Please leave this field empty. The complete set of 41 durable plastic stencils includes: All 41 playground stencils are included with the complete Peaceful Playgrounds Program Kit. Stewart Elementary School recently painted a United States map on the back patio of the school playground. Upon arrival to school the next morning, students were mesmerized by the site and have continuously played games on the map. There is little playground equipment at the school, and this map gives students an option that is both educational and fun. Teachers also use this map to reinforce lessons on the states and regions of the United States. By having resources such as this map available to them, teachers are able to enhance the education of all students at the school. I want to thank you for helping me with the stencil. The stencil was a lot of help and the Eagle Scout project was a great success. Your company was very helpful in giving me the things I needed and helping me with everything. The stencil was easy to use and created a great teaching tool for the students. Thank you very much – Matt Molle Two Tracy Girl Scouts are Golden The stated mission of the Girl Scouts is to build confidence, courage and character while making the world a better place. On May 22, the organization will recognize two Tracy girls who delivered on this promise. She acquired stencils from the organization, then measured and painted a colorful series of lessons and games around the playground.

A room or outdoor space How to use the mapping tool: To create a new map, choose: Choose a floor or outdoor surface. Pick a color for the floor or outdoor surface. For furniture, click on the red chair at the top left of the map tool. For outdoor items, click on the green tree. If you want to add an item that is not shown, you can use the drawing tool button with marker on it to draw a picture of it. To move the items into the map, click on the item to pick it up, move it where you want it in the map, and then click on it again to drop it. Position the items exactly where you want them in the map by using the tools along the bottom. A line of text will appear. Click on the line of text and then type over it to change it to whatever you want it to say. Now ask your child to use the map to find the treasure. As she looks for it, give her clues by using position words. Show her how to mark its location on the map. Understanding even simple maps can be challenging for a young child. You may first want to try this activity by hiding the treasure and then giving hints with only your words. Challenge your child to a shape guessing game by using the shapes that are available in the mapping tool. Click and drag a shape into the layout. Ask your child to name the shape and count the sides. A shape with 3 sides is a triangle. Continue this activity with other shapes. Put small toys or candies into a box and hide it somewhere outside. For older kids, ask them to name items in the map and spell them for you. Introduce kids to new vocabulary by typing labels for items in your map that might be unfamiliar to your child.

Every School Should Have a Playground Map! Playground maps are great teaching tools! Thanks to Ed Bonne, "the Playground Map Guy," many kids soon might have a new addition to their playgrounds.

Playground maps are great teaching tools! Thanks to Ed Bonne, "the Playground Map Guy," many kids soon might have a new addition to their playgrounds. Ed Bonne is a second-grade teacher in St. I decided that I wanted one at my school, so I painted it. When other principals saw it, they wanted one at their schools too! He lays down his wooden stencils and spray paints a series of stenciled dots on the asphalt. Then he uses traffic zone paint to connect the huge dot-to-dot map. Four hours later, Bonne blows out of town leaving behind a beautiful U. If the map is to be painted to scale, I need an area about 50 feet wide so students can see how far away Hawaii is from the continental states and how large Alaska is. Bonne has painted playground maps in parking lots, on basketball courts, and in rare instances on asphalt lots made just for maps! There, a crack in the paved lot on which he painted the map falls almost exactly in the position of the Continental Divide! Outline the shape you want, then fill in the details when you actually paint it. Paint your map on asphalt. Although concrete is generally smoother and therefore better for chalk drawing, traffic zone paving paint tends to "bubble" on concrete in a shorter period of time. On asphalt, the paint could last up to ten years under normal circumstances. When painting, use a brush that will give you a line about 1 inch wide. A smaller brush will not apply enough paint to wear well. A larger brush will not allow you to outline the states as accurately as you might want. Try to place your map on a spot where you can paint it with the proper directional orientation. And try to place your map in an area where you can include Hawaii and Alaska in their correct size and location relative to the 48 contiguous states. If possible, try to place your map in a relatively protected area. You will be amazed how often you can use the map, even in winter, if you are in a spot that is reasonably comfortable and away from the wind. Avoid painting in the names of the states. Let the students do that as an activity. Remember this is an activity center, not a giant wall map laid flat. I would suggest that you try to use a scale of 1 inch to 10 miles. That will make your map about 30 feet wide from Maine to California, which will allow you to paint the map well within the size of a normal elementary school gym, should you want a map inside. They can paint major political, physical, or other geographic information on the map. State names and their capitals are usually a good first activity to do with students. Prior to that position, Bonne was a second grade teacher for more than a dozen years and a high school history and geography teacher for 14 years. Bonne also is active in the Michigan Geographic Alliance.

4: School Playground Stencils

Geography, Art. This activity will help students become familiar with maps as representations of real scenes and with map keys. Each student will create a map and a map key, understand that a map shows the view from above, and use a map key to interpret symbols and to locate places and objects on a map.

Ed Bonne, "The Playground Map Guy," offers a collection of student-centered activities for making playground maps come to life. Ed Bonne recommends using tempera paints for most activities. Tempera paints come in a variety of bright colors, and they are easily washable. A hose or rain or snow usually cleans off the map. Bonne suggests that for most activities, it is probably a good idea to assign students to a particular place or location rather than to allow volunteering. That reduces duplication and ensures a more even distribution of the students around the map when they are actually working. To ensure accuracy, before students paint on the playground map it might be a good idea to review on desk maps or in atlases the exact locations they plan to paint on the playground map. The list below first presents a handful of suggestions for long-term projects involving a playground map, followed by a bunch of "quick" activities that might be used as part of a lesson or unit. Invite students to paint in the proper location on the map the names of major cities, prominent natural features, and national parks. Suggested lists of natural features and national parks appear below. Take a Tour of the U. Students often learn more about general locations by studying a single place intensely. Provide students with a list of possible "places to study. Allow two to four weeks for the students to research and construct their models with parent supervision. A model on a 1-foot-square board is suggested. When all the models have been gathered, have students place them on the correct spots on the U. The opportunities for discussion of the various locations are boundless. When all students have become familiar with the locations, you could invite parents or other students to take a tour of the United States led by these special "tour guides. This project provides an opportunity for each student to research and develop an appreciation for a single state. In addition to conducting research, the student has a chance to write a play or revue about the United States. Each student chooses a character to research. The student then writes a script for their characters for a "show" about the United States. The map becomes the stage for their presentation. You might involve the art teacher, who could work with each student to draw a mural backdrop for the presentation, or the music teacher, who could teach students regional songs that would become part of this "extravaganza. Part of the elementary health curriculum is an extensive study of the five basic food groups. Students in a school could host a "tasting" party of foods from across the United States. Place sample foods on trays on upturned milk crates in the actual location where the food is produced. Invite students to research the major crops grown and products produced in each state. They can draw pictures of those crops and products for display on the playground map. When you read stories or historical accounts, use the map as your "reading room. If it can be done on a desk map, why not the same activity on the playground map? Locations of Native American tribes, expansion of U. Devise state-to-state relay races for your playground map, or set up portable basketball hoops at various distances for free-throw practice. In addition to that "What I Did on My Summer Vacation" essay, students might chalk out the route that their summer vacation took them on. If you have an evening activity at school, schedule time for the students to go out on the map with flashlights. Place the lights facing up at major metropolitan areas. The map will look like the United States as the astronauts see it at night. Super Bowl or World Series. Place balls for a particular sport on the locations of the major league franchises. This is a great activity to generate discussion about major metropolitan areas. Ed Bonne has one last suggestion: Prior to moving to the high school, Bonne taught second grade for more than a dozen years; and before that he was a high school history and geography teacher for 14 years. Bonne is active in the Michigan Geographic Alliance.
