Nominations[edit] Nomination forms are sent by the Nobel Committee to about 3, individuals, usually in September the year before the prizes are awarded. These individuals are generally prominent academics working in a relevant area. Regarding the Peace Prize, inquiries are also sent to governments, former Peace Prize laureates, and current or former members of the Norwegian Nobel Committee. The deadline for the return of the nomination forms is 31 January of the year of the award. All nomination records for a prize are sealed for 50 years from the awarding of the prize. This, along with the list of preliminary candidates, is submitted to the prize-awarding institutions. Their decision, which cannot be appealed, is announced immediately after the vote. Except for the Peace Prize, which can be awarded to institutions, the awards can only be given to individuals. This has occurred twice: Since , laureates must be thought alive at the time of the October announcement. There has been one laureate, William Vickrey , who in died after the prize in Economics was announced but before it could be presented. Steinman , had died three days earlier. Early on, the awards usually recognised recent discoveries. For example, Johannes Fibiger was awarded the Prize in Physiology or Medicine for his purported discovery of a parasite that caused cancer. The Literature Prize is typically awarded to recognise a cumulative lifetime body of work rather than a single achievement. For example, laureate Martti Ahtisaari was awarded for his work to resolve international conflicts. Sometimes, this takes decades â€” for example, Subrahmanyan Chandrasekhar shared the Physics Prize for his s work on stellar structure and evolution. Some discoveries can never be considered for a prize if their impact is realised after the discoverers have died. The award ceremonies and the associated banquets are typically major international events. It is said that he changed his mind once his attention had been drawn to the publicity value of the prizes for Sweden. Apart from the laureate, guests include the President of the Storting , the Swedish prime minister, and, since , the King and Queen of Norway. In total, about guests attend. Nobel lecture[edit] According to the statutes of the Nobel Foundation, each laureate is required to give a public lecture on a subject related to the topic of their prize. The laureate is only obliged to give the lecture within six months of receiving the prize. Some have happened even later. In , the Mint of Norway, located in Kongsberg, made the medals. The Nobel Prize medals are registered trademarks of the Nobel Foundation. The medals for physics, chemistry, physiology or medicine, and literature have identical obverses, showing the image of Alfred Nobel and the years of his birth and death. The reverse sides of the medals for chemistry and physics share the same design. All medals made before were struck in 23 carat gold. Since then, they have been struck in 18 carat green gold plated with 24 carat gold. The weight of each medal varies with the value of gold, but averages about grams 0. The diameter is 66 millimetres 2. When Germany invaded Denmark, Hungarian chemist and Nobel laureate himself George de Hevesy dissolved them in aqua regia nitro-hydrochloric acid , to prevent confiscation by Nazi Germany and to prevent legal problems for the holders. After the war, the gold was recovered from solution, and the medals re-cast. Each diploma is uniquely designed by the prize-awarding institutions for the laureates that receive them. None of the Nobel Peace Prize laureates has ever had a citation on their diplomas. The purse has increased since the s, when the prize money was , SEK per prize c. If there are three, the awarding committee has the option of dividing the grant equally, or awarding one-half to one recipient and one-quarter to each of the others. Among other criticisms, the Nobel Committees have been accused of having a political agenda, and of omitting more deserving candidates. They have also been accused of Eurocentrism , especially for the Literature Prize. This led to the resignation of two Norwegian Nobel Committee members. However, when the award was announced, both sides were still engaging in hostilities. Ahnlund resigned, alleging that the selection of Jelinek had caused "irreparable damage to all progressive forces, it has also confused the general view of literature as an art". According to The Washington Post , many US literary critics and professors were ignorant of her work. The previous year, Dr. Walter Freeman had developed a version of the procedure which was faster and easier to carry out. Gandhi could do without the

Nobel Peace prize. Whether Nobel committee can do without Gandhi is the question". He consulted staff and later replied that he would. At the same time, Chairman Gunnar Jahn.

The Memorial Prize in Economic Science will come on Monday, Oct. 10, in Sweden. The Nobel Prize in Literature will be announced on Thursday, Oct. 13, in Sweden. Read about the winners at nytimes.

Share The Sveriges Riksbank Prize in Economic Sciences in Memory of Alfred Nobel has been awarded 44 times to 71 Laureates who have researched and tested dozens of ground-breaking ideas. She received it "for her analysis of economic governance, especially the commons. He said that each individual user will try to obtain maximum personal benefit from the resource to the detriment of later users. Ostrom showed that common pool resources can be effectively managed collectively, without government or private control, as long as those using the resource are physically close to it and have a relationship with each other. Local Lessons, Global Challenges. Behavioral Economics The prize went to psychologist Daniel Kahneman , "for having integrated insights from psychological research into economic science, especially concerning human judgment and decision-making under uncertainty. This concept is crucial to the field of study known as behavioral finance. Kahneman conducted his research with Amos Tversky, but Tversky was not eligible to receive the prize because he died in and the prize is not awarded posthumously. Kahneman and Tversky identified common cognitive biases that cause people to use faulty reasoning to make irrational decisions. These biases include the anchoring effect, the planning fallacy and the illusion of control. Their article, "Prospect Theory: An Analysis of Decision Under Risk," is one of the most frequently cited in economics journals. Their award-winning prospect theory shows how people really make decisions in uncertain situations. We tend to use irrational guidelines such as perceived fairness and loss aversion, which are based on emotions, attitudes and memories, not logic. For example, Kahneman and Tversky observed that we will expend more effort to save a few dollars on a small purchase than to save the same amount on a large purchase. Kahneman and Tversky also showed that people tend to use general rules, such as representativeness, to make judgments that contradict the laws of probability. For example, when given a description of a woman who is concerned about discrimination and asked if she is more likely to be a bank teller or a bank teller who is a feminist activist, people tend to assume she is the latter even though probability laws tell us she is much more likely to be the former. Asymmetric Information In , George A. Michael Spence and Joseph E. Stiglitz won the prize "for their analyses of markets with asymmetric information. Akerlof showed how information asymmetries in the used car market, where sellers know more than buyers about the quality of their vehicles, can create a market with numerous lemons a concept known as " adverse selection ". Quality Uncertainty and the Market Mechanism. For example, he showed how job applicants can use educational attainment as a signal to prospective employers about their likely productivity and how corporations can signal their profitability to investors by issuing dividends. Stiglitz showed how insurance companies can learn which customers present a greater risk of incurring high expenses a process he called "screening" by offering different combinations of deductibles and premiums. Today, these concepts are so widespread that we take them for granted, but when they were first developed, they were groundbreaking. Game Theory The academy awarded the prize to John C. Each participant bases his or her decisions on how he or she expects other participants to behave, without knowing how they will actually behave. The Nash Equilibrium expanded upon earlier research on two-player, zero-sum games. Their contributions are widely used in economics, such as in the analysis of oligopoly and the theory of industrial organization , and have inspired new fields of research. Public Choice Theory James M. He described his theory as "politics without romance. We can then design fixed rules that are more likely to lead to desirable outcomes. For example, instead of allowing deficit spending , which political leaders are motivated to engage in because each program the government funds earns politicians support from a group of voters, we can impose a constitutional restraint on government spending, which benefits the general public by limiting the tax burden. Buchanan lays out his award-winning theory in a book he coauthored with Gordon Tullock in , "The Calculus of Consent: Logical Foundations of Constitutional Democracy. Black-Scholes Theorem Robert Merton and Myron Scholes won the Nobel Prize in economics for the Black-Scholes theorem , a key concept in modern financial theory that is

commonly used for valuing European options and employee stock options. Fisher Black also contributed to the theorem, but could not receive the prize because he passed away in 1996. The Bottom Line Each of the dozens of winners of the Nobel memorial prize in economics has made outstanding contributions to the field, and the other award-winning theories are worth getting to know, too. A working knowledge of the theories described here, however, will help you to establish yourself as someone who is in touch with the economic concepts that are essential to our lives today. 3: Nobel Peace prize winners - the full list | World news | www.enganchecubano.com

The Nobel Prize in Physics was awarded with one half to Arthur Ashkin "for the optical tweezers and their application to biological systems" and the other half jointly to G rard Mourou and Donna Strickland "for their method of generating high-intensity, ultra-short optical pulses".

Marie Curie, a Polish-born and naturalized-French physicist and chemist was the first multiple recipient of the Noble Prize The Nobel Prize is the most distinguished and coveted global honour. First awarded in , it has recognized individuals and groups from over 30 countries or territories. In the years of its existence, the Nobel Prize has been awarded to close to 1, laureates. The Nobel Laureates can be groups or individuals. There have even been multiple time nominees and awards. The highest number of recognitions has been given to the International Committee of the Red Cross. It has received the Peace prize three times in history. The Nobel Prize recognizes significant contributions to the advancement of various aspects of culture, science and academics. In , a further category of Economics was introduced after the Central Bank of Sweden made a donation to the Nobel Foundation. The first multiple recipient of the Nobel Prize was Marie Curie, a Polish-born and naturalized-French physicist and chemist famous for her work on radiation. In , Marie Curie, alongside her husband and another physicist were awarded the Nobel Prize in Physics. This was in recognition of their achievements in studying the radioactive behavior of elements and successfully isolating isotopes. She repeated the feat in by winning the prize in Chemistry after isolating pure radium. The Curie family in total has had five Nobel Laurates. The majority of these prizes have been in the Nobel Prize for Physics. It is commonly thought that the access to improving technology has led to this accomplishment in the US. France has the highest number of recipients for the Nobel Prize for Literature, with 16 Laureates. It also has a reputation of throwing surprises in the annual event. In the early years up to the Second World War, the Nobel Peace Prize was always awarded to diplomatic mediators and anti-war activists. However, as the 20th Century progressed, the type of nominee and Laureates diversified to works done in other humanitarian ventures. He believes that economically empowering rural women will help to eliminate the poverty experienced in his country. He jointly received the Peace award with Frederik de Klerk for their efforts in ending apartheid in South Africa. The anti-apartheid efforts in South Africa had earlier seen Reverend Desmond Tutu being awarded the same recognition in
