Reading and Writing for Understanding The integration of reading and writing strategies helps students to make the leap from knowing to understanding By: Helping students make that leap “ from knowing to understanding “ represents the very heart of the educational enterprise. Reading to Learn Jacobs explains that students learn and practice beginning reading skills through about the third grade, building their knowledge about language and letter-sound relationships and developing fluency in their reading. They need to comprehend what they read through a three-stage meaning-making process. During the prereading stage, teachers prepare students for their encounter with the text. They help students organize the background knowledge and experience they will use to solve the mystery of the text. To do so, they must understand the cultural and language-based contexts students bring to their reading, their previous successes or failures with the content, and general ability to read a particular kind of text. Asking such questions as, "What do I already know and what do I need to know before reading? Guided Reading Students move on to guided reading, during which they familiarize themselves with the surface meaning of the text and then probe it for deeper meaning. Effective guided-reading activities allow students to apply their background knowledge and experience to the "new. Common guided-reading activities include response journals and collaborative work on open-ended problems. During guided reading, Jacobs recommends that teachers transform the factual questions that typically appear at the end of a chapter into questions that ask how or why the facts are important. As with prereading, guided-reading activities not only enhance comprehension but also promote vocabulary knowledge and study skills. Postreading During postreading, students test their understanding of the text by comparing it with that of their classmates. In doing so, they help one another revise and strengthen their arguments while reflecting and improving on their own. Writing allows students to organize their thoughts and provides a means by which students can form and extend their thinking, thus deepening understanding. Like reading-to-learn, writing can be a meaning-making process. This process allows students to define and test what they would like to write before drafting. To help students prepare their arguments, teachers guide them through the three stages of writing-based inquiry: Stating specific, relevant details from personal experience; Proposing observations or interpretations of the text; and Testing these assertions by predicting and countering potential opposing arguments. Through inquiry, students discover and refine something worth writing about. Writing-to-learn activities can include freewriting writing, without editing, what comes to mind , narrative writing drawing on personal experience , response writing writing thoughts on a specific issue ; loop writing writing on one idea from different perspectives and dialogue writing for example, with an author or a character. Students engaged in reading-to-learn will also be prepared to write well. In turn, students who are engaged in writing-to-learn will become more effective readers. Through both approaches, students will gain a better understanding of material and a greater ability to demonstrate that understanding. Staff Development Jacobs recommends that teachers who are considering whether to implement reading-to-learn and writing-to-learn strategies into their classroom first define their own instructional goals.

Church History Historical Comments No episode in the history of Christianity and science is better known than the Scopes trial. In the swelteringly hot summer of 1925, a rookie teacher named John Scopes was prosecuted for teaching evolution in the small town of Dayton, Tennessee. Fittingly, by far the most famous moment of the trial did not involve Scopes at all; nor did it take place in the courtroom. No scientific idea has been more controversial among Christians than evolution, and no one hated it more than Bryan. The recipient was Charles G. Courtney of Edward B. Incarnational Faith At that time, with tens of millions of American Protestants caught up in bitterly divisive denominational battles over the Bible and modern knowledge, middle ground on evolution was mighty hard to find. I take it that religion is based on the idea of a Divine Mind revealing himself to intelligent creatures for moral ends. Although Gray apparently had no prominent theological descendants in the Scopes era, they are more numerous today. The Intertwining of Science and Religion, p. But speaking exactly to the points I outlined for you in my previous two columns, Polkinghorne holds that The consonantist, on the other hand, while wishing to ensure that theological understanding is consistent with what science tells us about the structure and history of the physical world, will insist that theology is as entitled as science to retain those categories which its experience has demanded that it shall use, however counterintuitive they might be. Jesus Christ will continue to be understood in the incarnational terms. Belief in God in an Age of Science, p. Chicago was the hotbed of modernism, and it graduated a large number of doctoral students, who then went and taught at other seminaries or occupied prominent pulpits. It undermined habits of thought and substituted the tentativeness of experiment for authoritative formulas [i. It was only when educational processes had ceased to be controlled by the study of classical literature and grew more contemporary, that orthodox theology was felt to be incompatible with intellectual integrity. Historical and Contemporary Issues, p. Overcoming the Conflicts, p. If the disciples had brought a video camera into the upper room, it would not have captured an image of the risen Christâ€”the camera lacked faith, apparently, and therefore it could not see. This is one of several reasons why Theistic Evolution is so unpopular among traditional Christians: However, they need to try more trees before carrying out the induction. My approach will be identical to that taken in every other part of the series. Please join us, and in the meantime join in our final conversation about Theistic Evolution.
