

## 1: Pathology Outlines - Conferences

*www.enganchecubano.com Pathology Annual, Volume 25; Part 1 Edited by www.enganchecubano.com?? www.enganchecubano.comr. Prentire Hall, New York, pages The current volume of Pathology Annual hardly needs introduction. as the series has run successfully for 2 5 years and, for the last 10 years, in two parts every year.*

Application of Con temporary Methods Edited by P. Basel, 1 9 The range is wide. Some contributions are just on technical methods of ISH, both isotopic and nonisotopic. PCR is given 12 pages, with its theoretical basis depicted as gnomically as is usual in texts addressed mainly to molecular biology researchers. Electronmicroscopy and immunogold labelling complete the technical side. More than just human immunodeficiency virus HIV-1 only is discussed. Feline leukaemia virus and simian immunodeficiency both get a chapter, but the most interesting comparative section is on visna infection in sheep. Infection of bone marrow-derived circulating dendritic cells with HIV not only reduces their numbers but impairs their antigen-presenting functions as assayed in vitro. The known morphologies of HIV location in brain cells compared here with JC virus and in lymph nodes are well described. The concluding chapter hypothesizes on the cellular dynamics of HIV lymphadenitis, illustrating how much we have learned, This book is an excellent compilation of retrovirus histomorphology, with a lot of practical material. Prentire Hall, New York, Previous volumes have been criticized from time to time for the variability of interest in the choice of their contents, which is understandable for an undertaking of this size and scope. It starts with a critical evaluation of immunohistochemistry of soft tissue tumours which is sound and useful. The chapter on Hurthle-cell tumours of the thyroid does not offer all that much that is new except on the history of the term. An update of peripheral nerve sheath tumours tidies up odd corners in this field. The chapter on campylobacter- associated gastritis is good, but it just missed the new terminology Helicobacter now applied to this orga- nism. The account of B-cell neoplasia is a little difficult for the European reader, who has become accustomed to the Kiel terminology. The survey of HIV-associated diseases of the central nervous system is exhaustive. The review of the prognostic significance of morphological parameters and flow cytometric DNA analysis in breast carcinoma offers little that is new, but it is sound. Chapters on the usefulness of endomyocardial biopsy in transplanted hearts and the role of the pathologist in the evaluation of first trimester abortions have, by the nature of these topics, a narrower appeal. The same cannot be said of the veritable treatise on endometriosis, which must be regarded as the leading contender for the best ever account of this subject. The description of lesions that may follow or remain after modern chemo- therapy of germ cell tumours is extremely useful and it sheds light on commonly encountered difficulties. The book ends with a technical chapter on plastic embed- ding. The whole of this volume is of interest and it has been extremely well edited and produced. It can be recommended to all histopathologists.
