

## 1: World War I - Wikipedia

*One World One Way Many Paths: Uniting Cultures, One World Articles, Quotes, Cultural Intelligence Wisdom.*

Once heated, the natural shape of proteins and amino acids bend and twist into shapes the body cannot use. This super food also allows those with compromised digestive systems to fully assimilate the vital amino acids needed for repair and healing. Whey Isolates All body functions require amino acids and proteins in large quantities. By consuming Undenatured One World Whey you are feeding your body an amino acid and protein food naturally with no additives. The whey derived from the milk is processed in a manner to insure that little to no damage is done to the proteins. The result is a biologically active protein and amino acid food that feeds and nourishes every cell of your body. Protein isolates are more heavily processed powders in which the proteins are potentially damaged and many of the beneficial components of the whey have been removed. One World Whey concentrate has an extremely high biological value which means that the amino acid ratio is excellent for building muscle. Having 4 grams of fast-digesting natural non-GMO carbs as maltodextrin and dextrose is key for the protein ingested being absorbed and utilized by the body the most efficient way. Damaged amino acids, increases the need for white blood cells and enzymes to break down and eliminate these toxic substances and to deal with any excess acidity or inflammation these toxic substances create. Since enzymes, antioxidants and white blood cells are made from amino acids, this increases our need for a generous supply of useable amino acids. The most easily digested and quickest way to raise amino acid levels in the blood is with unheated, undamaged whey protein powder. Thus, the number one protein to supplement your diet with is whey. It supports the creation and maintenance of great health. Toxicity is at the root of all disease. If you want to heal, you must start with detoxifying your entire body. Heavy metal toxicity is one of the main reasons we degenerate with age. Heavy metals, such as mercury, lodge in our cell structures. Secondary sources are fish and atmospheric mercury from coal-fired power plants. Metabolic wastes then begin to accumulate, which causes cellular aging and disease. This damages proteins, rendering the whey useless and even harmful to the body. Results of this study also showed whey protein acted as a protective defense against oxidant-induced cell death. Whey protein powder is the most valuable supplement you can add to your diet, especially when battling illness. Cold Processed Whey contains the following: Binds to fat-soluble vitamins, making them bio-available. Helps lower high blood pressure. Immunoglobins will entrap micro-organisms for elimination. The function of your liver plays a role in producing the gamma globulins needed for your own immune system. More Incredible Health Properties of Lactoferrin: Lactoferrin activates very specific strands of DNA that turn on the genes that launch your immune response. No other protein has yet to be found like it. Helps infants establish good microbial conditions in the intestines. Regulates iron absorption and bioavailability. In one study it was found that lactoferrin inhibited proliferation of the human epithelial cancer cell line HeLa. Richards, Board Certified Clinical Nutritionist.

## 2: One World Whey - New Improved Whey Protein Formula.

*One World One Way, O.W.O.W. Foundation, Inc. is a Georgia Domestic Non-Profit Corporation filed on December 12, The company's filing status is listed as Active/Owes Current Year Ar and its File Number is*
