Here is an easy-to-follow set of plans for building a sturdy, practical and simple bench for reloading rifle, handgun or shotgun ammunition. The bench is designed to be extremely sturdy to withstand the pressures of any reloading press or tool. It has plenty of room to mount presses and other equipment, plus storage areas for accessories and components, with a special drop-down shelf for your powder scale. While many reloading benches have been designed and built by reloaders everywhere, this bench has been designed to be as versatile as possible to meet the needs of most reloaders. However, this plan also can be called a starting place for the imaginative builder who wants to customize his bench to meet his own specific needs. For instance, it can be made larger or smaller to meet space requirements or quantities of equipment and components. This can be adjusted simply by making the legs longer or shorter. These plans include drawings and photos of construction details, a materials list and a guide to cutting pieces from ordinarily available plywood. If your home workshop does not include a table saw, you might wish to have a cabinet shop accurately cut the components for you. A precise fit not only will make your bench better looking, but will also make using it more enjoyable. The entire bench is assembled with bolts and screws for strength. After the construction is completed, you may wish to paint or stain your bench to fit into the area where it will be used. In use, this bench permits you to separate the three major reloading processes and keep the necessary accessories and components separated and ready for use. The left hand compartments are for the processes involving resizing, removing spent primers and priming the hull or shell. The middle compartments contain the powder scale, powder measuring devices, and the powder canisters themselves. The right hand compartments are for bullets, shot, wads and other final components for the completed shells, as well as accessories. There also is a generous lower shelf for storing larger quantities of components. Before you start, study the list of materials and the drawing in Figure 1 to identify all components and their locations on the bench. The bench and cabinet sections should be built separately, then joined after completion. This is a very large bench which may not go through doorways when assembled, so plan ahead. As with any project, it is best to assemble all components, hardware, and tools before you start.

It is small, with minimal storage capacity and a pretty limited work area, but it is quick and easy to make, and is collapsible for easy storage. If you have a limited selection of tools, or live in a small space such as an apartment, this may be a good bench to try out. It is a slightly more advanced project and includes a foldout shelf and quite a few cabinet doors. This is definitely doable for the average Joe though, as the plans listed in the PDF are very thorough and easy to read. You can expect to spend a bit more money on hardware and lumber to make this bench look nice, but the end result will be a time-tested design that will last for years to come. This foldable bench will go much flatter than the previous one listed, but in order to do so, you sacrifice the raised shelf space. But by doing that, it also makes the project much easier and cheaper to make. In fact, this design can be built with just a few bolts and a single piece of plywood! This is going to be slightly more difficult than the basic benches that use pre-fabricated parts, but it is going to be far easier than the more complicated benches that include drawers and cabinets. This is a basic 2 level bench with a few upper-level shelves and a pegboard backing that can be used to hang a few tools and supplies. If you are looking for something that is going to be high-quality, yet still easy to make, then this would be a good bench to check out. There are no cabinets or raised extra shelves, so this would be a great option if you have any sort of height restriction on your bench. If you are looking for a cheap, easy bench project that would be great for a beginner, then this is a good plan to check out. This bench utilizes many of the same construction methods, but is built entirely from 2x4s. This means that you will have to do a bit of extra work on the bench top, since you are not covering it up with plywood. If you have intermediate level carpentry skills and would like to save a bit of money on your workbench, this is an excellent one to try. This is a fairly cheap bench, and can easily be built in just an afternoon. A reloading bench with drawers is much more secure than cabinets or plain shelves, but it is often times harder to store tools and keep them organized in drawers. However, if you have children, frequent visitors, or just want to keep your supplies kept secure and hidden, then this would be a great bench for you. This is a bench that is not only cheap, but can be constructed relatively easily in only an afternoon. This is a great bench that is loaded with features, but in order to do all of that, it does sacrifice some stability. While it will still be adequate for a basic budget reloading bench, it may leave you wanting a bit more down the road. This bench is quite a bit more complicated than your average basic bench and incorporates the use of caster wheels and hinges. Keep in mind that the hinged fold-out sections are sturdy enough to work, but will not be nearly as stable as a bench that is built in place and not foldable. That being said, this bench is an excellent compromise between portability and stability, and would certainly serve the space-conscious reloader well. This bench would make a great reloading setup in a garage where space is a concern. One thing to keep in mind is that this project uses a few more tools than the average bench. With most benches, you can get away with just a power drill you may not even need a circular saw if your local hardware store offers cut-to-length services. This project, however, requires the use of a jigsaw and other less common hand tools. If you feel up to the challenge and really need the extra space, this may be the bench for you. This bench can be hinged, rolled, folded, and slid into almost any shape you would like, as both the quantity and purpose of each of the bays is totally up to you. With this bench, you can set everything up to have a full gunsmithing shop in your basement, and then store everything neatly against the wall when you are done. This is a slightly more complicated project and will cost a bit more money, but the space savings and customizability make it worth it. If you are looking for a lot of workspace that stores away easily, this may be a good bench to build. This bench has a triangle frame and mounts to the wall, so it takes up almost no floor space at all, while still giving you plenty of workspace to reload. One of the best parts of this bench is that the smaller lower shelves give you plenty of room for your legs underneath the bench. This is perfect for the reloader who likes to sit while they work, as it allows you to sit much closer to the bench top. If you are hard pressed for floor space, or just love to sit while you reload, then you may want to consider this bench. The bench pictured includes built-in

table saw and air compressor, but these can easily be swapped out for other tools more suited to reloading. It also includes ample divided storage space underneath to store all of your reloading tools and components. Part of the reason that this bench is so complicated is that the instructions are not very clear, and it uses a lot of reclaimed parts that are not necessarily common at your local hardware store. If you are a good carpenter and are willing to do a bit of extra legwork yourself, then this may be a good design for you to follow. It is simple, yet sturdy and retains the old-time aesthetic of a traditional workshop. This can be much more than just a reloading bench, it can be a part of your decor. This bench is as functional as it is beautiful, and when built correctly can be a bench that you are not only proud to reload on, but proud to display in your house as well. This bench does lack any sort of storage space, but if aesthetic and design are important to you, then this may just be the perfect bench. The caster wheels allow this to be rolled virtually anywhere you need it, and the ample shelving underneath gives you plenty of room to store all of your tools and components. There is nothing fancy about this bench ; no fold out shelves or fancy drawers, which make it much easier to construct. If you are looking for a simple, easy to construct rolling bench with plenty of storage, this may be a good bench for you. This bench folds almost completely flat for easy storage, yet expands out to a full-size bench. This can make things a bit complicated when it comes to mounting all of your reloading tools, and would most likely require you to dismount all your press and powder measure before storage. However, if you live in an apartment or otherwise have no space, this would be a great option that would still allow you to be able to reload. It is both affordable and easy to make with a simple design that is both functional and elegant. Once painted, this bench will hardly be the eyesore that other benches are, which would make it an excellent candidate for a reloader with a better half to please. The bottom shelf does give a fair bit of storage, but it lacks any cabinets or drawers, which may cause problems if you have a lot of supplies and equipment. Overall, this is a stylish bench that would look good in almost any home, while still being sturdy and very functional. This bench involves no trips to the hardware store for lumber, as the instructions walk you through cutting your own timber from a plain tree. This bench is beefy, unique, incredibly sturdy, and just plain cool. This is not just a bench, but a conversation piece. Sure, anybody can go to the hardware store and build a bench out of 2x4s, but how many people can turn a plain tree trunk into their next reloading bench? This is one of the most simple benches to make, as it consists of only a hard wooden top mounted on top of your tool chest! This is a rather ingenious, incredibly simple design that uses something that you already have on hand to make your life much easier. Plus, the drawers in the tool chest will give you ample storage space for all of your reloading supplies. If you are wanting a simple, functional workbench that will get the job done and still look good, then you may want to look at this one. This sturdy bench utilizes the existing bare studs used to frame out your room, which makes it very sturdy. It also uses metal angled braces instead of front legs, which makes it much easier to sit at. You will need to keep in mind that this bench will be built into the framing of your room, and it will not be portable or able to be easily moved at a later date. It will also make finishing the room much harder. The caster wheels allow this bench to be rolled anywhere, and the flip out worktop is actually height adjustable! This is an excellent feature for the reloader who would like to both sit and stand at separate times during the reloading process. If you are looking for something that is compact and space-efficient while still providing plenty of storage and features, then this may be the bench for you. One of the best features of this reloading bench is that the top can be removed and flipped upside down! This is an excellent feature, as you can have all of your reloading equipment mounted to the bench when you want it, but if you just want a plain workspace all you have to do is flip the top back upside down! If you are looking for an interesting and functional reloading bench, then this just might be the ticket! This bench features an attractive wooden top that is easy to mound your equipment to, and plenty of drawers underneath to give you ample storage for all of your supplies and equipment. If you are an experienced carpenter and looking for a great, high-quality reloading bench, this may be the bench for you. This is a unique design , as the worktop splits in half instead of folding down. This allows you to leave your tools mounted much easier. Since this reloading bench mounts to the wall, there are no legs to worry about, and the footprint on your flooring is minimal. One downside to this bench is that it requires being mounted to the wall. This can be a problem for apartment-dwellers unless you are really good at hiding your mounting holes pro-tip: More Related Buyers Guides:
