

## 1: Books For CBSE 12th Physics, Chemistry, Maths, Biology

*Modern's abc of Chemistry Class - 12 (Part 1 & 2) (With CD) is a comprehensive book for students of standard XII appearing for different entrance exams like AIEEE, IIT's and PMT.*

Biology A complexity to pick between the books from various publications makes you freeze. Furthermore, what happens when your companion lets you know that you have purchased a useless book any of Physics, Chemistry, Maths and Biology. This takes all your trust away from the book in which you have contributed a considerable amount of cash. Yet, those books advantages them, as they can offer them in higher expenses to the next 12thies. So, i have divided the students into four categories as far as books they purchase. So, which is the best among them? You are not quite the same as every other student, as you probably know that the research before purchasing a book is an essential step. Purchasing a book with good research will definitely give you an awesome support. Please Note No book is written worthless to read, each book is planned and arranged for best preparation perspective. So, nobody can judge which book is best. You should simply read it strict to the syllabus. What will you find in this article? In this article, I will propose you the best reference books for CBSE 12th Class of subjects Physics, Chemistry, Maths and Biology with some positive and negative points for every book. Also, you can follow the direct buy link to buy the books online. Picking a right book is the initial move towards awesome learning â€” neer I have separated the books for every subjects as per the time you are left with for the preparations, keep in mind to purchase last 3 and 1 month books to accomplish magnificent percentage. Toward the starting i have collected those books which you should purchase at the earliest time of the 12th class. Also, if you turn out the previous board papers of physics then you will see a lot of questions has directly appeared from NCERT book. Now one must look for the ncert solutions which is provided by NCERT solutions by Arihant, this book provides all the solutions to the questions present in NCERT book whether they are in-text or the exercise one. Physics 12th Why To Buy? It is not necessary to buy this book, but if you want to score good marks then do not let this book go. By this book you will be already covering a number of questions that have a good chance to come in the board exams. You must know that no question in board exam will fall out of the syllabus, so reading and learning NCERT questions and answers should be your first step and this is the best reason i can give you. You can carry this book wherever you want and this really helps while preparing for physics. Also, if you do not want to buy Arihant publications book then you can opt for other books containing the solutions of NCERT book. In this way you will be covering the chapters in the best way. You can prepare for competitive exams from this book as well. At the end of each chapter and unit there is a vast number of questions with their solutions which have appeared in previous board and some competitive exams, and this helps a lot while preparing for board or some competitive exam. You will find some highlighted and colored text within each topic, this makes it even more easier to retain important things. Why Not To Buy? The theory and explanation part is well written, but not described to the roots, so if you have less grip in understanding physics then you will find difficulties in understanding the topics as well, until you discuss the topics with your teachers. But, do not take this book in a negative way. This book is really helpful when you study it by the beginning of 12th class. First of all, do not buy this book when you are running out of time. Say if you have only 4 months then let this book go and opt for some other book. By following the suggestion below. Give at least 1 to 2 hours a day and complete this book in 4 to 5 months, so that you can get enough time to revise it and opt for other books too. Modern ABC If you are comparing modern ABC with pradeep then please stop doing that, both the books are far apart from each other, pradeep is more focused on board exams and less on the competitive point of view, and vice versa in Modern ABC. Most of the students prepare for competitive exams with their board exams, and Modern ABC is slightly more focused on competitive perspective, and hence this book is great go from competitive point of view. Modern ABC helps even after the 12th class, each topic, definition and derivations in this book are explained in a very efficient way, which really helps a lot. Book also contains important question and answers for both board and competitive exams. As I mentioned above that, this book is specially designed for the competitive exams preparations. So, if you are just focusing on getting good percentage in 12th class, then

the content in this book is more than enough and will take almost 2 years to complete. What I mean to say is that, this book has some extra topics which are absolutely out of syllabus and useless to study, when preparing for board exams. You cannot take this book everywhere with you, and this creates a bit of restrictions while you are preparing. Well ABC will take a lot of time to complete, so you have to spend more than 3 hours a day to complete this book on time. Also, do not buy this book when there is a shortage of time, say you have only 3 months left for the exams. Also, keep maintaining side by side notes from ABC and put the page number on your notes as well, this will help you to find the topics easily and save a lot of time. This book is well written and has all the important stuff related to the board exam of physics, moreover, according to the users' reviews on Amazon, this book is far better than S. See, I am not an anti S. L. Arora, maybe S. L. Arora will benefit you and suits you more than All in one physics, but just give this book a try during the last months of preparations and you will see the results in your favour. Simply, everything written in this book is important. And if you are not intelligent enough then go for this book. Xam Idea This is not so popular a book in terms of physics, and its selling rate is less as compared to other books. But like All in one physics this book is also very strictly according to NCERT syllabus, and there is no extra content out of the syllabus. So, as the name suggested Xam Idea, this book focuses on board exam and not on the competitive things. Book also contains a lot of questions from previous years and from NCERT book as well, which really helps a lot in boosting the preparations. The best thing about these last month books is that you can take them anywhere you want. Also, you do not have to prepare notes while studying from these sort of time books, as they are in themselves a big pile of notes. Last Month Books – Physics If you have reached to the last month of the preparations and have completed all the theories, derivations and notes, then it is the time to sum up all your hard work at one place. The last time books play a vital role in boosting the percentage. This book covers the model questions from each chapter and previous year questions as well, which can prove really very helpful to finish any chapter. Reading the theory, or practicing the derivations of physics is not really enough, because in board exam you will find the paper far different from your expectations, and this happens only in the case of physics. This book also contains fast track revision notes at the end, which will help in finishing each chapter efficiently. But, before buying this book let me clear you one thing that, you also practice the previous years' questions as well, so that there remains no page unturned at the end. Physics for Class 12th Best Books For CBSE 12th Chemistry Preparing for chemistry is far different as compared to that of physics, and this subject needs some different strategies and hence different books. Books which are best for physics does not necessarily mean that they are going to be best for all the subjects. So, do not ever buy all the books of same publisher, these are not my words but the words from the achievers in board exams. And not only chemistry, this must be your first target to read out the NCERT book along with all the questions present in each chapter. And for chemistry I found NCERT solutions by Arihant again as the best book to go with, the paper quality is not so in favour, but the content in this book is really worth studying. And according to me, you should go for this book from the beginning of the 12th class. Chemistry 12th Why to buy? Chemistry is much easier than physics, and you can get much more marks in chemistry as compared to the physics. And if you look over some previous board questions from chemistry, then you will find most of the questions have come directly from the NCERT book. Keep this book always beside NCERT textbook, and whenever you face any question or problem in NCERT book, then use the solved book to learn or practice the question, this will make you stronger for every chapter. So you do not have to read the whole para again while revising. So, which one are you going to buy? Now you must be thinking that Modern ABC will be a good choice but there are the same reviews for this book too. If you are damn serious about the competitive exams after 12th class, then you must go for these books as they can bring a great competitive exam stuff. These books have a lot of extra content which is useless to study while preparing for the board exams. So, think twice whether you are preparing for 12th only, or you are looking for competitive exams. If you have decided to buy these books, then let me tell you how you should deal with them. Your primary target should be to complete these books as soon as possible, and make it half of the year, if possible. Whether you are preparing for 12th board or some competitive exam, first thing comes first and that are your board exams. So try to wind up these books as soon as you can, so that you can give time to revision as well. Best Books For Chemistry – last 4 Months of Preparations If you are preparing for

chemistry from the starting of class 12th, then go for the books listed above, else, if you have less time and you are not prepared with chemistry yet, then you do not have to worry, as there is still a lot of time in which you can easily score more than 80 marks in chemistry. All In One Chemistry All in one chemistry is one of the best books for the last months preparations, all the topics and questions given in this book are strictly according to the CBSE guidance. Each and every topics are described in a very good manner. Over all, this book is best to buy for the last months preparation. As i said before, the board question paper of chemistry is always easy, as it seems hard while preparing for it. If you have bought this book at the beginning of 12th class, then everything will go smooth for you. But, if you are buying this book before 3 to 4 months of the board exams, then you have to invest more time while studying this book. Investing means 5 to 6 hours a day. Also, try to complete this book in 3 months, so that you can get more time to practice sample and previous years papers. You can trust this book, but let me tell you one thing clear, while preparing organic section from this book keep NCERT textbook beside, as the organic section of this book is not well explained, but the question and answer given at the end of each unit are very useful. So, for organic chemistry learn out the important structures, definitions, and reasoning given in each chapter, and then go for the question and answers from this book. Since, this book is lite and portable therefore, you can carry it anywhere. And below is the list of best books for sample and previous year papers. But, there is a difference, the 15 sample papers by arihant only offer sample papers, which means you will have to study the previous year papers separately.

### 2: Modern Publishers - MBD Group

*This Mod ABC Plus of Chemistry Class- Set of 2 Books helps the students of class 12 to have a clear knowledge of a scientific discipline involved with compounds composed of atoms, elements, and molecules, i.e. combinations of atoms: their composition, structure, properties, behaviour and the changes they undergo a reaction with other compounds.*
