

1: 10 best note taking apps for Android

Best note taking app for taking and searching for notes of all kinds Evernote was an early leader in the digital note taking space. In many ways, it shaped expectations about what a note taking app should do and how it should look.

Round two takes a closer look. You can create individual notebooks for your personal diary, classes, projects, book ideas or anything else. Each notebook can, however, hold as many notes as you need. For those occasions, Evernote has two solutions: You can either search specific notebooks or your entire Evernote account. Tags may be even more useful. A tag lets you sort related notes using custom identifiers. You can clip a full page, just the article text or a simplified version of the article. You can also take a screenshot or just bookmark the page with a link. However you decide to clip it, Evernote will let you pick which notebook you want to store the clipping in, plus add tags and remarks at the same time. Evernote also lets you save important emails by forwarding them to a unique Evernote email address that every user receives. If you prefer to automate that function, both Zapier and IFTTT work with Evernote, letting you do things like send emails from certain individuals to a specific Evernote notebook. Many other recipes for both automation tools are available, too, like for syncing notes to Google Drive, tracking Facebook likes or creating a note when an iOS calendar is updated. Finally, you can attach files to notes, both uploaded locally and from Google Drive. OneNote OneNote shares many of the same features as Evernote for organizing work, with notebooks for gathering related notes being the most important. Evernote actually takes things a step further: You can search for notes containing specific keywords by clicking the magnifying glass icon near the top-left corner of the OneNote software. You can restrict the search to a specific notebook section or notebook, or search all notebooks. OneNote also has pre-defined tags for sorting related notes. However, these are limited to the point of being almost useless for serious note takers, having just six rather vague options available e. While OneNote lets you create custom tags, the version of the app available in the Microsoft store does not, and Microsoft has decided to sunset OneNote Like Evernote, you can also convert emails to notes by setting up an address for OneNote and a default notebook. Going forward, you can forward emails to that address for preservation. Automatically piping important emails from Gmail to a notebook, saving iPhone screenshots and saving liked Tweets are just a few examples of what you can do. Round Two Thoughts Evernote and OneNote are the two best tools out there when it comes to organizing cloud-based notes. Two key advantages of OneNote over Evernote are that you can create unlimited notebooks and you can subdivide notebooks into sections. Also, it has a slightly better web clipper. However, we think the use of custom tags is more useful than notebook sections, and most people will probably be fine with the notebook limit.

2: 8 Best Note-Taking Apps For Android Smartphones In

ColorNote, a minimalist, completely free note-taking app from South Korean startup Social & Mobile, has been downloaded more than 90 million times since launching in November It boasts

The description of this app mentions multiple ways to save a notebook. NONE of the saving methods such as save to pdf, files, or photos are available on the free version. Also, the scrolling is There is nothing whatsoever to recommend this product. It does a lot of the same things, with better scrolling. Free version of the app allows access to all available sharing features, however limits the number of notes that can be created and includes advertisements. You might consider checking our portfolio for the applications with no ads that are available for download on different terms. Thank you for your cooperation! Also needs to allow the font to get WAYYY bigger than 54 or whatever it is. I want to be able to have title and section title pages with nice typed words that are big. It would be nice to be able to put photos on top of photos so I can kind of scrapbook. It would also be nice to be able to include videos on notes. And also to be able to choose a different template for a page in the same notebook. We appreciate your comment and will consider it while working on future versions of the app. If you have any further suggestions or ideas - please let us know at support apalon. Thank you in advance! I was basically forced to download that stupid game before I could even get close to back to the app. That is where the issue is. I have no desire to have a game I hate. Thank you in advance for your cooperation!

3: Ultimate Note Taking Pack on the App Store

Taking notes the traditional way with pen and paper works just fine for some, but if you have a smartphone or tablet, using an app specifically designed for note taking can truly change the way you get things done.

Twitter Sometimes, we tend to forget even the silliest little things. But paper notes have their limitations. You may lose your notepad, and its no match for apps that can even store image notes or audio notes. Note-taking apps have flooded the Play Store recently. Here, we have made a compilation of Android note-taking apps based on the features they provide. All of these apps are free to download and will surely help you to increase productivity in day to day life. ColorNote ColorNote is a full-featured Android note taking app. It is not necessary to log in to the app, but you must do so if you wish to sync your notes and use online backup. The first time you open the app, it takes you through a nice tutorial which you can choose to skip but is indeed helpful. You can configure the app in three themes including a dark theme. Once you finish writing a note or checklist, it will save automatically when you press the back button. You can set a specific time or day for note reminders. Moreover, you can pin a note or checklist to the status bar in case you are the forgetful kind. Apart from all these features, you can change the color of your notes, set memo widgets, organize notes by calendar view, lock notes by password, share notes and a lot more. The app is free to download and ad-free. Evernote Evernote requires you to register using your email or Google account. You can set up to use fingerprint lock to protect your notes. It allows you to take notes in a variety of formats such as text, attachments, handwriting, photos, audio, and more. The app is cross-platform, so your notes get synced across all your devices. It is easy to set reminders, make checklist or plan events. The free version of the app will let you use it in two devices and any browser. Moreover, the free version allows up to 60Mb of uploads per month and file sizes up to more 25Mb. It stands apart from the other notes app by its unique interface and useful features. Apart from taking simple notes, it can do much more. ClevNote can help you organize bank account information and easily save them. You can later share your account number by easily copying it to the clipboard. Making grocery list or any to-do list is easy and convenient. The app can help you remember birthdays with additional memo and notification. ClevNote stores the information you have on your device memory with AES encryption. You can also opt for cloud backup using Google Drive. The app can be locked with a passcode. Moreover, there is widget support. ClevNote is lightweight and one of the best notes app for Android. It has ads and offers in-app purchases. The simplicity of the app is best of all. Notes can be categorized by labels such as work, personal or any label you like. You can set reminders based on time or place provided your GPS is on. Reminders will pop-up as a notification in all devices you are signed in using your Google account. So, there is less chance that you will miss it. The instant you write your note, it gets synced with your Google account, so there is no fear of losing it. You can easily search for any note and also organize them by giving a color code to each note. Google Keep can be accessed from any browser and also has a Chrome plug-in. It has been my daily note-taking app since its launch in It is free, does not display any ads, and can keep you organized in your daily life. DNotes DNotes is an elegant Android note-taking app with a material design interface. The app does not require any online account to start. It is simple and resembles Google Keep in many aspects. You can easily make notes and checklists. Also, you can add categories to organize your notes. Moreover, you can choose multiple themes, set colors to your notes, and backup your notes to Google Drive or SD card. This Evernote alternative supports widgets with customizable transparency. Overall, DNote is a highly customizable and user-friendly Android notes app that is free to download and does not display any ads. My Notes This app can be used as a notepad, journal or diary. Your records can be protected using password, PIN or fingerprint. It is easy to search for notes within the app and notes can be sorted by date, title or folder. You can add a reminder for each of your notes. Notes can be synced using Google Drive. Moreover, My Notes can automatically detect phone number, email address and web links to help you navigate with a single tap. You can set home-screen widgets for easy access. The app displays ads and offers in-app purchases. Scarlet Notes Scarlet Notes is a beautifully designed and feature-packed app to take notes with ease. You can sign in with Google to enable cloud sync. An option to add a tag to your notes

can help you find them easily. You can set different colors to your notes, and there is also dark theme available. Users can lock notes using a pin code. Additionally, you can search for notes, view archived notes, mark notes as favorite, and much more. Scarlet Notes has widget support. Best of all, this Evernote alternative supports Markdown Formatting. The app is open sourced and ad-free. You will need a free Microsoft account to use this app. It asks for your email ID, phone number or Skype name to log in. You can make notes by text, handwriting, drawing or clip contents from web. Also, you can use tags to label notes or to-do lists, and everything is neatly organized within the app. OneNote syncs your notes across all your devices and has cross-platform support. Moreover, it lets many people work on content together simultaneously. The app is a part of the Office family of software and works great with Office apps such as Excel or Word. Hence, the OneNote is very convenient for teamwork and brainstorming ideas. Did you find this list of best note-taking apps for Android to be helpful? 4: Best note-taking apps for Android in | TechRadar

Google released its note-taking app in , and critics gave it mixed reviews for not having adjustable formatting and being inconvenient for storing long-form notes.

You have your smartphone on you at practically all times. That makes it a prime spot to put your moments of inspiration. Or a good place to put that you need to get milk at the store. Here are some more excellent productivity apps! It allows you to create text notes, lists, and more. Its namesake feature is the ability to change the background color of notes to help you stay organized. Some other features include calendar support, backup support to both internal storage and cloud storage, and more. ColorNote also has to-do list features as well. It comes jam packed with features. Some of them include various note types, notebook support, organizational features, collaboration features, note sharing, and cross-platform support. During , it neutered its free offering. There are also two optional subscriptions that add a variety of features as well as cloud space to store your notes. However, people looking for free offerings probably have better options. It features a simple interface, Material Design, and a tag system for easier organization. The app tries to focus a bit more on security. Note encryption is optional and it uses AES encryption. Additionally, pro users can set up their fingerprint to encrypt and decrypt notes as needed. The free version comes with most of the features. The paid version removes ads, adds a dark theme, and also adds more encryption features. FiiNote is a fun little note taking application that provides a more authentic experience. That means you can type notes, write them, or draw them if you want. You can also add images, video, and voice messages to your notes. That makes it perfect for keeping all kinds of notes, doodles, sketches, and other types of notes. It uses a very colorful, Material Design-inspired interface that both looks great and is highly functional. Notes show up as cards that you can quickly scroll through and select. The app has Google Drive integration so you can access them online if you need to. Additionally, it has voice notes, to-do notes, and you can set reminders and share notes with people. There is just enough to be super useful without being bloated. It also has Android Wear support if you need that. Here are some more app list recommendations! It was one of the earliest apps to include stylus support and continues to be one of the best with that feature now. There is support for OneNote and Evernote along with PDF support, audio and video recording capabilities for recording lectures or meetings , and a lot more. We recommend checking out the free trial before buying it. This one uses a vertical card layout that is both easy to scroll through and easy to keep track of. It also has the ability to merge, sort, and search through your notes for better organization and discovery. On top of that, it has DashClock support, widgets, and a sketch-note mode where you can draw and doodle if you want to. It has enough features to be competitive. However, it does also keep it light. It has a bunch of features including organization features, cross-platform support, widgets, Android Wear support, collaboration features, and support for voice, text, and photo additions to notes. We highly recommend using it if you use those other services. It caters more to the long-form note taking style. That makes it great for things like journals, diaries, research notes, story writing, and others. It has a folder system for easy organization, a locking mechanism to keep things secure, and theming options. There is also a syncing feature so you can go back and forth between devices. The free version has ads and limited cloud support. The premium subscription gives you 30GB of cloud storage, no ads, and more. The only downside is that you have to subscribe to get rid of the ads. There is no single payment option. It features a no-frills, minimal layout and feature set. The app includes basic text notes, lists, light theming, and a customizable and re-sizable widget. This is the one we recommend for people who just want something easy and simple to take notes. The app is also free with no in-app purchases or ads. Just a heads up. Here are some suggestions that go great with note taking apps! Top 5 features you need to know about If we missed any of the best note taking apps for Android, tell us about them in the comments! Check out all of our app lists by clicking here!

5: Get -My Notes- - Microsoft Store

The Best Note-Taking Apps of Jot down thoughts, take pictures of things you want to remember, and keep it all at your fingertips, across your devices, with a top-rated note-taking app.

Ditch Pen and Paper: Clearing your desk of notebooks and stacks of paper is environmentally friendly, gets rid of clutter and modernizes your entire operation. Whether you need an app that converts handwriting to text, or a complete notebook management system, stop digging around for the right binder and a pen when you need something. OneNote is part of the Microsoft Office Suite, so you might already have it on your device, but if not, you can download it for free. You can run Microsoft OneNote on practically any device, including Chromebooks, Apple laptops and desktops, Windows laptops and desktops, iPhones, and Android phones. You can also use OneNote with touchscreen devices and styluses. You can create as many different notebooks as you want, and there are built-in tabs for easy labeling. You can take notes by typing, using a stylus, or drawing with your cursor or your finger. OneNote allows you to make notes wherever you want on the page, and you can add in photos, audio files, screen clips, Excel spreadsheets and online videos. You can also record audio and video directly into OneNote. One of the best things about OneNote is the ability to assign permissions to different notebooks. You can create personal notebooks that only you can see as well as shared notebooks with other people on your team. When you create a shared notebook, everyone who has access to it can make changes to the notebook, and those changes will be instantly reflected, which is great for group projects. Another reason we like OneNote for business owners is that it works seamlessly with Outlook, so you can do things like create and assign tasks in OneNote based on employee email addresses. Google Keep is exclusively a web app, which means you can use it on Android phones and iPhones, Apple laptops and desktops, Windows laptops and desktops, Chromebooks and tablets. Compatibility is never a problem. Google Keep is colorful, bright and uncomplicated. Your main Notes page will always show you the most recently added notes, and you can choose a single column view or a multicolumn view. The only downside to the interface is that it makes it difficult to read long notes and search for older items. You can easily color-code and label notes in Google Keep, and you can share those notes with other people, so they can update them as well changes are reflected in real time. The app is compatible with Android phones and iPhones as well as Apple and Windows computers. You can also download the Android app on a Chromebook, but some users say the app is inconsistent and slow on a Chrome OS. Evernote looks great on devices of all different sizes. It has lots of menu options and optional add-ons and third-party extensions and makes it easy to create lots of different notebooks, tag them and search through them. Most people find Evernote easy to use and pleasing to look at. You can take notes by typing or by writing with a stylus, your finger or the sketch tool. Just like in OneNote, you can save photos, documents, audio and video. Further, you can record audio, grab parts of web pages and snag text content from images. You can also password-protect certain notes for added security, use templates and share notebooks with certain people while keeping other notebooks private. If you plan on having your whole team use Evernote, you should consider Evernote Business. Evernote Business also allows for single sign-on, includes basic admin tools and has added security features. This app is ideal for assistants, administrative professionals, journalists, students and anyone else who frequently relies on recording audio as well as taking notes by hand. AudioNote 2 looks like an old-school notebook, which makes it ideal for note taking with a keypad or with a stylus. At the top of each "page," you can add audio files, which means you can keep the recordings of your meetings linked with your meeting notes for easy access. The playback feature in AudioNote 2 allows you to follow along with your notes automatically with highlighting and autoscrolling and adjust playback speed as needed. You can also add in PDF slides and photos so everything is in one place. In addition to offering a variety of methods of note taking audio, stylus, keypad and linking audio recordings with the notes taken during the time of the recording, this app allows users to create folders and label files, and share notes through iCloud, Dropbox, Facebook, Twitter, Email, AirDrop, and more. Additional reporting by Mona Bushnell. She is incredibly interested by the intersection of business development and environmental preservation. You May Also Like.

6: Boostnote | Boost Happiness, Productivity, and Creativity.

Google Keep is the simplest note-taking app on our list, both visually and how it operates. Think of Keep as your place for storing digital post-it notes, with each note dotted around the.

Geeknote – Evernote Console Client So why I have started to write this content on the best Evernote alternative app or note-taking app for Ubuntu Linux? Geeknote – Evernote Console Client Geeknote is an unofficial command line client to the Evernote app. It helps you to create or delete notes using any terminal text editor, sync directories, read notes in terminal and much more. And in this sector, Evernote was the best and unbeatable. But now the thing has been changed. There are a lot of open source note taking apps available in the market which can be used as independent software or as Evernote alternative for the Ubuntu Linux system. Here I tried to include all the best alternatives to Evernote notes taking apps for Linux. Also, let me know if I missed any essential apps to include on this list.

7: The best note-taking apps in | TechRadar

8 Best Note-Taking Apps For Android In 1. ColorNote. ColorNote is a full-featured Android note taking app. It is not necessary to log in to the app, but you must do so if you wish to sync.

Review Jill Duffy The Best Note-Taking Apps of Jot down thoughts, take pictures of things you want to remember, and keep it all at your fingertips, across your devices, with a top-rated note-taking app. Note-taking apps are not all created equal. In fact, the deeper you dig into them, the more you realize how different they all are in terms of what they offer in both concept and abilities. While a solid note-taking app is a necessary piece of any suite of productivity apps, figuring out what to do with it in the first place is half the challenge. Getting the right note-taking app is as much about finding one that clicks with you as it is about the nitty-gritty details of the service. In general, however, a reliable note-taking app lets you jot down all the things you want to remember quickly, easily, no matter where you are, and likewise lets you refer to all those notes anytime and anywhere. Evernote caused a ruckus over the past few years among its paying users for hiking the price and slashing the lower tiers of service. While many people are thinking about leaving Evernote, the sad state of affairs at the moment is that nothing lives up to it. OneNote is a close second, but transitioning to it from Evernote is tough. The two services have structural differences that make it difficult to map one set of notes into the other app. There are alternatives, of course, and hopefully some of them will get better in time. Zoho Notebook is a fine example. With the rebirth of Zoho Notebook, we should soon see more apps and additional functionality in this rookie service. Pricing and Plans A huge part of the reason people got miffed at Evernote was its price hike. It costs more than any other note-taking and syncing app. While it does have a free version, nonpaying Evernote members are limited to syncing their notes among only two devices and the Web app. Evernote accounts come in four tiers of service: The free tier lets you upload only 60MB of data each month, but the data you use is yours to keep. So technically speaking, the total storage is unlimited because you get more every month ad infinitum. Google Keep is free with no upsells or special plans. All it requires is a Google account. The amount of storage space you get in Keep is dependent on your Google Drive storage, which is 15GB by default. There is an upload limit for images of 10MB and 25MP. OneNote is also free with no special upgrades for extra features. The max file upload size is MB. Simplenote is a free service with no upgrades or in-app purchases. Features Worth Having A few features worth having in a note taking and syncing app are optical character recognition OCR, a good Web clipper, and organizational tools that work for you. OCR comes in handy when snapping pictures of text. Evernote Premium can run OCR on all text in images, including handwriting, when you look for words in a search. It also has a useful Digital Ink feature that turns your own handwriting into typed text when you use a tablet. A Web clipper is another great feature for your note-taking app if you often find things on the Web that you want to save. For example, I clip a lot of recipes that I find online into my note-taking apps. Evernote and OneNote have Web clippers, and both give you options for saving the entire page or just core elements. In terms of organizational tools, every app is different, but the important thing is you have an interface that makes sense to you and that helps you find what you need when you need it. Evernote uses notes, notebooks, stacks of notebooks, and tags, whereas OneNote has pages, sections, and notebooks. Hopefully, the uproar caused by Evernote will light a fire under competitors to hurry up and improve their apps. There are a lot of promising apps, but most of them need more time to mature. The read the capsule reviews below, and, if one of them sounds interesting, please be sure to click through to the full review for more details. Featured Note-Taking App Reviews:

8: The 10 Best Note Taking Apps in Evernote, OneNote, and Beyond

Take Notes Better Notes, Use an App. For the right kind of person, note-taking apps can be an excellent step up from paper notebooks, but not all such apps are created equal.

It supports Markdown formatting in lieu of presenting an excess of menu options although it does allow you to work with fully viewable inline images. Bear also offers a focus mode that strips away unnecessary bells and whistles from your view. You can add tags to organize your notes by simply using hashtags within the note body. And Bear stores all your notes as plain text, which keeps the app lightweight. Other features include an info panel for each note showing word count and other metadata, as well as web clipping, or the ability to automatically copy the contents of web pages to one of your notebooks via a browser extension. There are some showstoppers worth knowing about before you choose Bear. The developers who make the app have said that a web app is in the works, but they have yet to pin down a release date. Finally, the free account comes with some limitations that make it less than ideal as a note taking app no syncing, limited export formats , so be prepared to pay for a Pro subscription. What makes it special for programmers? When you create a new note, you choose either Markdown note, used for creating any kind of text document, or snippet note, which simply gives you a text editor for code. When creating and editing Markdown notes, Boostnote puts an extra panel on the right side of your window to preview the formatting of the note as you write. You can create any kind of notes you want in this note type. Markdown notes even support LaTeX blocks, for those writing hefty mathematical formulas. With Boostnotes, you can work with text snippets, too. Text snippets are lines of text you tend to use repeatedly, whether boilerplate or particular lines of code. Other excellent features include customizable hotkeys, the ability to change the font, and dozens of light and dark visual themes for the interface. Storage is entirely in your hands with Boostnote, so you can keep your notes saved locally and percent offline, or you can pop them into a file storage and syncing service of your choosing to make them accessible to you everywhere.

Evernote Android, iOS, macOS, web, Windows Best note taking app for taking and searching for notes of all kinds Evernote was an early leader in the digital note taking space. In many ways, it shaped expectations about what a note taking app should do and how it should look. It has apps for all the major platforms, and with a Business account, you can even use Evernote for real-time chat and collaboration with colleagues. Evernote also doubles as an excellent scanner, and if you combine those two features, you can use the app for some pretty interesting projects, such as digitizing recipes from books. Evernote also integrates with other apps and tools you use, such as Google Drive, Slack, and Salesforce. Evernote handles all the syncing and storage. Basic members that is, those on the free plan get 60MB of space per month for storing notes and uploading files. While Evernote looks squarely like standard business software, Microsoft OneNote mimics paper. When you create a new note, you can click anywhere on the page and add content to that spot, just as if you were working with paper, rather than be tied to the linear movement of the cursor. You can choose a background for your notes that looks like textured or lined paper or use templates for meeting notes and more. OneNote also mimics the classic binder, with notebooks, sections, and tabs for organizing your notes. With OneNote, you can type text, drag and drop images and file attachments into notes, use a digital highlighter, create checklists, record audio, draw sketches, and so forth. And because each note is meant to appear like a piece of paper, you can move elements around the page, placing an audio memo next to a block of text, for example. For every note you can open a record of its version history, too. And an ink-to-text feature lets you write by hand and have your text converted to type. OneNote also integrates with other apps, such as mobile scanning app OfficeLens and the paperless system NeatConnect. You can create more OneNote integrations using Zapier. OneNote is free to use, with no feature limitations in the free version. Syncing occurs via Microsoft OneDrive, and non-paying members are capped at 5GB though you can earn additional space through some promotions and purchases. Microsoft OneNote is perhaps the best free note taking app you can find. Milanote also has a web clipper tool, so you can easily snap images online and add them to your visual notes. There are no mobile apps or desktop apps at this time, just a web app and a mobile-optimized site. It does support collaboration and sharing, however. Milanote handles syncing, storage,

and backup rather than handing off those responsibilities to a third party. Free Milanote members have some tight limitations on what they can upload: Pro members get unlimited storage unlimited notes, images, links, and files , plus a search bar for all their content. Milanote Pro costs much more than other options, including Evernote Premium, however. You can use it to create all kinds of notes with your fingertips or a stylus, whether a sketch, annotated image, or handwritten text. Beautifully designed with a minimalist bent, Paper incorporates animations that make it inviting and fun to use. It has some tools for organizing your notes, too, such as the ability to group them into notebooks and share them. The Paper app also lets you choose different pen types and colors. Draw simple loops, for example, and Paper knows to turn them into neat circles. Choose the pen tool, and your writing will magically look like calligraphy. If you prefer to type on a keyboard, you can do that as well, writing text notes, checklists, and so forth. Paper also gives you a few special tools for creating business diagrams. The tip lets you create pressure-sensitive drawings, while the reverse side acts as an eraser. The app used to backup your notes for you, but the company no longer does as of March , so be sure you have adequate space in an iCloud account before committing to Paper. This online app lets you work with others on notes, documents, and spreadsheets while discussing the work in the same place. Quip shines brightest when you used it to collaborate with others. Quip is thorough in how it saves, documents, and displays every single suggested edit, question, and comment in your notes. It provides complete visibility into how the collaboration process works. You can connect your Quip account to other tools, such as Dropbox and Google Drive, and you create other Quip integrations by using Zapier. With Quip, you and your teammates can create folders and subfolders to organize your notes. The search function is reliable, but not especially fast, given Quip accounts often have a lot of data beyond plain text in them. With a paid plan you get unlimited storage, too. True to its name, Simplenote gives you a clutter-free space for creating and editing notes. You get little more than an unlimited number of blank white pages for making plain text notes. Simplenote is a pure minimalist in the note taking app category. Seeing as you can save nothing but typed text, the search functionality is fast. Syncing and storage comes included. You get a version history for all your notes and the ability to restore any prior version. You also get tags for sorting and organizing your notes, plus options for sharing and collaborating with others. Simplenote can run in any browser, and there are apps for all the major platforms as well. The app was designed to have low latency, meaning as soon as your stylus or finger drags across the screen, the mark in the app should show up immediately, with little to no delay. In the app, your options for paper include blank white pages, lined pages, staff paper for music, and gridded graph paper in a variety of styles. You can write or draw freeform, as well as import images and PDFs to annotate them. Squid supports digital signatures, too, so you can import a document that you need to sign, scribble your name on it, export it as a PDF, and send it to the recipient. Squid includes other tools for capturing, organizing, and editing notes. While the app is free to download, Squid sells a Premium subscription that unlocks all the paper backgrounds, tools, and a few capabilities you might actually need. Some of the features restricted to Premium are a highlighter; a few shape tools; the ability to import PDFs for markup; and the option to backup, restore, and bulk export options using Box or Dropbox. Squid is one of the best apps for Android and Chromebook that supports handwriting, image and PDF markup, and other ways to take notes. When you first create an account, the app encourages you to create a few notebooks, which appear on screen as notebooks with different images for their covers. You can name them however you like. As you create notes, whether by typing them, uploading images, or clipping them from web pages, you can add rich text formatting. Your notes then appear as cards with preview images when applicable. You can also lock notes, add time and date reminders to them, view their full version history, and revert back to an earlier version. Zoho directly manages saving and syncing, and the company gives you as much storage space as you need, with no limit. There is a maximum file upload size of 50MB, however. Note taking apps come in many shapes and sizes to meet different needs. Some people may need a fully loaded app with a lot of functionality, such as OneNote or Evernote, while others prefer less clutter and fewer features, which is what you get from an app such as Simplenote. Not all note taking apps are free, but most of them offer at least a free trial, if not a free version with limitations, so that you can try out a few before settling on the one that works best for you. 9: Best Note Taking App | Organize Your Notes with Evernote

If you want multimedia notes, Zoho's Notebook is the best note-taking app for iOS in If simplicity is more of a blessing than a curse, Simplenote keeps distractions at a minimum. Bear is the note-taking app for web writers.

Jill Duffy Take Notes Better Notes, Use an App For the right kind of person, note-taking apps can be an excellent step up from paper notebooks, but not all such apps are created equal. In fact, the deeper you dig into them, the more you realize how different they all are in terms of what they offer in both concept and abilities. While a solid note-taking app is a necessary piece of any suite of productivity apps , figuring out what to do with it in the first place is half the challenge. Getting the right note-taking app is as much about finding one that clicks with you as it is about the nitty-gritty details of the service. In general, however, a reliable note-taking app lets you jot down all the things you want to remember quickly, easily, no matter where you are, and likewise lets you refer to all those notes anytime and anywhere. Evernote caused a ruckus over the past few years among its paying users for hiking the price and slashing the lower tiers of service. While many people are thinking about leaving Evernote , the sad state of affairs at the moment is that nothing lives up to it. OneNote is a close second, but transitioning to it from Evernote is tough. The two services have structural differences that make it difficult to map one set of notes into the other app. There are alternatives, of course, and hopefully some of them will get better in time. Zoho Notebook is a fine example. With the rebirth of Zoho Notebook, we should soon see more apps and additional functionality in this rookie service. Pricing and Plans A huge part of the reason people got miffed at Evernote was its price hike. It costs more than any other note-taking and syncing app. While it does have a free version, nonpaying Evernote members are limited to syncing their notes among only two devices and the Web app. Evernote accounts come in four tiers of service: The free tier lets you upload only 60MB of data each month, but the data you use is yours to keep. So technically speaking, the total storage is unlimited because you get more every month ad infinitum. Google Keep is free with no upsells or special plans. All it requires is a Google account. The amount of storage space you get in Keep is dependent on your Google Drive storage, which is 15GB by default. There is an upload limit for images of 10MB and 25MP. OneNote is also free with no special upgrades for extra features. The max file upload size is MB. Simplenote is a free service with no upgrades or in-app purchases. Features Worth Having A few features worth having in a note taking and syncing app are optical character recognition OCR , a good Web clipper, and organizational tools that work for you. OCR comes in handy when snapping pictures of text. Evernote Premium can run OCR on all text in images, including handwriting, when you look for words in a search. It also has a useful Digital Ink feature that turns your own handwriting into typed text when you use a tablet. A Web clipper is another great feature for your note-taking app if you often find things on the Web that you want to save. For example, I clip a lot of recipes that I find online into my note-taking apps. Evernote and OneNote have Web clippers, and both give you options for saving the entire page or just core elements. In terms of organizational tools , every app is different, but the important thing is you have an interface that makes sense to you and that helps you find what you need when you need it. Evernote uses notes, notebooks, stacks of notebooks, and tags, whereas OneNote has pages, sections, and notebooks. Hopefully, the uproar caused by Evernote will light a fire under competitors to hurry up and improve their apps. There are a lot of promising apps, but most of them need more time to mature. The read the capsule reviews below, and, if one of them sounds interesting, please be sure to click through to the full review for more details. Featured Note-Taking App Reviews:
