Click on the links to view a picture and find more information on them. Striped Colonial Anemone Source A Acantharea " A kind of protozoa microscopic creature that has really cool skeletal structures. They look like diamonds. Anemone " A predatory ocean creature that has over 1, different species. They are known for their tentacles that come out from a polyp base. They can have anywhere from 10 to a few hundred. Ahi Tuna " The same thing as yellowfin tuna; this fish can get very bit up to pounds. Albacore " A popular fish for eating, albacore tuna can grow to be up to 60 kg. They can never rest because they need to swim in order to breathe. American Oyster " These grow to between three and five inches in length; these animals are found in the Chesapeake Bay and are popular for eating. Anchovy " Small, common saltwater forage fish that is an important food source for many species of animals. There are over species of anchovy. Arctic Char " This fish is the only kind that dwells so far to the north. There are some types that breed in fresh water and then migrate to the sea. Atlantic Bluefin Tuna " One of the fastest, largest, and most beautiful fish in the entire world. It has a torpedo-shaped body for speed. Atlantic Cod " One of the most important fishes for commercial fishing in Northern America and Europe. Its wild populations have been severely overfished. Atlantic Goliath Grouper " This is one of the largest members of the ocean bass family. Its body is very wide. It lives in coral reefs and can get up to three feet long. Limitless and immortal, the waters are the beginning and end of all things on earth. They strain huge amounts of water through their teeth to get enough small animals like krill and zooplankton to eat. Banded Butterflyfish " This is a kind of fish that lives in coral reefs in the western Atlantic ocean and has beautiful black and white bands on it. Banded Coral Shrimp " A native of the coast of Indonesia, this shrimp has pretty white and red bands on it and grows to be up to three inches long. Banded Sea Krait " This is a poisonous sea snake with venom ten times as powerful as that of a cobra. Barnacle " A barnacle is a kind of crustacean and lives its life stuck to rocks and other surfaces. They can even live on other animals, like whales or turtles. Barndoor Skate " A skate is similar to a ray and is a large, flat fish made mostly of cartilage. This kind of skate can grow to be up to five feet long. A Barracuda Source Barracuda " This fish is known for its scary looks, long teeth, and the fact it can reach almost 7 feet long! Basking Shark " The second-largest living fish, the basking shark eats plankton to survive. The biggest one ever found reached Bass " There are many kinds of bass. Some live in the ocean, and some live in fresh water. Beluga Whale " This whale is also called a sea canary because of its wide range of twitters, clicks, and calls. Bluebanded Goby " This is a small, brightly colored fish that lives on reefs in the Pacific Ocean. Bluefish " This fish lives in the middle of the ocean and is also called "elf" on the west coast of South Africa. Bluestreak Cleaner-Wrasse " This fish sets up cleaning stations where other fish come while it eats all the parasites off of them. Blue Marlin " A large fish with a long spike coming out of its head like a fishing rod. Blue Shark " This shark gives birth to live young, and can give birth to up to young at a time. Blue Tang " Brightly-colored reef fish that is electric blue with a yellow tail, native to the Indo-Pacific reef region. Blue Whale " The largest animal alive, and the heaviest animal to have ever existed, the blue whale can get to be almost feet long as long as an American football field. Broadclub Cuttlefish " Cuttlefish are not fish, but mollusks. They have tentacles and a large head like an octopus or squid. Bull Shark " An aggressive shark that can be found in brackish waters and rivers that lead to the sea. They are responsible for most near-shore shark attacks. Then there are the squids and cuttlefish, and the porpoises, dolphins and great whales. Its shell, when cut open, has almost a perfect spiral inside of it. Chilean Basket Star " This is a deep-sea dwelling sea star that looks almost like a tree. Its arms divide into basket shapes from which the star takes its name. Chinook Salmon " By far the largest of all salmon, this salmon can grow up to forty pounds. They migrate from the ocean into rivers to spawn. They spawn once and then they die. Clam " A generic term for many different kinds of bivalves animals that have a shell that closes. Clown Anemonefish " One of the best-known types of anemone fish, the clown fish has broad orange and

white stripes and lives in anemones. All clownfish are born male. Clown Triggerfish â€” This is also called the big-spotted triggerfish because of the large white spots it has on its underside, which contrasts with black spots on its yellow top. It looks really cool! Cod â€” A common name for many kinds of white fish, some of which are popular for eating because of their flaky texture. Coelacanth â€” This fish was thought to be extinct until one was discovered in It lives 2, feet beneath the surface of the ocean, can grow up to six feet long, and lives up to 60 years. Cockscomb Cup Coral â€” A kind of stony coral that lives in the deep sea and in cold-water fjords instead of shallow reefs. Fangtooth Source Common Fangtooth â€” This is a fearsome-looking fish with huge gaping jaws. It is actually very small, though, and not at all dangerous for humans. Conch â€” A large sea snail that produces a very pretty shell for which it is famous. Cookiecutter Shark â€” This fish gets its name for its habit of gouging round circles out of its prey so that it looks like the wound was made with a cookie cutter. Coral â€” Invertebrates that are best known for building the beautiful reefs that support many different kinds of marine life. Corydoras â€” A kind of armored catfish. Cownose Ray â€” A species of eagle ray that can reach a span of up to 84 inches. Cushion Star â€” A type of starfish that got its name because of its pillowy appearance. Cuttlefish â€” Similar in appearance to a squid or octopus, the cuttlefish has a unique internal shell, known as the cuttlebone. The least movement is of importance to all nature. The entire ocean is affected by a pebble. Killer whales are actually a kind of dolphin. Dolphinfish â€” These are completely unrelated to dolphins and are a kind of fish, also known as Dorado or mahimahi, that is popular for its meat. Dory â€” This name is a name applied to several different kinds of fish that have big eyes, are flat taller than they are wide , and have a circle shape. Many dwell in the deep sea. Devil Fish â€” This is another name for the giant manta ray, which has been found at a maximum recorded length of 17 feet. It is very endangered. Dugong Source Dugong â€” This is a kind of sea mammal that is related to the manatee. It can live to be up to seventy years old. Dumbo Octopus â€” This is the deepest living of all octopus species. It lives at 9, or 13, feet beneath the surface of the ocean. It grows to be between 7. E Eccentric Sand Dollar â€” Also just called the western sand dollar, this is a kind of flattened burrowing sea urchin that can be found on the Pacific coast from Alaska to Baja California. Edible Sea Cucumber â€” A scavenger that looks like a worm and lives on soft bottoms near coral reefs and seagrass beds. It is a popular food to eat, especially in Asia. Eel â€” There are different kinds of eels, and most of them are predators. They can be just 2 inches long, or up to 13 feet long. Licensed under Public Domain via Commons Source Elephant Seal â€” Males of this species have a long snout, which is where it gets its name. Elkhorn Coral â€” This is a very important type of reef-building coral since it is one of the fastest growing. Emperor Shrimp â€” Emperor shrimp live on other animals, cleaning them of parasites and helping them fend off predators. Estuarine Crocodile â€” This is the largest of all living crocodiles and the largest terrestrial predator in the world. It can get to be 17 feet long. I had fought on behalf of man against the sea, but I realised that it had become more urgent to fight on behalf of the sea against men. Some of them have soft spines that cover their bodies. Fiddler Crab â€” The males of this crab species have one claw that is much, much bigger than the other one. Fin Whale â€” This is the second largest animal alive after the blue whale.
