The chassis is all black, with red accents on the hinge, keyboard, and touchpad. I do like the angular red hinge design, which looks nice with the lid either opened or closed. The laptop is made entirely of plastic, which is to be expected for the price. The lid bears a brushed finish, while the keyboard deck is a shiny, plainer material. Overall, I like the simple design, which includes just enough flourishes to keep it from being boring, even if it is yet another red-and-black gaming laptop. Those colors are the apparent uniform for gaming machines these days. Though plastic, the build feels sturdy in most spots, apart from some flex to the right of the touchpad and at the bottom of the display. Without pressing down on either spot intentionally, you likely would never notice; these are not areas that get stressed in normal use. Most heavier alternatives are inchers, and anything significantly lighter is surely a pricey form-focused gaming laptop, putting the Nitro 5 squarely in the middle of the pack with other inch options. To make the contrast clear, the premium Razer Blade â€"the new poster child for gaming portability in a inch-class machineâ€"comes in at 0. On the other end of the spectrum is the powerful inch Alienware 17 R5 , tipping the scales at 1. This is to say: The Nitro 5 is slim for what it is and light enough to toss in a bag, but nothing to write home about in terms of portability. View All 8 Photos in Gallery Its Despite this being an inexpensive machine, I have no complaints about the display. The resolution is the right pick for the components, the picture looks good, and the screen has wide viewing angles. Any higher resolution would be a wasted bump in price with the Nvidia GeForce GTX graphics card being used here, as it would strain its capability beyond playable frame rates. For example, the Inspiron 15 had a subpar panel, which was the main issue on that system. Dell later introduced a slightly more expensive IPS version. One area where the build quality did let me down is the touchpad. Also, when panning with your finger, sometimes the pad interprets that action as clicking and dragging, or the cursor skips ever so slightly. The pad tracks fine most of the time, but this is not something that should be even a little hit-or-miss. The keyboard fares better. The keys are appropriately responsive, with a good amount of travel. You also get a number pad to the right of the main layout, despite the inch-class chassis. Considering the Nitro 5 is a budget laptop, you get plenty of useful ports. Budget Pricing, Budget Power Even as a price-conscious build, with a Core i5 instead of an i7, the Nitro 5 performed admirably on our benchmark tests. But the Nitro 5 benefits regardless, even if it is not unique. Its PCMark 8 score is solid, showing it can work through daily tasks like web browsing and word processing without much strain. In very value-first fashion, the Nitro 5 offers modest capability for gaming, averaging 32 frames per second fps and 41fps on the Heaven and Valley tests set to ultra-quality and p resolution. Those scores did go beyond the 30fps floor for smooth gameplay, though the most demanding games will see you dip below that number at times, which can be jarring. You may need to tweak detail settings down a notch or two to keep things smooth. Battery life was nothing to write home about, clocking in at 6 hours and 22 minutes in our video-playback battery-rundown test. The Inspiron 15 lasted much longer at The design is budget-gamer standard, with no surprises in any particular facet. Acer Nitro 5
