

1: Nursing Pharmacology Made Incredibly Easy!, Third Edition

The Nursing Made Incredibly Easy series breaks concepts into plain English and explains thoroughly. This book is no exception. There is no bleed through of print on the quality of paper used, as some pharmacology texts have.

Pharmacology is the study of how a drug works on the body, its side effects on the body, and the way the body uses the drug. Most nursing students find pharmacology a tough course because you are required to know the name, side effects, nursing interventions, and the way the body uses the drug in such a short amount of time. Normally, a student takes a pharmacology class in one semester and may be given only 3 weeks to learn chapters of material. Common problems students have in pharmacology Developing a study method to use! Students tend to get overwhelmed by all the material they are required to know for a pharmacology exam and feel defeated when trying to develop a study method. Learning what material is essential to know and what is not! The best approach is to memorize the drug group by suffixes and pre-fixes or classification. This will be discussed in the study strategies below. It is really hard to juggle other classes along with pharmacology. Some students make the mistake of not setting aside enough time to prepare for an exam. Most drug classes work on the same system of the body and have the same side effects. These classes tend to have similar pre-fixes and suffixes. If you try to remember similar pre-fixes and suffixes rather than individual drug names, you will be able to study the material easier. Furthermore, it helps eliminate trying to learn individual side effects and their pharmacokinetic abilities. A set of cardiac medications known as beta blocker have a similar suffixes known as lol. Here are three beta blocker: Metoprolol , Atenolol, Propranolol. These drugs also have same side effects such as slow heart rate, cold hands, feet, tiredness etc. Another example can be applied to when you are studying antibiotics. Most antibiotics are broken down by classification such as macrolides. These drugs are metabolized in the same areas as well and have similar side effects. This is really one of the best ways to study for pharmacology. Either you can make your own flash cards by using index cards or buy some. Then after creating the card it is a great idea you repeat them aloud. It is best practice to create flash cards after each lecture class. In addition, every day when you have downtime, review the flash cards. As a side note, there is a free site call studystack. Get a drug guide! When you are making your flashcards you can easily flip to the drug name and find the side effects and common nursing interventions. This prevents you from flipping through your textbook which usually has the material scattered everywhere. The drug book condenses it down. Here are popular drug guides! I recommend using Pinterest or searching for it through Google. You can do this with a classmate or to yourself. When you develop a teaching plan and teach others, it requires you learn the material and completely understand it on a critical-thinking level. Get a study guide! Some professors will give out study guides a few days before the test to tell you want drug categories you will need to concentrate on. I suggest pick one or two of these strategies and make them your own. You may be interesting in: Any purchase you make through Amazon.

2: Nursing Pharmacology Made Incredibly Easy! - Google Books

Nursing Pharmacology Made Incredibly Easy! contains everything the nurse needs to review and the nursing student needs to learn about how drugs act and interact in the treatment of disease.
