Bike Racks , Park Benches , Picnic Tables , Bleachers , Planters , Trash Receptacles and more The Park and Facilities Catalog is a leading manufacturer and supplier of commercial site furnishings to parks, schools, shopping centers, multi-family communities, HOAs and office buildings since We offer thousands of diverse, commercial-grade products including park benches, bicycle racks, bleachers, picnic tables, trash receptacles, commercial planters, dog park equipment, park grills and so much more. My representative, Carrie has gone above and beyond to accommodate any request I have made and service has always been prompt and courteous. Suffern, NY Thank you for following up in regards to the purchasing of several pieces of equipment from the Park and Facilities Catalog. I have been dealing with Michael and he has been fantastic. Atoka, TN I just wanted to thank you and your company for all your help on the tables and chairs we purchased! They are very durable and really brighten up our outside covered area! We have received a lot of compliments on how nice they are and we will definitely keep you guys in mind in the future. Everett, WA I ordered 10 picnic tables in the spring and we love them. All the parts were there, nothing was damaged in transit, easy to put together and it looks beautiful. Thanks - Ron R. La Palma, CA Kudos to your company! Your customer service is second to none and quite refreshing in this day and age of self-service shopping! We are very pleased with the look and quality. You were most helpful with advice. I appreciate you working with me on this project. I am very fortunate to do business with a reputable company. So far, no issues and our customer seems to be happy with them. Thanks for the follow-up, that quote should now be a completed order. It shows how professional your company is and frankly how lucky they are to have you working with them for the overall satisfaction of the customer. You are a real professional, and I appreciate your customer service skills! A very happy customer. You have been wonderful. Our Club members have actually commented on how nice our new umbrellas are.

YMCA-USA Camping Update. "Like a College Degree in Camp Property Management" - Historic YMCA Camp Dudley's Fred Guffey writes: "I've found the book Outdoor Site and Facility Management to be of great use.

Outdoor Services provides snow removal and ice-control services. The university has owned these ditch rights since Irrigation is conducted at night and is based on information gathered from an on-campus weather station. Sometimes day-time watering occurs, usually due to new sod or system testing. How to Request Service To report concerns about sprinklers or irrigation: The grounds crew is primarily focused on maintenance activities. New project installations must be approved by the campus landscape architect. Due to a limited budget, some requested projects may require requestor funding. How to Request Service To report concerns about campus landscaping: If you have been in an accident please contact the University Police Department at Campus Closures In extreme situations the members of the Snow Removal committee in collaboration with the University Police Chief, may recommend a campus closure. The final decision to close campus is made by the Chancellor. When possible, this decision is announced prior to 5: For recorded information regarding potential campus closures, please call ,or visit Campus Closures Safety Resources City of Boulder Snow Dispatch: Departmental Roles Facilities Management Facilities Management provides leadership and coordinates campus snow removal efforts. Within Facilities Management, the Outdoor Services and Environmental Services divisions carry the main responsibility for snow removal and ice abatement. The Trade Shops provide additional support for major snow events. Facilities Management is responsible for snow removal and ice abatement from all general fund areas on both Main and East campus. These areas include most campus streets, sidewalks and building entries. The Outdoor Services division provides all of the equipment operators and performs about half of the shoveling during the day. The Environmental Services division provides about half of the hand shoveling during the day and all of the night time shoveling. In addition, Outdoor Services provides snow removal and ice abatement for Research Park and Grandview Terrace under separate service agreements. Comments or questions can be sent via e-mail to Donald. Snow removal is performed with its own resources, support from Facilities Management, and private vendors. Comments or questions can be sent via e-mail to Shauna. Facilities Management provides snow removal services as requested for scheduled events at the Coors Events Center. Housing and Dining Services Housing Maintenance is responsible for snow removal and ice abatement from the sidewalks, parking lots, loading docks and some streets within Residence hall and Family Housing areas. Comments or questions can be sent via e-mail to Fernando. Risk Management University Risk Management actively participates in the campus snow removal committee, including loss prevention consultation, ergonomics and related training, claims management, and accident investigation. University Risk Management Emergency Management The Emergency Management Division will provide support and coordination to other campus departments during significant or extreme winter weather events. Emergency Management assists with public information, resource support, situational awareness, and coordination with campus partners, such as the city of Boulder. For information, please visit EmergencyManagement or email Stuart. Accessibility Issues The campus recognizes its responsibility to insure accessibility to persons who have special accommodation needs. Disability Services front office number is or email dsinfo colorado. Each semester a meeting is held to identify the routes of travel used by those with special mobility needs. Outdoor Services will make every possible effort to accommodate your needs. If you experience a specific problem, call the Facilities Management Service Center at and a staff member will be dispatched to address the situation promptly. Equipment and Materials Outdoor Services utilizes a variety of equipment for snow removal including plows, skid-steers, front end loader, blowers, material spreaders, liquid anti-icing spray applicators and sweepers for post storm cleanup. These materials are applied to asphalt and concrete surfaces to prevent or reduce the buildup of snow and ice. In an effort to minimize the negative impact on air quality, the amount of sand being used on campus has been reduced. Calcium chloride and Ice Slicer is used at building entries by campus hand shoveling teams. How to Request Service.

Outdoor Site and Facility Management: Tools for Creating Memorable Places is a comprehensive resource for staff, board members, management, and owners charged with the complex and challenging task of managing and maintaining properties. The book offers a step-by-step property management plan that will help you to provide the safe environment.

Historically, Virginia license sales and participation in traditional hunting, fishing, and trapping activities have mirrored national trends. If Virginia continues to follow its previous pattern of mirroring the national trend, then it is fair to speculate that the Commonwealth will experience a decline in some state-issued license sales and grant-based monies collected as federal excise taxes on hunting and fishing related equipment, while, at the same time, interest and participation in non-traditional wildlife-related activities will grow. As some activity-based funding resources are projected to shrink or increase only modestly, the DGIF can expect demand for public access to water resources will increase, due, in part, to growing sales of recreational boats in Virginia. Sales of non-powered watercraft are difficult to quantify, yet numerous examples exist. At the same time, a new, non-traditional, and growing constituency of users is bringing additional, and sometimes conflicting, management challenges to the agency as they seek use of BA sites. As a result, the ability of the agency to fulfill existing maintenance needs, while also trying to accommodate demands and expectations of new BA site users, presents unique issues. Clearly, the DGIF should not expect less need for BA site maintenance, but rather should anticipate a concurrent, and likely increasing, need for an adaptive management response. Key scoping tasks of the study were to: Data collected from this study from interactions with boating access users, as well as DGIF staff, administrators, and Conservation Police Officers, identify several challenges associated with BAP administration. Need exists to formalize policy that clarifies acceptable use of BA sites for the public, but also for agency personnel so that, when staff communicates with the public, it does so with one voice. The lack of consistent policies that outline permitted on-site uses of and activities at BA facilities, as well as no formal policy for the acquisition and closure of BA properties, makes uniform execution of the BAP difficult. Although a substantial proportion of BA users already pay through existing mechanisms, opportunity exists for the public to further connect their water-based outdoor BA activities with the agency through voluntary funding programs and collaborative partnerships. It became abundantly clear from focus group discussions and open-ended survey questions that members of the general public do not know much about the DGIF – what it does, what its responsibilities are, how it is funded, or how it differs from other state entities. This illustrates a significant need to improve communication and raise awareness among citizens about DGIF, particularly how it is funded and operates. At the same time, many BA users knew little about the limited BA maintenance staff nor the finite funding and other constraints that affect BA operations in Virginia. After learning about these limitations, participants became more understanding of the challenges DGIF faces in managing BA sites. In fact, following that realization, participants eagerly offered ideas and suggestions about ways DGIF could collaborate with municipalities, boating clubs, land trusts, conservation organizations, and businesses to help address financial and personnel resource gaps. It was evident from these interactions with BA users that they value collaborative approaches and view cooperative or supporting partnerships among communities, municipalities, and agencies as acceptable strategies to meet existing needs of BA users across the Commonwealth. Attempts to address or resolve an identified issue in isolation from the full context within which that issue exists likely will not produce meaningful and desired outcomes. Therefore, this highlights the need to develop clear agency operational and management policy that then is communicated in clear terms both internally to agency staff and externally to the BA public. Given that, many of the proposed goals and objectives presented in this draft plan focus on establishing the necessary guidance framework and foundation and implementing actions that provide consistent administrative and operational follow-through on the most pressing needs identified during this study. A complete and detailed presentation of objectives and strategies is provided in Chapter 3 of this document. Overarching Principles Water access: Goal Statements Goal 1:
