NAS QUICK START GUIDE pdf

1: EMC Community Network - DECN: VMAX Documentation Index

Either use the QNAP IR remote control or a USB keyboard to directly operate the NAS. Start Installing If the NAS is connected to an HDMI display, the system will guide you through the installation process.

Unless these are set, the only way to access a shell as root is to gain physical access to the console menu or to access the web shell within the administrative GUI. The alert system automatically emails the root user account whenever an alert is issued. Click the Change E-mail button associated with the root user account and input the email address of the person to receive the administrative emails. If you click the console messages area, it will pop-up as a window, allowing you to scroll through the output and to copy its contents. Typically, the configuration workflow will use the following steps in their listed order. When creating a volume, you have several choices depending upon your storage requirements and whether or not data already exists on the disk s. The following options are available: Auto-importing is described in more detail here. This is described in more detail here. If you format your disk s with ZFS, additional options are available: Divide the ZFS pool into datasets to provide more flexibility when configuring user access to data. Dataset creation is described here. Zvol creation is described here. OpenLDAP and Active Directory are mutually exclusive, meaning that you can not use both but must choose one or the other. Manually create users and groups. User management is described here and group management is described here. Import existing Active Directory account information. Import existing LDAP account information. Configure Permissions Setting permissions is an important aspect of configuring access to storage data. The graphical administrative interface is meant to set the initial permissions in order to make a volume or dataset accessible as a share. Once a share is available, the client operating system should be used to fine-tune the permissions of the files and directories that are created by the client. Each volume and dataset will have its own Change Permissions option, allowing for greater flexibility when providing access to data. Before creating your shares, determine which users should have access to which data. Configure Sharing Once your volumes have been configured with permissions, you are ready to configure the type of share or service that you determine is suitable for your network. It is recommended that you select only one type of share per volume or dataset in order to prevent possible conflicts between different types of shares. The type of share you create depends upon the operating system s running in your network, your security requirements, and expectations for network transfer speeds. The following types of shares and services are available: This type of share is a good choice if all of your computers run Mac OS X. Configuration examples can be found here. It is a good choice if there are many different operating systems in your network. If your network contains only Windows systems, this is a good choice. Start Applicable Service s Once you have configured your share or service, you will need to start its associated service s in order to implement the configuration. By default, all services are off until you start them. To start a service, click its red OFF button. After a second or so, it will change to a blue ON, indicating that the service has been enabled. Watch the console messages as the service starts to determine if there are any error messages. Test Configuration from Client If the service successfully starts, try to make a connection to the service from a client system. Backup the Configuration Once you have tested your configuration, be sure to back it up. Your browser will provide an option to save a copy of the configuration database.

Thank you for your application! Back to Download To download the software products please make your choice below. An installer link and the license key will be sent to the e-mail address you specify. Please check the Free vs. To download the software products please make your choice below. StarWind Cloud VTL integrates a cost-efficient Amazon S3 and Glacier cloud storage tier into the backup infrastructure, eliminating costly tape backup processes and delivering ransomware protection. Learn more about the solution here. To download the software product, please, fill in the form below. An installer link and a license key, if applicable, will be sent to the e-mail address you specify. The Release Notes can be found here. StarWind VTL is a backup storage solution designed to eliminate costly tape backup processes while meeting regulatory data archival and retention requirements using on-premises Virtual Tape Libraries with cloud and object storage tier. To download the software product please fill out the form below. An installer link will be sent to the e-mail address you specify. The installer link will be sent to the e-mail address you specify. StarWind Deduplication Analyzer is a free portable tool for the quick assessment of data deduplication ratios. It estimates the results of deduplication without the need for moving data to dedupe-enabled storage or evaluation kits. More details about the product can be found here. To download the software product, please, fill in the form. You always can learn more about the solution here. StarWind Tape Redirector turns a bulky tape infrastructure into a flexible virtualization-aware backup system. Learn more about StarWind Tape Redirector here. The installer link and a license key will be sent to the e-mail address you specify. This free solution fits perfectly for testing and troubleshooting purposes. Learn more details about RAM Disk here. The installer link will be sent to the e-mail address you specify below. StarWind Manager is a product for orchestrating IT environment from a single pane of glass. This approach simplifies management and daily routines of system administrators. More details about the solution can be found here. The solution enables to emulate a local storage bus over the networks. This free software replaces dozens of tools needed to measure bandwidth and latency for the cross-platform RDMA connections. Learn more about StarWind rPerf here. To download the software, please fill in the form below. The installer link will be sent to the email address you specify.

NAS QUICK START GUIDE pdf

4: Seagate NAS OS 4 User Manual - NAS OS Setup

This tutorial will show you how to setup your Seagate Windows Server NAS for the first time and how to connect to the unit remotely from a computer on the same network.

Data stored on the hard drives will be deleted. Make certain to back up data on the hard drives before installing them in the Seagate NAS enclosure. Make certain to boot the NAS before inserting new hard drives. Since the boot order for the NAS starts with the hard drives, you can encounter a problem if it detects an earlier version of NAS OS or another operating system. Insert the hard drives once the diskless enclosure is powered on and the status LED is blinking. The NAS checks for software updates during the installation. An error message informs you if it cannot check for updates due to a missing connection to the Internet. You have the option to search for updates after the installation. The instructions for hardware installation are available on the quick start guide and user manual for your Seagate NAS. Make certain to follow the instructions before continuing with the steps below. Power on your Seagate NAS device. The device is ready to be accessed once the status LED turns solid. During the installation, you can: Create or change the name of the device. Create or change the administrator login the default is admin. Create a Seagate Access account for remote access. Configure or change the RAID level. Adjust the time zone. Make certain to note your login and password for future use. Upon completion, you are prompted to restart the NAS. Note on USB keys: Upon reboot, the status LED turns on and begins to blink. Next steps Simplify NAS access: Seagate recommends that you install the software utility Seagate Network Assistant before moving forward with the device configuration. See Seagate Network Assistant for instructions. Access and Transfer Files and Device Manager. Install Sdrive for local and remote access: For more information, see Remote Access. For further information, go to: Download the Seagate Network Assistant installer for your operating system:
