

1: Association for Laboratory Phonology - Wikipedia

Papers in Laboratory Phonology V: Acquisition and the Lexicon will thus be of interest to a wide range of researchers in phonetics, phonology, psycholinguistics, cognitive science, and the study of speech and communication disorders.

Edited by William J. Hardcastle and John Laver. Palgrave Macmillan Press, , pp. The Role of Perceptual Contrast. Evolution and Current Practice. Edited by Valerie Becker Makkai. Edited by John A. Edited by Gina Garding and Mimu Tsujimura. Hinskens, Frans, and Jeroen van de Weijer. Mouton de Gruyter, The Emergence of Distinctive Features. Ohio State University dissertation, Oxford University Press, Peperkamp, Sharon, Katrin Skoruppa, and Emmanuel Dupoux. Cascadilla Press, , pp. Pisoni, and Steven D. Psycholinguistic and Computational Perspectives. Evidence from Modern Standard Arabic. Edited by David Pisoni and Robert Remez. Conceptual and Empirical Knowledge. Word Frequency, Lenition, and Contrast. Edited by Joan L. Bybee and Paul Hopper. John Benjamins Publishing Company, Edited by Jaques Durand and Bernard Laks. Dumay, Nicolas, Uli H. Frauenfelder, and Alain Content. Size of Attentional Focus in French. Frauenfelder, and Ruth Kearns. McMurray, Bob, Michael K. Tannenhaus, and Richard N. Cascadilla Proceedings Project, , pp Evidence for Lexical Competition. Feedback is Never Necessary. Implications for Research and Theory. Edited by Morton Ann Gernsbacher. The Groundwork of Cognition. Cambridge University Press, Human Perception and Performance 21 Perrier, and Jean-Pierre Orliaguet. Human Perception and Performance 27, no. This is one of over 2, courses on OCW. Find materials for this course in the pages linked along the left. No enrollment or registration. Freely browse and use OCW materials at your own pace. Knowledge is your reward. Use OCW to guide your own life-long learning, or to teach others. Download files for later. Send to friends and colleagues. Modify, remix, and reuse just remember to cite OCW as the source.

2: Laboratory Phonology: Journal of the Association for Laboratory Phonology

The nineteen papers and four commentaries in this volume make a substantial contribution to the field of laboratory phonology. One way Broe and Pierrehumbert incorporate the cutting edge nature of laboratory phonology into this volume is through the selection of acquisition and lexical representation as two special themes.

Tue, 07 Aug Acquisition and the Lexicon. Please note the original announcement of the book, which gives a list of the contents: The papers in this collection were originally presented at the 5th conference on Laboratory Phonology at Northwestern University in The motivation for such a series was to bring phonetics and phonology closer together, primarily, I believe, by testing current phonological theories with real phonetic data. The current collection of papers, again like most of its predecessors, presents work in several sub-areas of phonetics-phonology research. This is particularly stimulating, since the potential reader may be relatively familiar with the research in one subset of papers, while another set of papers presents research with which the same reader has at best a passing acquaintance. The present collection of papers is divided into three sections: I am personally least familiar with the work presented in "Acquisition and Lexical Representation" Section III, and hence will only make a brief comment below on one particular result that struck me, and which seemed to me typical of most of the results presented in this section. The other two sections, "Articulation and Mental Representations" and "Tone and Intonation" present important work in their own sub-areas indeed, I have seen papers from the first section "Articulation and Mental Representations" cited in journal papers for years now, since the papers in this series often circulate in draft form well before publication date - see gripes regarding publication date below. The fact that the LP approach has expanded to include other sub-areas of phonetics-phonology, such as those represented in sections I and III here, is indicative of the need felt by many researchers in phonetics and phonology for more explanatory power in their work. Since the individual papers in this book cover such different topics within phonetics-phonology, I will not attempt to provide a summary of all the papers, nor even of a substantial part of the papers. I will simply make some brief "potted" observations on results and trends that struck me as I read through the chapters in the book. Perhaps the most pleasantly surprising feature of the volume is the incredible variety of methodological approaches presented in the first section "Articulation and Mental Representations". I found the paper by Harrington et al. By lowering the jaw, overall energy is increased, whereas by raising or fronting the tongue, the vowel becomes more peripheral. The authors mention the acoustic data only in passing there are no tables or figures, so it is not clear a whether a potentially higher F1 due to a lower jaw is compensated for by a higher tongue position, and b how the increased energy due to the lower jaw is compromised by the higher tongue position although it appears that overall energy is increased. One aspect of the current volume that is particularly pleasing is the quality of the commentaries. It is a feature of the LP series that each section or sub-section of papers is followed by a commentary, written by a respected researcher in the field. The commentator usually attempts to identify common themes in the papers, and usually makes some pertinent criticisms. In the present collection, I found that the commentaries were a significant work in themselves. The commentary by John Coleman entitled "Where is coarticulation? His criticisms on p. Coleman suggests that the empirical results presented do not favour the Task Dynamic model over any other model of speech, and that hence much of the confusing terminology associated with this model involving radians, for example should be replaced by more readily understandable terms such as seconds. For the Coleman commentary as well as the other commentaries, the work that must have gone into understanding the papers presented is impressive. I will finally mention one result in the section "Acquisition and Lexical Representation" that I found particularly interesting as a non-psycholinguist. They found that this sensitivity to syllable frequency was already present in some children in the second year of schooling. Although there was an overall preference for speakers to leave the syllable rime intact, it was much more likely, particular early on in the task, for an infrequent, phonotactically permissible syllable to have its rime split up, than for a frequent, phonotactically permissible syllable to have its rime split up. The results in the Treiman et al. One quibble I have with the LP series is that the papers are presented without an accompanying abstract. Whilst some authors are good at organizing their papers so that it

is easy for the reader to re- find the important results, it is by no means true that all authors have this talent. It would be useful if future collections included abstracts for each paper, in order to make it easier for readers to summarize results when writing their own papers or book reviews! I have only one severe criticism of this collection and have left it till last, since by putting it first I would have implied that the quality of the collection suffered as a consequence of this fault not so , and by putting it elsewhere in the review, I would have implied that the criticism was unimportant also not true. My criticism is the following: The conference at which these papers were first presented took place in , yet the official publication date of the present volume is most libraries and individuals would, of course, only receive the book in There can be no doubt that putting together a collection of papers such as this is a complicated process: Her research interests include acoustic and articulatory phonetics, cross-linguistic phonetics and phonology, coarticulation, articulatory prosody and Australian languages. She is currently a postdoctoral research fellow at the Institut de la Communication Parlee in Grenoble, France.

Intermediate properties in the perception of distinctive feature values John Kingston and Randy L. A double weak view of trading relations: Speech perception and lexical representations: Ohala and Manjari Ohala; 5. On the status of redundant features: The perceptual basis of some sound patterns John J. Esther Grabe and Paul Warren; 9. Perceptual evidence for the mora in Japanese Haruo Kubozono; On blending and the mora: Toward a theory of phonological and phonetic timing: On phonetic evidence for the phonological mora: Prosodic patterns in the coordination of vowel and consonant gestures Caroline L. Asymmetrical prosodic effects on the laryngeal gesture in Korean Sun-Ah Jun; On a gestural account of lenis stop voicing in Korean: An acoustic and electropalatographic study of lexical and postlexical palatalization in American English Elizabeth C. What do we do when phonology is powerful enough to imitate phonetics: The influence of syntactic structure on [s] to [ʃ] assimilation Tara Holst and Francis Nolan; Assimilation as gestural overlap: Orals, gutturals and the jaw Sook-Hang Lee; The role of the jaw - active or passive?: The phonetics and phonology of glottalized consonants in Lendu Didier Demolin; Lendu consonants and the role of overlapping gestures in sound change: Reviews "LP allows methodology in related sciences; including acoustics, psychology, information science and life sciences, and is becoming a powerful tool in shaping our knowledge of the structure of sound systems.

5: Laboratory Phonology 10 | Download eBook PDF/EPUB

This volume extends the traditional focus of this series on the phonology-phonetics interface with papers exploring the contribution of various types of empirical data—including acoustic, articulatory, and perceptual—to the principal themes embodied in the questions of what constitutes a possible word and what underlies the human capability to produce language.

A LabPhon bibliography A. Papers in Laboratory Phonology Note. In this part I have indexed each paper by volume, chapter number and pages. Commentaries are given the same chapter number as the paper upon which they comment, except in those volumes where commentary papers were given their own chapter number. John Kingston and Mary E. Between the Grammar and Physics of Speech. Beckman and John Kingston. Sharon Inkelas and William R. Where phonology and phonetics intersect: Metrical representation of pitch register. The status of register in intonation theory: Silverman and Janet B. The timing of prenuclear high accents in English. Alignment and composition of tonal accents: Macro and micro F0 in the synthesis of intonation. The separation of prosodies: Beckman and Jan Edwards. Lengthenings and shortenings and the nature of prosodic constituency. On the nature of prosodic constituency: Lengthenings and the nature of prosodic constituency: From performance to phonology: The Delta programming language: The phonetics and phonology of aspects of assimilation. On the value of reductionism and formal explicitness in phonological models: The role of the sonority cycle in core syllabification. Demisyllables as sets of features: Browman and Louis Goldstein. Tiers in articulatory phonology, with some implications for casual speech. Toward a model of articulatory control: On dividing phonetics and phonology: The generality of articulatory binding: The window model of coarticulation: Some factors influencing the precision required for articulatory targets: Some regularities in speech are not consequences of formal rules: An introduction to task dynamics. Comments on "Targetless" schwa: Beckman, Jan Edwards and Janet Fletcher. Prosodic structure and tempo in a sonority model of articulatory dynamics. The Association for Laboratory Phonology is a non-profit professional society for researchers interested in the sound structure of language. It was founded to promote the scientific study of all aspects of phonetics and phonology of oral and sign languages through scholarly exchange across disciplines and through the use of a hybrid methodology.
