

1: LARGE INDUSTRIAL SITE FOR SALE

List of industrial parks or estates by land area. Kizad Khalifa Industrial Zone, Abu Dhabi (Kizad), United Arab Emirates. www.enganchecubano.com completed, the square kilometres (, acres) Kizad site will become one of the Middle East's largest industrial free-trade and non-free trade zones.

The roughly acres, he says, is easily assessable to rail traffic, as well as being only a pitching wedge away from Interstates 95 and Now he hopes that the sites recent selection by the North Carolina Railroad as a Best Large Industrial Site will encourage some interest in the property by a large industry one that will hire a large number of local workers and pay good wages. We need a home run, Caton said. Id like to see if we can bring in a nice company that will hire to workers and pay good wages. That would give us some excitement in this county. The site, which extends from N. Department of Commerce, meaning that it is shovel ready for development. Four categories of sites were evaluated; large industrial rail sites, small industrial rail sites, distribution center sites, and best presentation. The firm of McCallum Sweeney Consulting, which provides site selection services and economic development consulting to businesses and organizations worldwide, judged the sites based on such criteria as proximity and access to rail lines, roads and air service; presence of utilities, including electricity, natural gas, and water; and actual usable acreage. We were pleased to have received 34 entries from local economic development organizations, said Richard Wiley, senior consultant for economic development for NCCR. Last year numerous new industries located in North Carolina because we had available sites with access to rail, creating hundreds of jobs. Greg Cummings, director of Robeson Countys Office of Economic Development, said the I Eagle Site has many infrastructure strengths that national and international warehouse distribution centers are seeking. The fact that this site has been selected as one of the best large rail sites in North Carolina is another marketing tool we can use for this property, Cummings said. That designation is definitely going to be an advantage for Robeson County. Wayne Horne, chairman of the Robeson County Committee of , said that more and more industries are starting to look at rail access when considering a site to develop. Cost of transportation is now a big factor, he said. Horne, whose organization helped fund the cost of getting state certification for the site, said that because the property is shovel ready it is more attractive to some industries looking for a new location to conduct business. A state certified site is shovel ready so they can start construction right away, he said It moves the construction process up about six months. Noah Woods, chairman of the Robeson County Board of Commissioners, also said that he believes the sites designation as one of the best large rail sites in the state will go a long way in marketing the site to a business partial to freight distribution of its goods. It says that we are working hard and doing something right, he said.

2: Vilonia Large Industrial Site

A LARGE industrial site at Snaygill Industrial Estate, Skipton, has been put up for sale on behalf of administrators for Norvap and Norvap Engineering. The acre site, off Keighley Road.

By Brent Lathrop Posted on Apr 13, 0 Comments A strong industrial website is important for setting the tone with your customers, regardless of your industry vertical. Long gone are the days when you could get by with a sub-par industrial website. Well, I was wrong. I was surprised to see hundreds that missed the mark – many by a long shot. The requirements to make this list of best industrial websites were pretty simple. To rank, a site needed to: The companies and teams behind these industrial websites were also very purposeful in their use of messaging and calls-to-action CTAs. There are over eighteen different available translations of the website. Browsing their product lines, you can see there is a standard that ties all the imagery together – cutouts surrounded by generous amounts of white space. This allows users to focus on the products themselves, rather than being distracted by the quality or lack thereof of the images or the surroundings. Having an online catalog of 1. The temptation would be to throw a lot of information on the home page and overwhelm the user. Grainger does a nice job of keeping its home page clean. The use of a small area for the rotating marketing messages is a nice, simple touch. Grainger knows their customer base very well. Many of their users are repeat buyers and often purchase the same items. Not sure what the difference is? Grainger nails it with their adaptive experience, which was the right call. Dow handles this problem by clearly defining 10 target markets and solutions in its main navigation, along with case studies within each category. The Dow site is well organized and easy to navigate. I also like the use of subtle movement in the images that rotate on the home page. By combining still images in the foreground with looped video in the background – such as rippling water or rapidly moving clouds – the site delivers a unique feel. Instead of a large background image, slider, or hero image, they have a segmented hero with some nice hover animations for each of the CTAs. On tablet and mobile, they used a technique that shows the user a little sliver of the CTAs so they know there is content off screen – encouraging a swipe. Everything from the scroll animation to the layout and use of imagery gives the user very clear paths to whatever content they may be looking for. They also included a section for recruiting on the home page. The internal pages have some beautiful photography and have a nice flow to them. Also, if you want to learn about the company history, they have a useful timeline slider on the About page that displays company milestones. The internal pages use a static left sidebar navigation for all the sub-pages – something that is hard to pull off, but the AGCO site does it very effectively with strong typography. When navigating through the AGCO site, there is no doubt that they are an agricultural machinery company since they feature a strong agricultural image on nearly every single page. It looks great, has a nice flow, and is simple to use. Much like the product calculator, the user experience for the locator is well thought out. The short documentary tells you about their processes and how they collaborate internally, with the added benefit of making their company seem more personal. The title of the current sub-page is underlined in this menu, letting users know which page they are on. The hover navigation directly below the hero image on the home page is a great touch. It shows you all the Lear products that are used in a car and where they can be found by arranging those products in the shape of a vehicle. Take functionality or sections from the sites you like and ask yourself if they would be applicable for your users. Reviewing other websites is an important part of the web development process – especially if you want to have one of the best industrial websites out there. Working diligently to develop a strong idea of your site before you go into production will pay dividends. It will create a better user experience, which will lead to more conversions – which is ultimately the entire purpose of your website, right?
