Practical Biochemistry for Medical Students: These have been written and organised by the School of Life Sciences in collaboration with Prof. Fraser of the School of Medicine. The aims of these practicals are to illustrate some common laboratory techniques used in biochemistry and clinical chemistry and the scientific principles upon which these are based, and to put these in a context where their relevance to clinical practice can be appreciated. Some practice and appreciation of numeracy, accuracy and precision should also be gained as a result of these exercises. The material available on these Web pages includes copies of the class manuals for each individual practical and, where appropriate, Web-based exercises and links to relevant Web sites. The class manuals can also be downloaded in Word or PDF format and viewed or printed out. If you are accessing these pages from outside the University and you do not have Acrobat Reader, you can download it free from the Adobe Web site. Students attend one of two identical sessions: You will sign up for one of these sessions before the course starts. Because of the size of the laboratory, places are limited to 40 per session. Therefore, these practicals are not compulsory; they form part of the optional element of the course. However, if you sign up to attend these classes, then you should attend them all. A certificate of attendance will be given to each student who completes the course. This certificate may be required if you intend to take a Special Study Module that involves practical laboratory work unless you have a first degree in an appropriate subject. Any student who misses two or more of the practicals without good cause notified to the course organizer will not be issued with this certificate. It is essential that you read the instructions for a particular practical **BEFORE** you come to the class otherwise you will be working "in the dark" and will not get the full benefit. Although the practicals are not specifically assessed, you may find the material helpful for answering certain questions in your formative and summative assessments. Follow the links below to the individual practical pages. If you want to find out more about any of the topics covered in these practicals, try using the Intute database of Internet resources in the health and life sciences Practical 1:
