

### 1: PENNSYLVANIA BIOTECHNOLOGY ASSOCIATION TO HOLD 8TH ANNUAL SYMPOSIUM,

*Marching Into a New Millennium [Patrick M. Jenlink] on [www.enganchecubano.com](http://www.enganchecubano.com) \*FREE\* shipping on qualifying offers. The eighth annual NCPEA Yearbook, *Marching Into A New Millennium: Challenges to Educational Leadership* speaks to the uncertainty of what awaits both professors and practitioners of educational leadership in and beyond.*

But one win could make history for the Ramblers and the sport. I national championship appearance and a chance at history. As it stands, the lowest seed to stand alone at the end of the "Big Dance" was Villanova in , who cut down the nets as a No. Other underdogs have advanced to Final Four territory before, though. Loyola-Chicago began the tournament in the South region with a narrow win over No. In the Elite Eight, the Ramblers won by a comfortable point margin against the No. Loyola-Chicago is the fourth No. The last three times a No. In , everyone was introduced to George Mason University, the first No. The Patriots are arguably the most memorable Cinderella team in the recent history of March Madness; their overtime win against No. But George Mason was unable to continue its run to the national championship. The Patriots ran into the No. While 20 years separated George Mason from the last No. They had to battle USC for the right to even play in the Round of But the Rams downed the Trojans by 13 points, beginning a Cinderella run of their own that was highlighted by four of five wins decided by 10 or more points. And despite a point win over No. There have been a few other notable low seeds to make the Final Four, especially since the turn of the century. Two seasons ago, the No. Wichita State made it to the semifinals in as a No. A pair of No. Wisconsin scored just 41 points in a point loss to No. Had Loyola-Chicago fallen to the No. The most recent squad to do so was Xavier, last year, who were upended by No. Dayton also met its demise at the hand of a No. All three teams suffered double-digit losses in those contests. Now all that stands in the way of Loyola-Chicago and a historic advancement are the Michigan Wolverines. The maize and blue are the second No. Loyola-Chicago has yet to play a No.

Marching into the Millennium At the University of Michigan In , eight students joined together to create something they thought was important to them. Bridges to the 21st Century. The conference provided both students and speakers with great memories and built new connections throughout the country. Now in , a few more students are interested in maintaining the bridges. As Arab-American students at an American University, we share a common belief that it is imperative for us to provide our peers with a clear image of what it is to be Arab in an American society. Our aim is to provide other students the tools they need to be active on their campuses and in their communities. We hope they will take with them skills to erase stereotypes, dispel lies, promote our culture and most importantly enjoy their heritage. Marching into the Millennium will contain three panels and four workshops. Each panel will have three speakers who will provide insight they have obtained and techniques they have used during their years as activists. The workshops will be in a discussion format that will last for 45 minutes. The schedule is composed of three days in which the first will be used for welcoming incoming students with an Arab- American cultural event, the second filled with panels and a keynote speaker, and finally the workshops on the third day. The following is a list of the potential panels and workshops for AASA: Marching into the Millenium. Through their music, paintings, dance, and writings they have covered many aspects of American-Arab culture and politics in the United States and in their homelands. They have used their work as a voice for the American-Arab community and for issues overseas. Through their work, American-Arab artists have also managed to remind us of our Arab heritage and the struggles that we face as a targeted community of color in the United States. American-Arab art is so crucial to our community because it helps us relate to our culture and the issues that we face on a very personal and profound level. However, because their activism is not always valued as such, it is sometimes overlooked. We hope that this panel will help participants to learn about American-Arab artists that are trying to use their culture to bring about a political change and especially how they can find and audience for their own work. Molding Media for the Millennium E-mail, hand held computers, the internet, cell phones, digital radio stations and televisions all aide in providing communication to our technologically advanced society. The evolution from print to electronic text or radio to e-mail and the respective growth that follows this advancement shows how important media is to our present society. It is now imperative to keep up with technology and especially important to maintain "market share" in this expanding environment. Our mission as Arab activists should include that of increasing our "market share", meaning an increase in the exposure, awareness, and presentation of our issues. This can only be done with proper advertising and use of the appropriate media sources. An issue, conflict or event is only as strong as the individuals who support it and the only way to increase that number is to perfect the transmission of the pertinent information. This panel will be lead by Arab-American activists who have made a difference in the exposure, awareness, and presentation of Arab-American issues utilizing the media. It will focus on technique, strategy, and resources for making a voice heard and more importantly listened to. The hope is that this will serve as an impetus for further action by the activists of the new millennium. The hope is that you too will be heard and hopefully your information will spread through your audience as fast as the technology that carries it. Although we know that most of these unfortunate situations have arisen due to political circumstances, in this panel we shall chose to disregard political aspects and focus on the living conditions that are imposed to the people of this region. There are a wide range of nations in this region who are experiencing hardships, and we hope that this panel will address these issues. This panel will place emphasis on areas that endure sanctions, are under occupation, and experience internal religious strife. We will introduce these problems to the audience so they can provide insight in respect to the pain these people suffer and the conditions they endure. Maintaining Arab Identity Arab immigrants often undergo many stresses when immigrating to the United States. The immediate

culture shock makes maintaining Arab culture and tradition a difficult task. Social forces in the United States threaten the values and traditions brought with these immigrants. Conversely, American tradition and culture is overlooked for fear of losing values inherent to Arab culture. Obviously, living with different customs and values in a foreign land can lead to many issues including discrimination, ignorance and uncertainty in ones identity. Maintaining Arab culture in an American society can be challenging. We live in an era surrounded by first and second-generation Arab families who often feel this trap. It is important for us as American-Arab students to show that it is possible to live a life that would not sacrifice any values, but would be acceptable to both societies. Hopefully, attending this workshop will enable American-Arabs to get a grasp on how to maintain an Arab culture while living in the states and more importantly how to encourage others to follow. Gender-based Dialogue for Arab-Americans Images of Middle Eastern women and men can be found in every form of popular culture in the US including art, literature, music, television, and movies. Even textbooks, educational films and documentaries and the media reinforce some of the same images. With these images come a multitude of gender-role stereotypes. Arab women are often associated with the words harem, polygamy, and belly dancer, sexy, uneducated, oppressed, and veiled. Our men are thought of as overbearing, hotheaded bullies, terrorists, oil sheiks, and masters of their wife and families. These stereotypes do not fit Arab-American culture, yet many times upon identifying ourselves as Arab Americans they seem to "barge in on us like uninvited guests". Even American feminists, whom we expect to be allies, often perpetrate the stereotype of passive, pathetic Arab women by constantly broadcasting stories of savage Arab men. The goals of this workshop will be to 1 Examine the different gender stereotypes involving Arab American men and women. Inter-group Coalition Building Building relationships with other student groups within the university community is a very important part of creating a strong and lasting student group. It is important that these ties be built from both social events as well as political meetings. This way, groups of similar interest and action can share ideas in a combined effort. Building bridges with other student groups will aid your agendas and further publicize your organization within the community. We hope that this workshop will allow the participants of the conference to communicate their success and failures in their endeavors to strengthen coalitions with other students groups, while seeking assistance from one another in gaining more recognition on their campuses. We hope that this workshop will help people gain new ideas and tactics on building bridges to other organizations. Arabs in this country have gone too long without a powerful voice. It is imperative that we unite together and take advantage of the fact that there is strength in numbers. Once American-Arabs successfully organize and utilize their efforts, the Arab voice will be listened to and taken seriously. Before we can do anything on a national level, we must first place emphasis in our own communities. This workshop is designed to deal with organizing grass-roots activism and community outreach programs. This will not only enrich the community by bringing it closer together, but will also give the community a chance to join together on addressing and resolving pertinent issues. A strong community that is united has a powerful and influential voice that cannot be ignored. We are asking for support from both departments at the University of Michigan and the Arab-American Community. With your support, we will be able to put on a better conference that would allow for a larger audience and notable speakers. The conference will be conducted during the weekend of the Martin Luther King Jr. Visit our web page at [http: Marching into the Millennium Packard Apt](http://Marching into the Millennium Packard Apt).

### 3: Marching into the Millennium: Classroom Activities for the Y | Education World

*MidLink Magazine's Millennium Issue Take a look at several interactive projects in which middle level teachers might involve their students, including Virtual Time Capsules and Stepping into the New Millennium.*

The Throughout the Millennium Web site includes a long list of Internet resources that teachers can use to introduce the evolving history of , added Waxler. Stacey Hoppenstein is the instructional technology specialist at John R. Good Elementary School in Irving, Texas. Last year, club members created the Millennium Masters Web page. They decided they wanted to share their own ideas about the new millennium and find out what other kids think. The best prediction submitted each month earns that student a Millennium Mystery T-shirt and a certificate! She added a Master the millennium lesson plan to the site. The lesson was created for third to fifth graders but, Hoppenstein notes, it could easily be adapted for use in middle or high school. The lesson challenges students to study a special "invention history" Web site and to use what they learn there to create their own inventions for the future. After students create the inventions, they use a Web publishing program to build futuristic newsletters to announce, describe, and show digital photographs of them. The first of the student-created invention newsletters will be posted on the Web page soon! What advice do you have that might help "fix" those problems? The lesson challenges students to generate a product to express their ideas for solving world problems. They are enthusiastic and willing to overcome obstacles to get something done. Other products might be posters, dioramas, sculptures, or paintings. Students can also write plays, perform dramatic presentations or dances, make models, write research reports, make time capsules, create puzzles, produce computer presentations, make games, or create photographic displays. It can be a simple project, or it can be used to extend out to the community and the world in many ways. Each teacher implements it differently. One teacher broke the students up into groups. They used Inspiration software for brainstorming and computer-aided-design software to design a solution. There is even the possibility that the work might be published in book form in the year ! The Web is full of millennium related teaching activities -- if you know where to find them! Take a look at what we found! January 1, -- So What? For people of many cultures, January 1, , is a nothing date! Figure your birth year using the Hebrew calendar and attempt challenging activities that explore the Japanese, Islamic, Chinese, and Indian calendars in a series of December The Imagination Factory is offering a Mail Your Art international mail art show for children ages 12 and under. The theme of this art show is "Living in the Mirror. Encarta provides the resources for students to learn about life in Western Europe at the time. For additional lessons, see the Encarta Millennium Lesson Collection. Time Zones and the New Year. Each child is assigned a time zone. The student selects a city in that time zone and uses selected online resources to learn more about the city and how people there might celebrate the dawn of the millennium. Explorers of the Millennium. Click on the Timeline link on Explorers of the Millennium to see which explorers the students included. Display some of those explorers around a map of the world. Challenge students to research and nominate an explorer who is not on the list. They can even submit their nominations to the kids who created this award-winning site. Each student will then write her or his own report about that person for display around the map. Students work in teams of four to solve real problems facing their communities and the world in the JumpStart contest sponsored by Parade and react magazines. Resources at this site include guidelines and entry forms, a problem-solving tip sheet for student teams, and tips for teachers as they coach students on their projects. Will watches have video displays? Will cars drive themselves? What are your predictions for the next millennium? Twenty years from now, where will you live? What type of family will you have? How will you be connected to the world? What will your house look like? The Unreal Estate activity from the Newspapers in Education arm of Long Island Newsday challenges your students to design their future. Twenty-First Century Time Capsule. In this activity, students think about, discuss, read about, write about, research, formulate, and evaluate ideas related to developments in the 20th century. The activity opens with a discussion of which item -- a cordless telephone or cell phone, a television, a CD player, or a personal computer -- would be most difficult to live without. Then the class is divided into groups to brainstorm and discuss what students believe is the most important technological development of the

20th century. Each group gives a brief argument for its choice. Then the class debates the different choices and votes for one development to represent the 20th century. After the debate, students will prepare a time capsule to be opened in years. The Picture the Future interdisciplinary learning project will engage K students. Working in teams with educators, community leaders, and professionals in many fields, young people will weave the arts, sciences, and humanities into an exploration of their own communities. They will learn about the best of the past and present and apply it to the future. Paul Getty Trust developed this project. There are problems -- some big ones. Solutions are available, though. This site explores problems and solutions concerning the environment, computers, food, space, and more. Project Millennium Family Fun Guide Find timeline activities, word games, and other printable activities related to the millennium. Our Generation, for the Millennium Something about major historical milestones makes human beings want to communicate with the future. People want to capture and convey a sense of who they are now to people who will follow. As the millennium approaches, give your students the chance to use this high-tech time capsule project. Chapters explore such questions as What did people eat? How long did people live? Did people celebrate the turn of the millennium? What was life like in the large city of Constantinople? Nominate Your Best Teacher Bonus. Who is more qualified to nominate those teachers than kids in classrooms? Greenwich This site includes a clock that counts down time to the millennium, a page of quotes relating to the concept of time, and much more. Prepared by teachers from all over the world, the curriculum is appropriate for all different levels of learning. Curriculum for elementary, middle, and high schools must be unzipped to view. Battle of the Centuries From the Library of Congress, this site summarizes the debate over when the millennium actually begins. The s This timeline of the last years includes music clips, famous speeches, and other noteworthy sounds of American culture. Time Capsule Enter a date in the box to see a page of information related to that date. Most dates between and are available. The whole world was out having a party, but not Mr. He went to bed early so he could wake up before the sun the next morning. He wanted to see the first sunrise of the year He set his digital alarm clock to wake him up early. It was a magnificent digital alarm clock, with a bright red display on the front that showed 9: Article by Gary Hopkins.
