Google The small businesses landscape in the United States has experienced many changes during the past few decades. Thanks to advancements in technology it has become easier for people to create and run businesses without insurmountable operating expenses. This has led to small business growth nationwide and changes in the way in which businesses operate. Below is a discussion of the small business landscape that includes key statistics, facts and trends that small business owners should anticipate in the coming year. Small Businesses in America: These small business statistics suggest that mom and pops, start-ups and home-based businesses account for a significant portion of the commerce that takes place in the U. This growth is occurring at an impressive rate as more than , new businesses are being started each month. This trend favors small business growth as more employee businesses shut down than start up each month. Mobile Commerce is Exploding In order to facilitate growth, it is expected that small businesses will exhibit certain trends in the way they operate in People are purchasing items via mobile devices at a rate that continues to trend upward. Sales statistics revealed that 69 percent of tablet users and 45 percent of smartphone users made mobile purchases this past holiday season. These statistics suggest that mobile commerce is too large of an opportunity for small businesses to ignore in The Next Big Thing? Social media has become a critical tool for businesses as the average U. Small business owners will be drawn to these social channels as they seek to access their target markets in the digital space. Expect social media to continue to develop into an integral marketing strategy for small businesses. This means that many small business owners are hosting their operations from the comfort of their own homes rather than taking on the additional costs associated with physical business locations. Currently more than 16 million people work from home in the United States, a figure that is expected to continue growing in Social collaboration tools and communication apps present an opportunity to conduct business from home, generating predictions that suggest the number of people working from home in the U. Outsourcing The trend toward working from home and the popularity of nonemployee business means that online outsourcing is becoming more common. It is anticipated that 1. This means that there will be a large pool of available home-based laborers for businesses that look to avoid health care costs and large salaries. Contract and pay-as you go arrangements are viable options for small businesses. More Crowdfunding The ever-increasing number of start-ups that are created each month will need funding in This demand outweighs the capabilities of credit institutions to support new business. It is for this reason that crowdfunding services are becoming increasingly popular with small business owners. These services make it possible for small businesses to access potential contributors for their business endeavors. This is a statistic that is expected to rise in as crowdfunding services become more specialized and small businesses begin to recognize their potential. The weight that small businesses carry in the U. These previous trends and improving technologies suggest that small businesses will continue to adapt and grow in This led me to an article focusing on micro-businesses which entails employees. From to , U. This reminded me of the ant analogy. Ants are super strong for their size. The key takeaway from this article is that with high quality education, micro-businesses could grow and flourish much faster than medium and large businesses. Of course this is all hypothetical, but the potential is much greater and realistic for micro-businesses because of how quick they can move compared to larger businesses. This business is keeping up to date with social media, internet marketing, and branding trends. But is there a faster way to evolve? Can We Move Faster? Most web or mobile applications are businesses based on fads, lasting years on average. A custom made table lasts for generations. The current model is saturated with churn-and-burn tech startups neglecting the value of investing time and resources to create products that last. This is a fundamental reason for skewed small business statistics, along with connotations. Do you consider a business small if they have 3 employees but make millions?

The Executive Order consolidated the functions of the Office of Facts and Figures (OWI's direct predecessor), the Office of Government Reports, and the Division of Information of the Office for Emergency Management.

Origins[edit] President Franklin D. One American observer noted: The American public, and the United States Congress in particular, were wary of propaganda for several reasons. First, the press feared a centralized agency as the sole distributor of wartime information. Radio repair service in the self-help exchange. The VOA initially borrowed transmitters from the commercial networks. Servicing a Douglas A Havoc bomber. Japanese Relocation and several other films were designed[by whom? The OWI also worked with camp newspapers to disseminate information to internees. These newsreels incorporated U. For examples see this Google list. For example, in Japan, the OWI printed and dropped over million leaflets, with about 98 million being dropped in the summer months of Magazines distributed to foreign audiences, such as Victory, intended to convey to foreign Allied civilians that American civilians were contributing to the war. The packets of seeds had an American flag and a message printed on the outside that identified the donor. Soap paper was etched with the message: Dip in water - use like soap. In reply, the Filipinos threw their entire resources and manpower into the struggle on the side of the United States. They spoke of Nazi commanders hiding their desperate position from the German public, which caused dissent among Nazi supporters. Further, they led Nazi forces into an Allied trap, and then staged an Allied attack on the Annie Radio office to maintain their cover. However, Poles considered much of the land of the Eastern front as their own. The OWI struggled to present the news including the pronunciation of town names or and discussion of county or national boundaries without offending either party. OWI also created communication channels logistical support for intelligence and coded information. In India, the Americans and British agreed to win the war first, then deal with de colonization. But this approach angered Indians as well as the African-American lobby at home who recognized the hypocrisy in American policy. Congressional opposition to the domestic operations of the OWI resulted in increasingly curtailed funds. Many overseas branch offices were closed, as well as the Motion Picture Bureau. By the OWI operated mostly in the foreign field, contributing to undermining enemy morale. The agency was abolished in , and many of its foreign functions were transferred to the Department of State. Flora Wovschin , who worked for the OWI from September to February , was later revealed in the Venona project intercepts to have been a Soviet spy.

Facts & Figures This is the 38th edition of UAB's Facts & Figures and the 20th edition available electronically. This factbook is compiled by the Office of Institutional Effectiveness and Analysis but reflects contributions from offices all over campus.

This figure could even increase to almost one million by This shortage is caused by lack of relevant e-skills. Many of these potential vacancies are likely to remain unfilled unless more is done to attract young people into ICT education, and to retrain unemployed people. These are some of the key results from the continuous monitoring of the supply and demand of e-skills across Europe and the benchmarking of national policy initiatives and multi-stakeholder partnerships in the EU released today. The good news is that policy activity in relation to e-skills has significantly increased at national level over the past five years. However, there are sharp differences between countries" says Werner B. Korte, director of Empirica, the company which has been contracted by the Commission to carry out the research. The authors also expect the trend towards higher-level skills in ICT jobs to continue. Consequently, the study claims that there is a corresponding need to increase the quality and relevance of e-skills available in the labour market, particularly since the supply of university graduates is not keeping pace. The significant growth in highly skilled jobs, such as management, architecture and analytics positions, reinforces the need for what has been termed "e-Leadership skills", a combination of technical, business and leadership skills and competences. Since these positions are usually filled by recruits from a pool of seasoned practitioners and other non-ICT managers, the study anticipates recruitment bottlenecks over time. New jobs are likely to be created in all industry sectors, and beyond the traditional pathway of ICT studies, but with a strong imperative for ICT to permeate other and new educational trajectories. There is a great need today for new education approaches, new modes of delivery, better curricula and learning outcomes to fill this gap. Governments in Europe are increasing their efforts to address the skill shortage through dedicated policies, initiatives and partnerships, although most countries still lack a strategy, or continuity across the policy areas concerned. Of the then Member States, 12 show a value of 3 or higher on the 5-point index scale for e-skills activity. The leading countries, the UK, Ireland, Belgium, Germany, Denmark, France, Malta, the Netherlands and Sweden, also perform strongly in activity for ensuring adequate supplies of ICT practitioners on the labour market today and in the future. The degree of integration and consistency of policy-making is still limited in many Member States, where there is no master strategy or no continuous attention across policy areas. It is striking that countries with significant activity in the e-skills domain also have the highest share of ICT workers in their workforce, and rank highest on innovation and competitiveness indices such as the Networked Readiness Index NRI , which measures the capacities of economies to leverage ICT for increased competitiveness and development. Some countries which could be described as latecomers have become more active recently. Lithuania and Poland have started e-skills programmes as national Grand Coalitions for Digital Jobs, as part of the Commission initiative with the same name. Ten further Member States, mainly from Southern and Eastern Europe, are also planning to launch national programmes.
