Close Marguerite Maury Marguerite Maury was the legendary pioneer of aromatherapy. Her husband, Dr E A Maury wrote that: She subsequently gained indisputable fame through her pioneering qualities. Her first husband was killed in the First World War and she lost both her father and young son. Her father was a well known intellectual and supporter of the artist, Gustav Klimt. Marguerite obtained a degree in nursing and for a surgical assistant the highest a woman could attain in that area at the time. While she was working with a surgeon in Alsace she read a book: The author later taught R. Marguerite Maury the pioneer of aromatherapy Marguerite met Dr Maury and they shared the same love of music, art, literature and above all their aim was to aim to heal through alternative ways. Living in France, they explored homeopathy, naturopathy, osteopathy and radiesthesia. They formed a remarkable team working, researching and writing books together. It was at this time that Marguerite developed her research work to demonstrate and prove the effects of essential oils on the nervous system, their influence on the well being of people. Through her years of research and practical application, she discovered the value of the active zone aromatic particles and recorded the effects with scientific probity. She lectured and gave seminars on the subject throughout Europe and opened aromatherapy clinics in Paris, Switzerland and England. It was in Paris we first met and I came to work with her, then moving to work in the London clinic. I was privileged to be the spiritual child, pupil and disciple of Marguerite Maury. She inspired and changed my life. I have continued her work for over 30 years. She possessed some of the eccentricities of genius, but she was also one of the most generous and loveable of women, a magnetic and charismatic person. She was a veritable whirlwind of energy and enthusiasm, working ceaselessly until quite literally she died on the 25th September Her last manuscript was found beside her bed. I hope I have carried on her work as she would have wished. I think of her and appreciate her every day.

The History of Aromatherapy AD to Today It was the Persians who next made the most enduring contributions to the knowledge of aromatics and medicine. Born in the town of Rayy near Tehran, Al-Razi was known in the West as Rhazes and he had an enormous influence on European science and medicine. His medical accomplishments were legion, and he also developed tools such as mortars, flasks, spatulas and phials which were used in pharmacies until the early twentieth century. A legend is born Next came Ibn Sina , also a Persian, who was probably the most famous and influential of all the great Islamic physicians and known throughout Europe as Avicenna. His life truly was the stuff of legend. He wrote 20 books covering theology, metaphysics, astronomy, philology, philosophy and poetry, and most influentially, 20 books and treatises on medicine. This monumental medical encyclopedia included the Hippocratic and Galenic traditions, describing Syro-Arab and Indo-Persian practice plus notes on his own observations, becoming the definitive medical textbook, teaching guide and reference throughout Western Europe and the Islamic world for over seven hundred years. This early text contains a mixture of herbalism, magic, shamanism and tree lore, and describes plants, their properties, and how they can be used in amulets, baths or taken internally. When the Crusaders returned from the Holy Wars they brought back rose water, perfumes, aromatics and remedies that were previously unknown. Fragrant plants became more popular, with aromatic herb garlands decorating homes and rose water being used to wash the hands of those who could afford it. The availability and range of aromatic medicines continued to increase over the next few hundred years, but the knowledge of the Eastern physicians had not yet begun to arrive on our shores. Medieval apocalypse During the 13th and 14th centuries in Europe, medicine was almost entirely governed by the Catholic church. They considered illness and disease to be a punishment from God, and the standard form of treatment administered by the priests was prayer, and perhaps a session of blood-letting. The basic Anglo-Saxon botanical remedies such as wearing sachets of dried lavender and amulets of thyme proved no match for this deadly pandemic. Although the very first essential oils such as juniper, lavender, rosemary and sage had arrived in Britain around this time, he makes no mention of them. Gerards book proved highly influential, and the apothecaries which had previously only sold the medicines prescribed by doctors, began to to prepare and compound their own medicines too. New style apothecaries that dispensed medicines and attended to the patient began appearing throughout England. But not quickly enough. The second visitation of the Black Death in hit almost as hard as the first, and virtually every available aromatic was burned in houses and on the streets to keep the pestilence at bay. Benzoin, styrax, frankincense and various spice oils were all used to prevent the spread of this deadly disease, but to little effect. It was reported the only people not to succumb to the plague were the workers involved in aromatics and perfumery, and this is undoubtedly due to the highly antiseptic properties of the essential oils. Nicholas Culpeper was one of the most influential herbalists who also introduced the concept of astrological herbalism. Other notable herbalists such as Joseph Miller and John Parkinson would also leave a rich botanical legacy, paving the way for later generations to expand upon. The essential oil industries throughout Europe flourished, providing oils for the pharmaceutical, flavour and fragrance industries. He had the opportunity to personally test his innovative theories when an explosion in his laboratory caused a severe burn to his hand. He plunged his hand into a vessel of pure lavender oil which immediately reduced the swelling and helped accelerate the healing process. Most impressively, he was left with no scar. After graduating as a surgeon at the end of the war, Valnet continued to use essential oils to treat illnesses, and was the first ever to use them to treat psychiatric conditions. This book became the inspiration and reference for virtually every future author on the subject for almost two decades. Today we are at last unfolding the final secrets of the Egyptian mysteries, revealing aromatherapy to be one of the finest ways to combat the detrimental effects of stress, restoring the beauty, tranquility and harmony of Nature into the lives of everyone.
