

### 1: How to Make a Giant Monkey Fist DIY Projects Craft Ideas & How To€™s for Home Decor with Videos

*How to make a monkey fist jig Another tool that you can easily make at home is a paracord monkey fist jig. As you might have noticed from my tutorials on the various tools such as the one on the lacing needle and the tutorial on the knitting spool, I like to make my own tools.*

Check out my recommendations at the end of this post [Monkey Fist Instructions Step 1: How to Connect Paracord To](#) get started, we will need to connect both pieces of paracord at the ends so we have one single strand to make our monkey fist: Take the ends of both your major and minor paracord. In this case, we are using black paracord as our major color and grey paracord as our minor color. [Melting Ends of Paracord](#) Take both ends, melt them using your lighter and press them together. Take both ends, melt them using your lighter and press them together. [How to Make A Monkey Fist:](#) Grab your jig and line up your paracord so the merged part is lined up in the center on the inside of the two pegs closest to you. You will want your major color on the right and your minor color on the left. This counts as one loop. You will repeat this 9 more times until you have completed 11 loops. Wrap the grey strand out and around the four pegs in a counter-clockwise fashion. [Wrapping Monkey Fist Loops](#) Keeping those loops in tact, place the pool ball in the center and hold it in place with your hand. Place the pool ball in the center. Start to wrap the black cord up and over the grey loops. You will wrap it clockwise, making sure it goes on the outside of the grey minor color cord. As you wrap your paracord to make your monkey fist knot, do your best to keep each loop next to each other and not overlapping any other loops. This will make it easier for you when you start to tighten your monkey fist. Loop the black paracord counter-clockwise around the outside of the grey paracord. Keep wrapping like this, going around the pool ball in the center. Wrap until you have gone around 11 times. Complete the [Monkey Fist Loops](#) Now we are going to complete the last set of loops, continuing with the black strand. This time, we will weave the strand so it is on the inside of the grey loops but around the black loops we just made. Be sure to use this series of loops to contain the pool ball. Just like the previous steps, you will wrap it around 11 times. Grab the end of your black paracord. Thread it up and inside the grey loops. Thread it over the black loops then back down on the inside of the grey. These loops will be hugging the pool ball. Thread it back under the pool ball. Bring it behind the pool ball and inside the grey loops. Now you are going to remove it carefully from the jig and start tightening. As you go through and start tightening, it is important that you do not make anything too tight for the first round. If you tighten too much too early, you will end up causing the cords to overlap. Take your time at this phase, and try to maintain symmetry all around your knot. Starting with the grey paracord at the corner where you made your first loop, pull the complimentary side up gently to tighten the corner. Follow the strand around the fist, continuing to tighten. Start tightening the loops. Be patient, this is a slow process. Follow the cord around the ball and continue to pull and tighten. Continue all around the ball, it should start to look like this. Continue along the ball starting with the black cord. You will have to go around a couple of times to get the monkey fist nice and tight. To do this, you will first make a diamond knot with the two pieces of cord hanging out of the monkey fist. To start the diamond knot, align the two cords next to each other. Take the black strand and make a loop over itself. Bring the grey strand under the black loop, over the top of the black strand then back under the black strand. Now thread the grey strand over the bottom part of the black loop, underneath itself then back over the top part of the black loop. Pull the grey strand slightly to tighten the loops. Just slightly Pull the grey strand around and under pulling up through the center of the black loop. Make sure you end up on top of the other grey strand that is there. When you pull it a little tighter, this is what your knot should be looking like. Grab the end of it. Loop the black strand on the left side of the knot, over the grey strand and under all the other pieces, pull it up through the center of the knot just like you did with the grey strand. This is what it should look like. Now, carefully start tightening the knot. Pull the strands one by one to get the diamond knot closer to the base of the Monkey Fist. This is how your diamond knot should look. To do this, we will tie a seesaw knot. Grab your third piece of paracord 8ft piece and fold it in half to get started: Fold your third piece the 8ft piece of paracord in half to make a loop. Thread the loop around the grey cord. Now grab the black cord on the right. Thread it behind the grey loop and up through the

new piece. Pull all four strands to tighten. You will always start with the strand that is the highest up. So, the next strand that you will work with, is the black one on the top left. Now, grab the top left black strand from your new piece. Do the same as you did before and wrap it behind and up through the center of the right two pieces the grey and black strands. Bring it back to the left side. Now the grey strand is the highest strand, so this will be the next one you work with. Wrap the grey strand back behind. Then pull the grey strand through the middle of the left two strands. Pull the grey strand back to the right side, and pull all four strands to tighten. Continue to repeat those steps until you have reached your desired length. How to Make the Paracord Handle Make your lanyard as long as you want. Keep your black and grey strands that came out of your monkey fist as the center piece of your cobra weave. Pull your remaining black pieces of cord to opposite sides. Starting with the left piece, pull it under the center pieces and over the right strand. Take the right strand over the center pieces, then over and through the loop on the left side. Tighten the first knot. Now repeat with the right strand. Bring it under the center piece and over the left piece. Take the left strand over the centerpieces and down through the loop on the right side. This is what your cobra weave should be looking like. Finish the ends by cutting and burning. Make a knot with the black and grey center strands and cut and burn as well. Want more cool projects? Join our mailing list and be the first to know about our latest and greatest. To get started, we will need to connect both pieces of paracord at the ends so we have one single strand to make our monkey fist: Take the ends of both your major and minor paracord. In this case, we are using blue paracord as our major color and grey paracord as our minor color. Line up one end of each next to each other and use your scissors to cut the ends. For each strand, you will grab the end and pull out about an inch of the white inside strands. Then trim the white strands. This will help you in Step 2. Take both ends, melt them using your lighter and press them together. Take both ends, melt them using your lighter. Connect the ends by pressing them together while still hot. Grab your jig and line up your paracord so the merged part is lined up in the center on the inside of the two pegs closest to you. You will want your major color on the right and your minor color on the left. Start the weave with your minor color. This counts as one loop. You will repeat this 4 more times until you have completed 5 loops. Wrap the grey strand out and around the four pegs in a counter-clockwise fashion. Continue to loop the grey strand. Keeping those loops in tact, place the ball bearing in the center and hold it in place with your hand. Place the ball bearing in the middle. Repeat Step 4 with the blue strand your major color. You will wrap it clockwise, making sure it goes on the outside of the grey minor color strand. As you wrap your paracord to make your monkey fist knot, do your best to keep each loop next to each other and not overlapping any other loops. This will make it easier for you when you start to tighten your monkey fist. Continue to wrap the blue strand around. Now we are going to complete the last set of loops, continuing with the blue strand. This time, we will weave the strand so it is on the inside of the grey loops but around the blue loops we just made. Be sure to use this series of loops to contain the ball bearing. Just like the previous steps, you will wrap it around 5 times. Grab the end of your blue paracord. Pull it out to the front. Thread it up the inside the grey. Repeat and thread down the back side again. Continue the same process and pull it up through the front. Just like before, do this until you have 5 loops. You have now formed your monkey fist knot! Now you are going to remove it carefully from the jig and start tightening. As you go through and start tightening, it is important that you do not make anything too tight. If you tighten too much too early, you will end up causing the cords to over lap. Starting with the grey paracord at the corner where you made your first loop, pull the complimentary side up gently to tighten the corner. Follow the strand around the fist, continuing to tighten. Now move on to the blue strand. You will start at the same point as you did for the grey strand " where they are joined together. Repeating the same method as in Step 8, start tightening the blue strands, working your way around the five loops. Since the blue strand continues on to the thirds set of loops, continue to tighten the rest of the blue loops. Continue to repeat this process until you are happy with your end product. Follow the instructions below to complete your keychain: Take both your grey and blue strand and line them up next to each other. Make a loop about 3. If you want your keychain to be longer, then adjust where your loop begins accordingly. Make a loop with the other end of the cords so the end wraps back around toward your first loop. Grab the open end and begin to wrap it around the core of the loops. Start close to the top loop with your first wrap. Wrap as many times as you like. Pass the end through the bottom loop. Pulling on one side of the top loop will tighten the bottom loop around the end piece, completing your noose.

How to make a monkey fist jig Another tool that you can easily make at home is a paracord monkey fist jig. This allows me to replicate the tool, should it be damaged or lost. So, this time I made a monkey fist jig. For those that are not familiar with these jigs, they are designed to hold the inside of the monkey fist still, so you can make the monkey fist knot easily and consistently. Usually a marble, ball bearing, a pool ball or something spherical is used for inside the knot. It is an easy project that does not take up a lot of time about minutes after you have the supplies at the ready. I decided on the wooden jig, since I like the feel and smell of wood, plus it is comfortable to work with. Once you are done with the jig, see how to tie a paracord monkey fist. In the following tutorial you will see the steps I took to make a jig. Click on any of the images to enlarge them. Drilling the holes I started by marking out the holes where the drilling will take place. First I drew two lines that had a 90 degree angle between them. I then marked the radius of the ball that will fit inside the monkey fist on both of the lines and connected these. Finally I marked the drill holes and started the drilling. Preparing the jig I pre-drilled small holes to the back of the vertical piece of the jig. Then I inserted the wood screws and screwed them in. Dowels and finishing touches Finally I cut 4 pieces from a dowel rod, applied sand paper to make them smooth and also sand papered the holes drilled for the rods. Testing it out Finally the moment of truth was here. Was all the work worth it? Did the ball fit the jig? Victory for the good guys!
