2: The 10 Best Dance Classes in San Diego, CA (for All Ages & Levels)

San Diego, under Alan Bersin, is a prototype of this approach, which one of the chapters in the volume summarizes as 'Do it fast, do it deep, and take no prisoners.'

Are the lessons located in a commercial storefront business? This suggests the teacher is looking to save money rather than providing a comfortable learning environment for the dance student. Where did the teacher learn to dance salsa? Were they professionally taught or did they pick it up in a Latin Club or from some friends. Feel free to ask where they learned to dance and how long they have been dancing salsa. Where were they trained to teach? This is a very important question to ask. Many teachers just start teaching because they are decent dancers and do not have the knowledge required to teach someone else. There is much to learn about teaching someone to dance. It is important to know and be able to dance both parts. The same thing is true for the follow part. Also, they should know about rhythms, timing and body movement. Should I take group dance classes or private salsa dance lessons? The best method for quickly learning to dance the salsa is a three part program. Also, the dance student learns about hip and foot action, which is crucial for salsa dancing. The teacher will also introduce the salsa music timing and how to start on the one or two count depending on the music. A private lesson focuses on your particular needs for dancing rather than on a group. This personalized dance instruction is very important particularly in the initial stages of learning and then later to add patterns and styling. The private salsa dance lessons should be supplemented with group dance classes to practice what the student learned in private dance lessons. A class is perfect for this since everyone in the group is in some stage of learning as well. The teacher will offer assistance with timing by counting for you and leading some practice drills for footwork variations. Lastly, it is important to go out salsa dancing in one of the local Latin clubs to actually dance salsa. Your private lesson and group class instructors can guide you to find the most comfortable venues to attend as a newcomer to salsa dancing. Generally, it is better to learn to dance the salsa in a professional teaching establishment like a dance studio with a combination of and then practice in a Latin club or Latin dance party. Learning the different Latin dance rhythms is important as part of your salsa dance lessons. Listen to some of the different types of Latin dance songs here:

July 5, Lessons from SHRM San Diego: Do You Know Your Employee Strengths and Weaknesses? The annual SHRM national conference was held in San Diego, CA this year from June 27 through

The national SHRM conference is a great way to network with other HR professionals from all over the world, and also learn from industry leaders and experts. How well do your employees understand your compensation plan and philosophy? Get expert advice on talking to employees about pay. Marcus clarified the differences between employee strengths and weaknesses. Strengths are not just what we are good at and weaknesses what we are bad at. Instead, he asked us to think about those tasks that bring you strength versus those things that make you weak. They are the tasks on your to-do list that drain your energy and therefore you procrastinate doing. And, that we find ways to bring those opportunities their way instead of focusing on the tasks that the employee dislikes doing. With this approach, both the employee and the organization function better. Marcus said we spend too much time especially in the United States focusing on managing our employee weaknesses. We always want employees to improve on things that we think they are not good at. We write development plans, send them to training and have them work to improve what they are weak at. He gave a great example from his own life. He told the audience that one of his strengths is the ability to interview people. He loves and gets strength from sitting down with someone he admires to learn more about them. He comes up with a few questions that he will focus on asking people at the event. This makes the situation more like a strengthening activity than a weakening activity. Fit the job to the person. Marcus asked all of us HR folks to think about creating jobs around employees instead of vice versa. He recognized that this is a controversial point. We like to create template job description and fit people into these roles. But, if you believe in this concept – you instead of have to think about creating jobs around 1 what employees are strengthened by and 2 what are the needs of the organization. If you can find a way to match those two things up across the organization the impact can be huge. I found this session especially invigorating because it aligns with my personal beliefs about management and driving performance in the organization.

The San Diego Lessons From Abroad Conference is designed to offer study abroad returnees the opportunity to reflect on their international experiences, connect with other study abroad alumni, network with professionals from international organizations and gain important skills for their future career and academic paths.

Superintendent Alan Bersin, former U. That agenda sparked sharp conflict with the San Diego Education Association, reflected in a persistent split on the school board. Between and , the percentage of San Diego elementary schools scoring at the top rung of the statewide Academic Performance Index increased by more than a third, the number of schools in the bottom category fell from 13 to one, and the racial achievement gap narrowed. For me, five key lessons emerged from their appraisal. First, the centralized, "managed instruction" model of improvement depends critically on the presence of a personnel and managerial infrastructure and on quality curricula. Alvarado gave unstinting attention to his centerpiece "Institute for Learning" training program for principals and faculty, and to building a corps of "peer coaches" to assist teachers. But his single-minded focus on these activities resulted in a lack of attention to infrastructure and curricula. A balky human resources operation reliant on outdated technology inhibited district efforts to speed up hiring or promote more flexible staffing. As for curriculum, despite seven years of diligent work developing a carefully calibrated professional development model for literacy, by the district still had not promulgated a coherent curriculum for reading and English. Consequently, while teachers were using the prescribed methods, there was too little attention to the quality of content. Second, Bersin strengthened his hand in pursuing reform by embracing statewide accountability and later NCLB metrics. He welcomed the "imposition" of the California Academic Performance Index, using it to identify troubled schools and target professional development and resources. Moves to transfer or remove staff were stifled by work rules, while a fiscal crisis sapped funding intended for low-performing schools. The San Diego effort on this front is less a "success" than an example of what it will take to develop a focused strategy for improving chronically troubled schools. Third, San Diego shows how dramatic efforts to improve high schools may conflict with other popular reform strategies. Allowing faculty to modify curricula to fit the mission of "specialized" high schools and giving them a voice in curricular choices, and the resulting inability to standardize content, means that mentor-coaches encounter math, English, or science teachers in a dozen small schools who may teach a dozen different curricula in a dozen ways. Coaches could mentor all of these teachers on pedagogical technique yet encounter great difficulty applying uniform, consistent guidance on instruction or content. Fourth, relentless political leadership is part and parcel of being an effective district leader. What such critiques tend to downplay is that an effort to reimagine radically the way a district does business is bound to spark conflict. Moreover, his approach threw a spotlight on board votes and helped him hold together his bloc for nearly seven years. So, we should be skeptical of suggestions that he could have fared much better merely by being kinder and gentler. Finally, perhaps the most important lesson from San Diego is how limited the prospects are for radical improvement in urban public education absent structural change to personnel systems, technology, accountability, leadership, and compensation. An outdated information system meant the district had to try to build on the fly the tools it needed to enable serious improvements to school accountability, human resource management, and budgeting. Bersin began his tenure with multiple advantages, including dazzling local and national contacts, personal charisma, a facile mind, polished negotiating skills, impeccable public service credentials, and a deft fundraising touch. If the legacy of his seven-year run is in doubt, the San Diego experience illustrates, above all, that even the boldest attempts to overhaul urban schooling are today undermined by the same institutional and organizational failings that they are intended to address. Hess is director of education policy studies and a resident scholar at the American Enterprise Institute. He is the editor of Urban School Reform:
