you want to do and they come up with a design using their standard parts. A wet bar wall needs to support a top and shelves that might be on the bartender side. It is not a big deal. The biggest hazard or challenge is offsetting the possibility of tipping the bar over. A U-shaped bar is obviously the best design. A curved wall is also very strong but presents all sorts of challenges to build. My L-shaped bar with a short wing wall turned out to be very stable.

Critical Dimensions The finished height of a bar should be 42 inches. Try not to deviate from this too much. The front overhang for the patron side of the bar should be 12 inches if you intend to have bar stools. If it is just a standing only bar, a 6 or 9 inch overhang will work fine. The overhang for the bartender side is a function of your overall design. But keep in mind the rotational force of the bar top if it is a heavy stone product! If the top is not balanced to a large degree, it can exert a force on its own that would make the bar want to lean or tip over. I centered my top on the bar wall for the most part. The wider the wall the more stability you produce. Make sure you have outlets at the right places for anything you intend to have behind the bar.

Lighting Indirect lighting, hanging fixtures, recessed lights, etc. Creative lighting can really enhance a wet bar. Visit a true lighting showroom, not a big box store, and get some suggestions from the salespeople.

Granite Tops I love natural stone! My granite bar top gets all sorts of compliments. It is a deep green granite with large quartz crystals. There is a hint of blue in my top as well. Dark granites are easy to care for. If you decide to go with granite you **MUST** meet with the granite fabricator before you build your walls! The granite supplier will tell you how he intends to mount the top and what the rough height of the wall should be. This steel plate was screwed to the wall and the granite was epoxied to the steel. The advantage of the steel is that it supports the stone and makes it virtually impossible for the stone to crack as people lean against it. I have thick granite, but you never know how many high school football players might lean against the edge of the bar or foolishly sit on the edge! You must plan for these crazy events. The cabinet design has been done by the cabinet provider. I plan on building a wall for the front of the bar with 2x6s, just as you're commending and for the same reasons. However, my front bar will actually consist of two separate walls because I have columns in my basement that will have to be incorporated into the bar. This is a good thing sort of because it will allow me to connect my bar wall to the wall on one end and the column on the other and the second section will be connected to a column on each side. I plan on using a granite top but was wondering if I need to steel plate or if I can use wood corbels and maybe steel brackets?

3: L Shaped Bar Plans - WoodWorking Projects & Plans

This is the L Shaped Bar Plans Free Free Download Woodworking Plans and Projects category of information. The Internet's original and largest free woodworking plans and projects video links.

Us Our "Classic" plans are designed for those of us who love to make things with our hands; people who typically have a well equipped workshop, and are determined to turn every project into a masterpiece! These plans are no harder to build than the others, they are simply more detailed, and may take longer to complete. These bars require only average woodworking knowledge and equipment to build. The coved contour of the arm rail illustrated here is accurately machined using an easy setup on a standard table saw! Our plans include complete step-by-step instructions with illustrations showing exactly how it is done. If you prefer, you can use pre-machined arm rail moldings to cut down on machine time. Plans for the Classic L-shaped models are available in the standard layout shown and the reversed mirror image layout, as well as equal length sides. Features for Classic models Include: To make the parts, you should have a table saw, router, jig saw and an electric drill. To assemble your bar you will need some basic hand tools such as a hammer, power screwdriver and gluing clamps. Costs of all hardware including door hinges, custom cut mirrors, door glass, special fasteners, brass foot rail and brackets are included in the estimates. Costs of materials will fluctuate, and retail prices vary by locality. Model HB If you like to serve fresh draft beer, our "Corner Bar" design can fit a full size keg beer cooler with built in draft tower and provides plenty of counter area for drink preparation. There is also lots of space for glassware under the serving bar top. The lift gate is included in the plans but can be omitted from the bar without making any changes to the plans. You also have the option of machining the "comfort-coved" arm rail using your table saw and router complete instructions are provided in the plans or you can purchase pre-made arm rail moldings. We also provide instructions and illustrations in the plans showing how to assemble your bar to produce a reversed or "mirrored" bar layout. The bar top and countertop surfaces are protected against spills and water stains by plastic laminate. This is particularly important for any wet bar. The armrail provides the warm feeling of wood with rounded edges and radiused corners for the comfort of your guests. This estimate which is itemized in the plans includes all wood used, all hardware including sink, faucet, door hinges, shelf brackets, plastic laminate and all finishing materials. A brass foot rail can be added if desired. This wet bar provides comfortable seating for up to 6 of your guests! Get the Classic 9 plans bundle below! The full length counter height worktop area provides plenty of space for mixing and serving. It can be used as a wet bar sink when plumbing lines are available or, as a dry sink, it can be filled with ice to "quick chill" your favorite beverages. Next to the sink, a recess is provided where you can install the mid-size compact refrigerator 2. The base cabinet to the left provides storage for bottles, glassware, etc and is designed to accept shelving mounted on adjustable brackets. Our easy to use plans will provide the help you need to build your "ultimate" home bar. The plans include a built-in liquor cabinet with glass doors and wine rack. The liquor cabinet and wine rack are separate modules that can be placed anywhere under the bar top or omitted if desired. This model is loaded with features including the ability to accept an optional 2. At only 54" long, this compact bar is right at home in a small room and is packed with features usually only found in full size bars. Comfort coved arm rail - Our plans provide complete machining details and setup information for making the arm rail molding using your table saw. If you would prefer not to make the molding yourself, you can use the Rockler arm rail molding without making any changes to the plans. Recessed mixing counter - Accommodates stainless steel "lift-out" dry sink which can be used as an ice bin or for quick chilling of wine bottles or beverage cans. Heavy Duty drawer - 5" deep drawer mounted on full extension ball bearing easy-to-mount drawer slides rated at lbs load for lasting durability. The drawer body glides underneath the dry sink for maximum usage of space. Drawer installation is simplified through the use of our unique drawer housing design. No need to struggle with working in a confined space. Liquor cabinet below drawer - Plenty of storage for tall bottles and other accessories enclosed with hinged door. Right side door is optional - Details are provided to enclose the right hand side of the cabinet base with a full height door and to install an adjustable intermediate shelf. Space for compact refrigerator - Simply omit the door and shelf parts from the

right hand side and you are left with enough space to put a 2. Optional Brass foot railing - Extra strong base design permits the use of "bar mount" foot rail brackets eliminating the need for "floor support" or combination brackets. Raised panel front design - Simplified design for vertical front moldings provides an attractive appearance to the front and sides of the bar. Sectional assembly - Constructed in three sections base, body and top each assembly is illustrated using "exploded view" 3 Dimensional drawings with complete step-by-step instructions. Complete documentation - 17 pages complete with materials and hardware lists, cutting list, cutting diagrams, sub-assembly and final assembly drawings, cross sections, complete details of all parts, drawer assembly drawing and complete information on how to make the coved arm rail. The upper section has lots of room for bottles, steins, and collectables. The back wall mirror adds "depth" to the display. The counter top is designed to accept a standard size stainless steel bar sink which of course, is optional. Best of all, our plans make this beauty easy to build Model BB Corner Back Bar Plans - The counter top is designed to accept an optional stainless steel bar sink. Design features an adjustable TV shelf in the top section with adjustable glass storage shelves above the sink area. Comes with details for optional glass doors to enclose the top shelf. Your purchase includes ALL 9 "Classic" Bar Plans for the bar designs shown above making it easier for you customize your bar if you desire. Each plan is an individual PDF file delivered immediately after checkout. Each file can be saved to your local device drive, printed as needed, and can be re-downloaded for a full year after purchase.

4: 45° L Shaped Home Bar Plans

I am looking for FREE L-shaped bar plans that will compliment the rough cut oak countertop we just found. Does anyone know of a free design site or plans.

Plans Are you looking for simplified plans to build your bar? Our Speedy-Build models are designed for the amateur woodworker or handyperson. They can be built in a weekend or less, and require only basic equipment and tools to construct. They are designed using standard building materials including plywood, framing lumber and standard moldings. This makes them our simplest and most economical bars to build. Our easy-to-use plans are professionally designed and fully illustrated using 3 dimensional assembly drawings. No need to buy a brass foot rail. Inside surfaces are flat, making it easy to add special features such as a wine rack, adjustable shelves or even a 2. Speedy-Build Bar Plans are designed using standard dimensional lumber. Just cut the boards and moldings to length. All materials, including stain and finishes can be purchased from your local Home Center store. Plenty of open storage behind the bar. Build as shown, or build opposite configuration. Clean lines inside and out. All framing is concealed. Bottom shelf is removable, so area below can be used for utility lines. Bar can be separated into three sections for transporting. You can add your own wine rack, other accessories, or even a 2. Model L2-OS Average cost to build: Same specs as above. Average cost to build: Housing accommodates standard size keg refrigerators up to 24" wide x 26" deep. Kegerator door is flush with the cabinetry for a built-in look. Top cutout allows for beer tower and access to glassware storage below. Can be separated into three sections for transporting. Add running water to your bar. Recessed counter accommodates a standard 15" x 15" drop-in stainless steel bar sink. Top cutout insures easy access to counter area. Lower section can hold a 1. Build as shown or build opposite configuration. Mixing counter accommodates a lift-out stainless steel pan for use as an ice bin. Top cutout insures easy access to mixing counter area. Stationary or portable, this is our easiest bar to build and the most economical. Made of Ponderosa Pine, it is both sturdy and lightweight. Sloped front edge on bar rail for comfort. No plywood used no sheet materials to cut. Designed using all standard dimensional lumber to practically eliminate rip cutting. Just cut standard boards to length. Can be built in 2 days or less. Accepts pre-finished shelves in standard size. Accepts up to a 10 foot umbrella with a 1. Model DB Average cost to build: Open shelving provides lots of room for glassware, mixing tools, etc. Model HB Average cost to build: Full length "Speed Rail" holds up to 10 bottles. Twin wheel locking casters. Upper section has mirrored back, stationary wood shelf and adjustable glass shelf. Plans include details for optional bar sink. Base can accept 2. Plans include an optional 4 tier bottle rack for up to 16 bottles. Model BB Average cost to build: Designed to match any Speedy-Build front bar, this back bar is less than 8 inches deep. Perfect for locations where floor space is limited. Unique wine display rack makes labels easy to see and keeps corks wet. Mirrored upper section with optional brass finish "dual access" stemware holders. Plenty of bottle storage below. The entire unit is supported by the floor but attached to the wall for a safe and secure installation. The flat back panel can also be cut out around existing wall outlets. The unit can be separated into two sections for transporting. Model S2-BB Average cost to build: Your purchase includes ALL 14 "Easy" Bar Plans for the bar designs shown above making it easier for you customize your bar if you desire. Each plan is an individual PDF file delivered immediately after checkout. Each file can be saved to your local device drive, printed as needed, and can be re-downloaded for a full year after purchase.

5: Wet Bar - Plans and Construction Tips - Ask the Builder

Woodworking Projects & Plans for "L Shaped Bar Plans": Milo L Shape Sectional By Mid-century Modern Home Gorgoeus L-shaped leather sectional sofa, Mid-Century collection, flared legs, beautiful design, free shipping, plush cushions, satisfaction guaranteed.

Now some of you are going to ask how is this farm related and my answer to that it is not. The first step is to plan where your bar is going to be and what shape you want it to be. I decided to build a dry bar without a sink and to make it L shaped. The first thing is you have to frame it. I built these walls 41 inches tall. The bar after the oak veneer plywood is added. It all depends on your budget and the look you want to go with. Then add trim pieces. Counter sink your nails with a nail set and then use stainable wood putty to fill your holes. Pretty simple so far, the next step is to build your bar top, this is where it gets a little more complicated. It cost about 12 dollars a foot but to me it is worth it. If you use a foot rail you might go with more of an overhang. You screw the bottom sheet from the top on to the frame. You then screw the top sheet onto the bottom sheet by screwing under the bottom sheet. Now you can add your bar rail to your top. You have two options here, you can go with a rounded corners or you can go with mitered corners, or you can do what I did and do one of each. Build your shelves and then add your trim, I forgot to take pictures of the shelves before I stained them. Next step is to finish off the inside walls of your bar. You can do this with drywall or if you have enough left over pieces of veneer plywood you can do what I did here. You will apply this after you have stained your bar I will show you later in this post. This is one of the two corbels I added to the bar to give it more interest and detail. You can also see in this picture how I attached the bar rail by using wood screws and screwing from under the overhang. I then added some crown molding to finish it off on top and some pine trim to go around the bottom shelf. The next step is to sand and stain your bar. I then wiped it down using a damp cloth, the damp cloth raises the grain. You do this because the stain will raise the grain in the wood and this step keeps that from happening. I then sanded the entire bar down again this time using a fine grit sand paper. I then stained the entire bar and back bar. Now your ready for your two-part epoxy finish on the bar top. First you must make sure your bar top is clean and dry. They must be of exact equal parts or it will not harden. The epoxy is self leveling. This epoxy just goes on the flat part of the top, you will use polyurethane for the Chicago bar rail and the trim and the rest of the bar. I then let that dry completely and roughed it up with some sand paper and then put down another quart. You could also put down baseball cards or pictures or other memorabilia on your bar top before you pour out the epoxy to have them embedded in the top to give it more of a personalized touch and could show your hobbies or interest. If you do that you will have to add a second layer, and you do that by letting the first application dry completely, then sand the area using a medium grit sand paper and then do another pour. You can keep doing this step if you want to embed something thicker like bottle cap. The two-part epoxy gives your bar a glass look and protects your top from spills. After the first coat dries, sand it down using steel wool and then put on another coat. It does take some time to do it right but it is worth it. All the parts for this bar was purchased at my local Home Depot except the Chicago bar rail. I bought the bar stools at an auction where the restaurant was going out of business, they matched perfectly with the stain and style of bar I chose to build. I have also added photos of the rest of my bar down below. If anyone has any questions on how to build a bar you can ask them here on this post, no matter how old this post is. I will be happy to answer them if I can. Name your bar after getting it done. This great little bar was built by Jake, one of my readers This is how Jake did his shelving, this is exactly how I did mine. I love Jakes idea of putting lights under his bar top. This is a picture of a bar one of my readers, Adam Urbach built after reading my post. Nice job Adam This nice bar was built by one of my readers Cy Kollar Cy did a good job on the shelves This bar was done by Matt Hines who likes to brew is own home brew. Matt built a place for his keggerator into his shelves. I really like what Matt did for the back bar. I am just waiting now for my invite to try some of the home brew. This works out great, its the plywood that gives the frame its strength. The detail is solid oak skirting board. And the resin top turned out fantastic " that was a great idea, thanks. I have really enjoyed doing it. What a great idea. These next four bar pictures are from Frank Chenette. I like his

L SHAPED BAR PLANS pdf

better than my own. I like how this bar fits in real well with the brick work. Keep the pictures coming in, I love how tis post keeps growing. This is the finished bar and this is what Mike had to say about his project. Good show old boy, as we say here. I like the look and corbels on this one, nice job on the back bar too.

Even though the plans provided in them are more suited to the needs of professional and advanced woodworkers, the suggestions and guidance offered can even make the most ignorant person successfully complete any L Shaped Bar Plans Free woodwork projects. Professionals find the free plans useful because it helps them save time in creating designs for their clients. These plans are very user friendly which helps in making each woodworking project enjoyable and simple. These online plans offer more options to woodworkers than any other sources. You can find the perfect woodworking plan according to your level of expertise or desired need. There are plans for beginners, professional and weekend hobbyists. For newcomers, these plans are a must have package as they are very simple to use and contain colored images of the highest quality and detailed instructions stepwise for every woodworking projects. Many of these L Shaped Bar Plans Free free woodworking plans online allow you to access thousands of ideas to assist you in building your project in a quick and professional way. You get blue prints, images and materials when you download these plans from the net. It does not matter whether you are skilled or not, these detailed instructions will assist you all through your project till you have completed it successfully. You will also get tips on how to start a woodwork business from some of the free woodwork plans online. These L Shaped Bar Plans Free woodworking plans also have few limitations to speak of, though these are minor ones compared to the advantages you gain from them. One of the common complaints about free plan software is the time which is taken for it to get downloaded completely. These plans are quite vast and if the internet is slow, it might take you hours to download the whole L Shaped Bar Plans Free plan. The other disadvantage of free plan is that the measurement provided is of a specific kind even though both kinds of measurement systems are available. You lose time by making the effort to convert the measurements into your kind of measurement system. On the whole, any of the free plan software are great and every woodworker can greatly benefit from the plan packages for building woodworking projects in a confident and successful way. The free woodworking plans are worthy of a trial. This is true, especially, when you need assistance in your woodworking skill, while working on a specific project. You can select from the vast amount of plans available in the free L Shaped Bar Plans Free woodworking plans online, which are offered by expert and experienced woodworkers. If you do not have the proper information, instruction, and skill, you may land up spending more money and time than you originally intended to spend. As a beginner woodworker, you need have the space, time and the correct tools. Having said, there are a few essential factors that you should keep in mind, before starting with any woodworking project. If you are beginner, you should first need to be very interested in woodworking. Creating something new with your own hands is a special feeling. Do not start a project if you are not interested, as this may land you in a bad place. Think of the main reason of creating this woodworking project. Decide on the uses of the item you are making. Consider your skills and analyze the time you have, before you start with a project. Start projects that you can finish. If you are in the middle of some work, then it is better not to start any project at all. If you keep these essential points in mind before you begin a L Shaped Bar Plans Free woodworking project, it will become very easy for you to achieve success. Woodwork requires planning as much as it requires effort. So how do you get started? As a beginner, always select a project that has a very basic build up or a simple construction. Some easy to begin projects include, bird feeder, benches, shelves, etc. As soon as you get hold of the techniques, you can always move to the next level of woodworking projects, like cabinets, sheds and others. Beginning projects should always be less complicated and less frustrating so that you have a better knowledge of working with woods and their tools. Once the project is selected, start selecting your tools. Many people think that power tools are needs.

However, for beginners basic hand tools can be very handy and more than helpful in completing a project. If woodworking is your hobby, then a few tools that you would require are: Workbench - A workbench is required for precise cuts and measurements. The workbench when fixed with vises offer ample space to work. Hammer - Hammer is an essential tool for woodworks. It helps you to drive nails, pins, staples, etc. A small and lightweight hammer will make things much easy for you. When you buy a hammer, always check the balance between the weight and stand. Always select a sturdy, yet lightweight product. Saw - A saw is another tool that you cannot live without while woodworking. This tool helps you to cut woods at different sizes. There are different types of saws available in the market. Choose a size that you can handle. Screwdriver - Screwdrivers are available in different shapes and sizes. Mostly there are Canadian types and standard flat type. Having all of them will help you in advance woodworking. You can also buy power screwdrivers as they make the work much faster. Measuring tape - It is another very important tool that you cannot work without. The measuring tape helps you to measure wood before they can be attached together. Wrench - Some woodworking projects require fixing bolts and fixes. For such projects, you require wrench. However, this is not a tool for beginners, but having it would make work easier for you at a later stage. Drill - Drill helps you make holes in wood. Power drills are more useful but they cost more. Low wattage power drills will make the task much easy. Other small and basic tools - These include pencils, gum, staple gum, level, erase, first aid kit and shop vac. Based on the type of project you want to complete, pricing can be determined. The simple the project, the less cost it involves. However, at the very beginning buying the tools will be a little hefty. Therefore, it is better to fix a budget first on the tools, then on the project. Buying the basic tools will ensure that you do not need to buy any more material other than the wood ply. It is like the woodworking Bible. Instructions guide is a very easy to understand process, what to do and how to do it. It is a systematic guide for completing the project. Time also plays an important role in the building of woodworking projects. Woodworking projects require time and therefore it is necessary for a beginner to have ample amount of time every week. L-shaped home wet bar The Easy Home Bar Plans â„¢ collection of Home Bar Designs helps you build beautiful and functional home bars that will last for generations. These plans deliver professional looking results without the need of fancy woodworking tools or techniques.

Building the frame of the base The first step of the woodworking project is to build the base of the bar. Cut the components at the right size and lock them together with galvanized screws. Make sure the corners are right-angled. Make sure there are no gaps between the plywood and the frame and check if the edges are flush. Fitting the bar walls Continue the project by attaching the sides and the partitions of the bar to the base. Drill pocket holes at both ends, take accurate measurements and lock the plywood pieces to the base with galvanized screws. Add waterproof glue to the joints and make sure the corners are right-angled. Attaching the front face Add the face of the bar to the frame, as described in the diagram. Align the components with great care and make sure the edges are flush. Add glue to enhance the rigidity of the joints. Add waterproof glue to the joints and remove the excess with a damp cloth. Attaching the bar top Building the countertop for the bar is a straight forward process. Clamp the pieces of plywood tightly, in order to create a proper bong between them. Lay the countertop on a level surface and center the frame of the bar as in the image. Building the bottle supports The next step of the project is to build the bottle supports. Afterwards, split the slats into half along the cut line and smooth the edges with sandpaper. Drill pocket holes to both sides of the supports and secure them to the supports. You could adjust the height at which you place the supports in order to get a professional result. Fitting the trims One of the last steps of the project is to attach the trims to the base and to the top of the bar. Work with attention and add glue to enhance the bond of the trims to the bar. Free bar plans Last but not least, we recommend you to take care of the finishing touches. Fill the holes with wood filler and let it to dry out for several hours. Afterwards, smooth the wooden surface with fine-grit sandpaper and vacuum the residues. Apply several coats of stain or paint to the wooden components, if you want to protect them from decay and to enhance the look of the bar.
