Oxford English Dictionary (OED) June update Tennis words amongst those to be added to the Oxford English Dictionary -- 27 th June, Oxford, UK -- Today the Oxford English Dictionary (OED) announces its latest update, which includes a batch of tennis-related words, as well as a tranche of other additions from the lifestyle, current affairs.

I was honoured to be invited to offer my expertise on the tennis-themed words to be included in the Oxford English Dictionary. Superbrat is also a word which is used in contexts other than tennis, but was famously applied to the tennis player John McEnroe by the British press in response to outbursts on court. Playing terms such as forced error and chip and charge are included in this update. The latter is a term for an attacking style of play, in which the player approaches the net behind a sliced shot. Other styles added include the aggressive power tennis and the more composed percentage tennis. The game has also inspired descriptions for types of parents whose children play tennis. Interestingly, the spelling tennis mum started life in the s with an alternative sense, referring to a woman who has returned to playing tennis after becoming a mother. Tennis scores themselves have an interesting history. Other tennis words and terms: What else is new to the OED? In , Oxford Dictionaries announced post-truth as its Word of the Year. Since then, the huge increase in usage of the word has given the lexicographers enough evidence to add it to the OED. Adding to the educational theme is the acronym for massive open online course, MOOC. Often displaying a playful side to the English language, colloquialisms and slang words have always had their place in the OED. Who knew there were so many different types of wedding veils? Birdcage veil, blusher veil, cathedral veil, and fingertip veil have all been added. The OED is an unsurpassed guide to the meaning, history, and pronunciation of over , words, senses, and compounds “ past and present “ from across the English-speaking world. As a historical dictionary, the OED is very different from those of current English, in which the focus is on present-day meanings. The exact time-span and number of examples may vary: We also look for the word to reach a level of general currency where it is unselfconsciously used with the expectation of being understood: We have a large range of words under constant review, and as items are assessed for inclusion in the dictionary, words which have not yet accumulated enough evidence are kept on file, so that we can refer back to them if further evidence comes to light.

We often think of metaphors as something unusual and poetic, challenging us to look at things in a different way, and literary metaphors may do just that. Everyday metaphors and idioms on the other hand, may do the opposite. New idioms catch on because they fit into the way we already view the world. The language of sport is a very fertile source of idioms. We love to view life, business or politics in terms of a game or contest. For Americans, the national sport above all others is baseball. Wheelhouse has spread from its literal meaning in sailing to idiomatic uses in both baseball and life: And if things get really serious, you may even find that life has stopped being a game and become a battlefield. If you are lucky you will manage to dodge a bullet but there is always a risk that innocent people will get caught in the cross hairs. A conceptual metaphor that we can apply to language itself is the survival of the fittest. Words and expressions must adapt or die. There are many examples of idioms that have outlived their literal meanings. Some recent idioms reference items that are already old-fashioned or obsolete. Others have extended their use by changing their form. Some people keep repeating the same thing over and over in a way that is very annoying like a broken record but who actually listens to records any more? The UK and Ireland decimalized their currencies in A long time ago people used to wear hats in all weathers and to take your hat off to somebody was a sign of respect. The expression I take my hat off to you survived even when it became a metaphorical hat, not a literal one. Other new idioms reflect the activities and concerns of the time. During the elections for Mayor of London there was much discussion of dog whistle politics. The term can be applied to a political message that is only intended for and heard by a particular group of people. He made use of the dog whistle on issues like immigration and crime. And President Obama popularized the mic drop. This is the act of deliberately dropping your microphone at the end of a performance or speech that you think you did particularly well. The US now has a new president and we may be entering a new era of fake news , post-truth and extreme vetting three of the most recent items to be added in this update. Is this the new normal? If there is no word for the precise idea you want to convey, you can use your creativity and make one up. Metaphors are an easy way to do this, because of the extent to which we already view the world in metaphors. If other people recognize the concept behind your new expression, they may start using it too. Finally, and on a completely unrelated note: Do you notice a trend in these new informal adjectives connected with computing? Which is the odd one out?

The Oxford Dictionaries Word of the Year is youthquake. The noun, youthquake, is defined as 'a significant cultural, political, or social change arising from the actions or influence of young people'.

More than one thousand new words have been added, including terms from recent advances in science, borrowings from foreign languages, and words from tech, medicine, pop culture, sports, and everything in between. This is a significant addition to our online dictionary, reflecting the breadth of English vocabulary and the speed with which we seek information. These new entries also highlight the old-fashioned skill of crafting useful and readable definitions that require the expertise and experience of our unique staff. The work of revision is ongoing and constant; even though it seems that the latest slang gets the most attention when dictionaries issue lists of new words, the additions come from the whole range of registers and from every corner of the language. These are words that have demonstrated frequent and increasing use in a variety of sources, and are therefore likely to be encountered by a reader—and should be in the dictionary. In some cases, terms have been observed for years and are finally being added; in others, the fast rise and broad acceptance of a term has made for a quicker journey. For example, we now see that new tech terms are more about what we do with technology—how it is managed, deployed, and organized—than giving a name to the technology itself; hence terms such as net neutrality, abandonware, and botnet. Our devices, apps, and programs allow us to binge-watch, photobomb, and ghost someone. Things we read online might be NSFW listicles; things we post online might be humblebrags. Some of these terms came into use in the past decade, and none are more than twenty years old. From sports we get the verb airball as well as up-fake and five-hole. Prosopagnosia, sometimes called "face blindness," is a neurological condition that has only relatively recently been the subject of study. The late neuroscientist Oliver Sacks, who suffered from the condition, wrote illuminatingly about its causes and effects. The adjective artisanal now has an expanded entry. Its origins have a political context: Familiar words combine to give us metaphors or imagery like train wreck, side-eye, and weak sauce. As for verbs, we can ride shotgun, walk back an opinion, throw shade, face-palm, and geek out with new dictionary entries. Other new compound terms are much more serious, like food insecure. All of these words have been observed, collected, and researched, with many examples in context used to write definitions that explain both basic meanings and specific usage. Take a look at these words and a sampling of other new entries, listed below.
