

1: Atorvastatin - Price List of Brands / Trade Names | Medindia

Browse an A-Z list of Brand and Generic drugs to learn about your prescription medication.

Non-stimulants Non-stimulants affect the brain differently than stimulants do. In general, it takes longer to see results from these drugs than from stimulants. These drugs come in several classes. They may also prescribe them if a person wants to avoid the side effects of stimulants. Atomoxetine Strattera Atomoxetine Strattera lets norepinephrine work longer in the brain. The drug is long-acting, so you only need to take it once per day. This drug is also available as a generic. Atomoxetine has caused liver damage in a small number of people. If you have signs of liver problems while taking this drug, your doctor will check your liver function. Signs of liver problems include a tender or swollen abdomen , yellowing of your skin or the whites of your eyes , or fatigue. This drug is also used to treat high blood pressure. Because it also lowers blood pressure, people taking it for ADHD may feel lightheaded. This drug is available as a generic. Guanfacine Intuniv Guanfacine Intuniv is normally prescribed for high blood pressure in adults. This drug is available as a generic, but only the time release version and its generics are approved for use in children with ADHD. This drug may help with memory and behavioral problems. It may also help improve aggression and hyperactivity. For instance, an article in the journal Pediatrics says that changing your diet may alleviate your ADHD symptoms. Talk to your doctor about your drug options as well as the alternatives, such as these six natural remedies. However, the dosages of many of these drugs are different for kids than they are for adults. Also, the side effects of these drugs are different in adults than they are in children. Your medical history can limit your treatment options. Healthline Medical Team Answers represent the opinions of our medical experts.
