

1: Category:Threesome with one man and two women - Wikimedia Commons

The American's Bulletin has been continuously published for 44 years, as a true First Amendment - Free Press newspaper to inform and educate our subscribers and readers on a wide variety of topics, within the Freedom Movement, as an alternative newspaper to the corporate foreign owned main-stream newspapers.

Thousands and thousands of green acres were part of it, forests were part of it. It drew in and consumed land and gave back the dung from its pens, and the soot from its chimneys, and steel, and saucepans, and all the tools by which its food was made. And also clothes, and fashions, and ideas, and interesting vices, songs, and knowledge, and something which, if looked at in the right light, was called civilization. That was what civilization meant. It meant the city. They are population sinks, and always have been. In the world was 3 percent urban; in 1800, 14 percent urban; in 1900, 50 percent urban. If she moves to town, she can get a job, start a business, and get education for her children. The move to town is a liberation. A New York Times story in 1990 related that Gandhi idealized villages as the way to return Indians to their precolonial state. Tokyo is the only surprise in that top-ten list. Fifty years later, in 1940, the leading ten cities had doubled in size, and Shanghai, Buenos Aires, and Calcutta had joined the list. Fifty years after that, in 1990, the top ten cities had further tripled in size, but that was the least of their changes. They are working like hell to make that happen, whereas we are consuming like hell. In Africa the supernova-like growth of a few giant cities like Lagos from 1 million in 1950 to 10 million today has been matched by the transformation of several dozen small towns and oases like Ouagadougou, Nouakchott, Douala, Antananarivo and Bamako into cities larger than San Francisco or Manchester. The oldest universities, in Bologna and Paris, have lasted only 1,000 years so far. The oldest living mainstream religions, Hinduism and Judaism, date back about 3,000 years. But the town of Jericho has been continuously occupied for 10,000 years. Its neighbor Jerusalem has been an important city for 5,000 years, even though it was conquered or destroyed thirty-six times and endured eleven conversions from one religion to another. Many cities die or decline to irrelevance, but some thrive for millennia. I suspect that one cause of their durability is that cities are the most constantly changing of organizations. In Europe they consume 2 to 3 percent per year of their material fabric buildings, roads, and other construction through demolition and rebuilding. Countries that are highly urbanized have higher incomes, more stable economies, stronger institutions. They are better able to withstand the volatility of the global economy than those with less urbanized populations. Instead of just compiling numbers and filtering them through remotely conceived theories, the researchers hung out in the slums, talking to people. They came back with an unexpected observation: That growth rate hit a wall in with the world financial crisis. Growing affluence has brought a return of the city-state in some places. The independent power of a Singapore or Dubai rivals that of ancient Athens or fifteenth-century Venice. Cities do the same. Average walking speeds increase. Businesses, public spaces, nightclubs, and public squares consume more electricity. We need more metropolises. Surplus food freed people to become specialists. Jane Jacobs upended that supposition in *The Economy of Cities*. Entry was by retractable ladders. When defense against raids by nomadic Apaches and Navajos became irrelevant after the conquest by whites, the Pueblos all dispersed into scattered buildings except where high-rise density is maintained partly for tourists, as at Taos and Acoma. Crucially, if protected from hunters, nearly every bird and mammal species found in primary forest has also been found in secondary. Why would anyone leave a brick house in the village with its two mango trees and its view of small hills in the East to come here? The author of *Shantaram*, Gregory David Roberts, writes with all of the intensity and journalistic detail of a Victor Hugo, but from a level of experience that Hugo never had. We sat, we chatted. Lenders have learned that microfinance credit works best when provided to women instead of men; and women are the more responsible holders of property deeds. *The Challenge of Slums* summarizes: However, one out of every four countries in the developing world has a constitution or national laws that contain impediments to women owning land and taking mortgages in their own names. For the first time in her life she had got rid of her husband, her in-laws, her village and their burdens. A few months after she arrived, Shimu, now able to support her children, mustered the courage to return to her town and file for divorce. In her village none of this would have been

possible. But she thinks that when she is older she will go back there. She plans to buy a piece of land and settle there. That bond back to the village appears to be universal. They will be taken there to be buried on ancestral land when they die. Religious groups have a stronger support role in the slums than most people realize. As Mike Davis wrote in *New Left Review*, Populist Islam and Pentecostal Christianity and in Bombay, the cult of Shivaji occupy a social space analogous to that of early-twentieth-century socialism and anarchism. Praise be to plastic pipe. All honor the prefab window. Bow down to sheets of old plywood, stock-model sinks, mass-produced tile. Each home is built that way, and so is the whole community. Prince Charles has the same opinion. Field researchers in Thailand for the UN report found that All slum households in Bangkok have a colour television. The average number of TVs per household is 1. Two-thirds of the households have a CD player, a washing machine, and 1. Half of them have a home telephone, a video player and a motorcycle. Back in , Janice Perlman interviewed residents in the favelas of Rio. Everyone is working hard and everyone is moving up. In many cities, the roughest slums are pressed right up against the most affluent neighborhoods. At the entry level, the informal economy is organized around pittance. On the whole, dime-a-day for-profit schools are doing a better job of teaching the poorest children than the far more expensive state schools. For that matter, how did global crime do? Did the rate of urbanization slow down or speed up? How wrong was I? Infrastructure may be hidden in the formal world, but not in squatter cities. It is do-it-yourself infrastructure. AES , a global energy company serving the developing world, invited me to a conference in Buenos Aires in AES, among many other corporations, was inspired by C. Eradicating Poverty Through Profits Prahalad writes that the poor shop after seven p. Corporations are right to pay attention to what is now referred to as the BOPâ€”bottom of the pyramid. A large portion of humanity on the loose, trying new things in new cities, is a lot of potential customers, collaborators, and competitors, and while the income of the poor is currently small, it is growing fast. And the aggregate numbers are formidable. A book, *The Next Four Billion* , declares: That zone is a wilderness inhabited already by large populations worldwide, but officially denied and rarely described. Today they are afraid of dying in the crossfire between drug dealers and police or between rival gangs. In his seminal book, *The Other Path* , he was the first to honor the way the informal economy works, based on research in the squatter communities of Lima. His theory was that squatters could break out of poverty if only they could get bankable title to their shacks. Neuwirth wrote in *Shadow Cities*: When they know they are secure, they build.

2: September 2017 Daily Bulletin

The American's Bulletin (TAB) was created with a simple mission: to alert American people to the insidious lie that, for decades, has been perpetuated by the government of the United States, and to show Americans everywhere how to navigate their way through the deception and dissembling to achieve true freedom.

The hidden toll of American drones in Yemen: A drone struck a car carrying Ali who was returning to Marib with a relative after dropping his family at a house of relatives. Nearly 70 kilometers from Marib, at 3: But the campaign has had a hidden cost: There is no comprehensive count of civilian deaths because of the difficulty of confirming identities and allegiances of those killed. But in an examination of drone strikes this year alone, The Associated Press found that at least 30 of the dead likely did not belong to al-Qaida. That is around a third of all those killed in drone strikes so far in The Pentagon does not release its assessment of the death toll, but an independent database considered one of the most credible in tracking violence in Yemen counted 88 people " militants and non-militants " killed by drones this year. The AP count gives a glimpse, even if incomplete, into how often civilians are mistakenly hit by drone strikes, at a time when the Trump administration has dramatically ramped up the use of armed drones. It has carried out strikes during its nearly two years in office, compared to the strikes during the entire eight years of the Obama administration, according to a count by the AP and the Bureau of Investigative Journalism. The AP based its count on interviews with witnesses, families, tribal leaders and activists. Most of those killed, 24, were civilians; at least 6 others were fighters in pro-government forces " meaning ostensibly on the same side as the U. Immensely greater destruction has been wreaked by U. In comparison, the toll from U. S drones in Yemen runs in the hundreds, including both militants and civilians. Several databases are trying to track the deaths, with varying results. The Bureau for Investigative Journalism counted up to 1, killed by strikes from to , under President Barack Obama, compared to up to killed in and Counting civilians among those numbers is complicated by the difficulty in determining who belongs to al-Qaida in a country of multiple warring militias. Al-Qaida has joined the battle against the Houthis, and many of its fighters are incorporated into militias armed and funded by the U. The campaign has scored some military successes. But drones have been most effective in forcing al-Qaida to limit its movements and hide in the mountains, avoid large gatherings and restrict cellphone use. The group withdrew from areas it controlled in the south but was allowed to keep weapons and money under secret deals it struck with the United Arab Emirates, a coalition member. Over the years, the cost of the pursuit of senior leadership has been high. For example, the U. Those deaths came in two raids reportedly targeting al-Rimi. The first was in in the southern village of al-Majalah. The civilian deaths come in a war conducted from a vast distance. Drone pilots work remotely at American bases, most often in the U. They have a list of characteristics, and if a subject on the ground shows a number of them, he could be targeted, a former participant to the drone program told the AP, speaking on condition of anonymity to discuss the operations. Mistakes happen from bad intel or misjudging behavior, he said. Rights groups have expressed concern that some of the intelligence may come from prisoners held in jails run by Emirati-backed militias where torture is widespread. Some of the strikes from that the AP examined appeared to be mistakes. The slain men had just returned from mediating a local dispute. In a country where tribal links are powerful and the justice system nearly non-existent, such mediations are common to resolve conflicts over land or deaths. He was killed along with a construction worker passing by at the time, according to relatives and three local human rights workers, who spoke on condition of anonymity for fear of reprisals. Further east, in Hadramawt province, drones carried out several consecutive days of strikes in March, targeting vehicles on a main highway. Some of the strikes killed al-Qaida militants, according to rights activists in the area. But others struck down cars carrying people who had fled to the area from a nearby province, Jawf, to escape fighting. Four days later, another car was hit, killing six men and boys, including a year-old and an year-old, travelling to a funeral. Saleh al-Wahir, the brother of one of the dead, was in a car behind them. He lost his legs and an arm and was burned all over his body. The four others in the car " his brother, uncle, cousin and another relative " were all killed. None were connected to al-Qaida, said al-Mandhari, a civil servant. Two other relatives and the three rights

workers in Bayda confirmed his account. Since the attack, al-Mandhari has spoken to the media and rights groups, seeking ways to get compensation and an apology from the U. On May 14, two men, Hussein al-Dayani and Abdullah al-Karbi, were killed when a drone struck their pickup truck in an area of Shabwa province where al-Qaida is known to have a presence. He said his brother was a fighter in a militia battling the Houthis. Two weeks later, a year-old, Mahdar Hussein al-Hag, died in a strike while driving his motorcycle in the same area. The official spoke on condition of anonymity because he was not authorized to talk to the press.

This match, held every four years, nominates athletes to represent the United States at the m World Championships, due to be held in , in Granada, Spain. With much smaller scoring rings than NRA targets, the m target can bedevil even the most experienced High Power shooters, especially in tricky wind conditions. The competition took place in unseasonably mild weather for this time of the year in Georgia. As the popularity of m shooting is limited in the United States, 21 shooters in total took part in four days of competition. Despite the light participation, the athletes included some of the best international rifle shooters in the country. The relaxed and club-like atmosphere belied intense and high-level competition on the firing line. Electronic targets record all shots as 10, 9, 8, etc. Each whole number score is accompanied by a more precise score that ranges from An official 10, for example, could be anything from 91 on the edge of the ring , all the way to dead center. The more precise score is NOT used officially for score keeping in ISSF competition, but could be in the future, as already is the case in 50m prone and 10m air rifle. Athletes shot in three positionsâ€”kneeling, prone, and standing â€” using free rifles, mostly chambered in 6BR. Under ISSF rules, men fire 40 record shots in each position, while women fire 20 record shots in each position. Each event is repeated on the second day, and the two-day aggregates determined the winner. The prone and Standard Rifle events followed in the second half of the competition. The m prone match is shot by both men and women, using same free rifles as in the 3P events. The Standard Rifle match is another 3-position event, except contested only among men, using rifles strictly limited in external shape and adjustability. Cooler temperatures and intermittent rain made conditions trickier to read than during the first two days. Equally noteworthy is the third place finisher Steve Goff. Civilian shooters mostly shoot the 6mmBR as well, also preferring Berger bullets. There was one shooter using 6. I doubt that most world-class m shooters concern themselves too much with these matters. The 6BR is simply good enough. It holds well inside the Ring, is relatively economical, and offers extremely long barrel life when using mild factory loads. Longer cartridges such as 6. One of the advantages of 6. But looking back now, the greater recoil and extra cost in brass and powder are probably not worth it. Handloads â€” Cost Considerations One of the advantages the AMU shooters enjoyed over the civilians is that the Unit marksmen had an unlimited supply of ammo, and therefore could shoot as many sighters as they wished. We civilians had to settle with under 10 sighters, in order to leave enough for the match. Unless you are filthy rich or have someone else paying for the ammo, reloading is definitely the only way to go. A reloaded round costs under 50 cents a piece.

4: Who Won "The Voice" ? Season 14 Finale Results & Recap

I have found two court decisions in the last five years involving prison inmates and the filing of bogus liens that mentioned a book or booklet titled "One Man Out: The Redemption Process Formulated for the Incarcerated".

Why are Native American women vanishing? AP " The searchers rummage through the abandoned trailer, flipping over a battered couch, unfurling a stained sheet, looking for clues. Not when a loved one is still missing. The group moves outside into knee-deep weeds, checking out a rusted garbage can, an old washing machine " and a surprise: Since then her older sister, Kimberly, has been looking for her. She has logged about 40 searches, with family from afar sometimes using Google Earth to guide her around closed roads. But if I have to, I will. Outside, the group stumbles upon something intriguing: After studying the bones, one officer breaks the news: There will be no breakthrough today. Tomorrow the searchers head to the mountains. These are grandma, these are mom. This is an aunt, this is a daughter. This is someone who was loved One story hits particularly close to home. Their 7-year-old cousin, Monica, disappeared from a reservation school in Her body was found frozen on a mountain 20 miles away, and no one has ever been arrested. There are many similar mysteries that follow a pattern: There may be a quick resolution. So why does this happen? MacDonald offers his own harsh assessment. Department of Justice prosecutes major felonies such as murder, kidnapping and rape if they happen on tribal lands. Missing person cases on reservations can be especially tricky. The Bureau of Indian Affairs? They might want to help, but a missing person case without more is not a crime, so they may not be able to open an investigation. Do I go to one of the county sheriffs? Native women, she says, have long been considered invisible and disposable in society, and those vulnerabilities attract predators. Some families start their own investigations. Matthew Lone Bear spent nine months looking for his older sister, Olivia " using drones and four-wheelers, fending off snakes and crisscrossing nearly a million acres, often on foot. The year-old mother of five had last been seen driving a Chevy Silverado on Oct. On July 31, volunteers using sonar found the truck with Olivia inside submerged in a lake less than a mile from her home. What would that mean? It would mean she can come home. Savanna LaFontaine-Greywind, 22, was murdered in while eight months pregnant. Her body was found in a river, wrapped in plastic and duct tape. A neighbor in Fargo, North Dakota, cut her baby girl from her womb. The child survived and lives with her father. In a speech on the Senate floor last fall, North Dakota Democrat Heidi Heitkamp told the stories of four other Native American women from her state whose deaths were unsolved. It would also require the Department of Justice to develop a protocol to respond to cases of missing and murdered Native Americans and the federal government to provide an annual report on the numbers. At the end of , Native Americans and Alaska Natives made up 1. Native women accounted for more than 0. Lawmakers in a handful of states also are responding. In Montana, a legislative tribal relations committee has proposals for five bills to deal with missing persons. But Native females comprise only 3. On some reservations, Native American women are murdered at a rate more than 10 times the national average and more than half of Alaska Native and Native women have experienced sexual violence at some point, according to the U. A study found more than 80 percent of Native women experience violence in their lifetimes. Yet another federal report on violence against women included some startling anecdotes from tribal leaders. Canada has been wrestling with this issue for decades and recently extended a government inquiry that began in into missing and murdered indigenous women. A report by the Royal Canadian Mounted Police concluded that from to there were 1, indigenous women murdered or whose missing person cases were unresolved. Lucchesi, the researcher, says she found an additional to cases in her database work. Despite some high-profile cases in the U. For every Ashley, there are more. Nearly 40 percent of the residents live in poverty. The down-and-out loiter on corners. With just about 1, residents, many folks are related and secrets have a way of spilling out. They show a fresh-faced, grinning woman, flashing the peace sign. In one, she gazes into the camera, her long hair blowing in the wind. One of nine children, including half-siblings, Ashley had lived with her grandmother outside town. Kimberly remembers her sister as funny and feisty, the keeper of the family photo albums who always carried a camera. She learned to ride a horse before a bike and liked to whip up breakfasts of biscuits and gravy that could feed

an army. She was interested in environmental science and was completing her studies at Blackfeet Community College, with plans to attend the University of Montana. Kimberly says Ashley contacted her asking for money. Days later, she was gone. At first, her relatives say, tribal police suggested Ashley was old enough to take off on her own. The Bureau of Indian Affairs investigated, teaming up with reservation police, and interviewed 55 people and conducted 38 searches. The FBI took over the case in January after a lead steered investigators off the reservation and into another state. The agency declined comment. Theda New Breast, a founder of the Native Wellness Institute, has worked with Lucchesi to compile a list of missing and murdered women in the Blackfoot Confederacy — four tribes in the U. Long-forgotten names are added as families break generations of silence. A few months ago, a woman revealed her grandmother had been killed in the s by her husband and left in a shallow grave. I think that they find their voice. But if we would feel the full emotions, there would be people crying in the streets. Nearly 40 years have passed since that December day when her daughter, Monica, vanished. Wells remembers every terrible moment: He gently placed his palm on her name etched into a headstone. She still hopes to see the perpetrator caught. Why did you choose my daughter? Some 20 miles northwest of Browning, the searchers have navigated a rugged road lined with barren trees scorched from an old forest fire. They have a panoramic view of majestic snowcapped mountains. They wore T-shirts with an image of Ashley and the words: As drums throbbed, they grasped the edges of a blue blanket. Kimberly was 8 then; Ashley was just 5. And if she was going to go anywhere, I would find her. Sharon Cohen, a Chicago-based national writer, can be reached at scohen ap.

5: Americans Bulletin " Source for the UnCensored TRUTH!

It has carried out strikes during its nearly two years in office, compared to the strikes during the entire eight years of the Obama administration, according to a count by the AP and the Bureau of Investigative Journalism.

Paul Pioneer Press on Aug 2, at Smoke hangs in the air as emergency personnel work the scene of school building collapse at Minnehaha Academy in Minneapolis, Minnesota, U. Nine people were injured in the blast, which occurred about At least one person remained in critical condition Wednesday evening. Carlson remained missing throughout the day, but his body was recovered from the collapsed center section of the sprawling school building complex at 8 p. In announcing the discovery at a Wednesday night news conference, Minneapolis Fire Chief John Fruetel said that crews had suspended further operations at the scene until Thursday morning. No one else remained missing. Fruetel said the investigation into the cause of the blast, which was preceded by the announcement of a gas leak, was continuing. Sara Jacobson, executive director of institutional advancement at the school, said about a dozen students were in the gym and about 35 to 50 people were in the entire building complex on the campus, which overlooks the Mississippi River just south of the Lake Street-Marshall Avenue Bridge between Minneapolis and St. The nine injured were taken to Hennepin County Medical Center. By Wednesday evening, five had been discharged. Three were listed in satisfactory condition. Among the injured in the blast: Minnehaha Academy President Donna Harris, who returned to the scene hours later, leaning on others for help. Their blast-related injuries ranged from head trauma and broken bones to cuts and scrapes. We all feared for the worst when we first heard. Every day, the students would lead announcements and she would help them. Minneapolis records show the city issued a permit June 7 to Master Mechanical Inc. Teens who had been playing soccer in the field between were running, screaming, he said. Digging fast, he helped pull the man out and applied a tourniquet to stem his bleeding. He looked to have bad injuries to his head and legs. Minneapolis police officers Dean Milner and Vicki Karnik, reached the school within two minutes and found a mound of rubble with flames shooting out. They were able to dig out one man -- somewhat conscious and appearing in shock -- and heard from two others that a woman was deeper inside. Then she looked down at the basketball in her hand. I could see what was written on the board. It was weird," Rhoades said. She saw others stranded on a roof of a connected building. Firefighters confirmed that three people were rescued from the roof. The damage occurred in a central, older part of the school building complex, where ninth- through 12th-graders attend. All the cupboard doors were blown open," she said. She and several other neighbors praised the rapid response of fire and police crews. Employees of a food-services company were interviewing job candidates at the building Wednesday, said Alex Buck, the digital media director of Taher Inc. As school workers, students and neighbors gathered by the tennis courts in the northwest corner of campus, some Taher employees waited with tears in their eyes to learn the fate of co-workers. Audible relief went through their small group when facilities manager Don DuBois emerged from a cluster of ambulances, head wrapped in bandages, bloodstains smeared across his arms and shirt, grinning the grin of the unstoppable. The workers rushed to him and hugged, holding him tightly. And when he tried to pull away, some refused to let go. The upper campus houses grades , while elementary and middle school students are housed at the lower campus a few blocks farther south on West River Parkway. Students handed out Dilly Bars -- a Carlson favorite -- to anyone who wanted one. Gottfried contributed to this report.
