Tablet from the Library of Ashurbanipal containing part of the Epic of Gilgamesh The first libraries consisted of archives of the earliest form of writing – the clay tablets in cuneiform script discovered in temple rooms in Sumer , [3] [4] some dating back to BC. There is also evidence of libraries at Nippur about BC and those at Nineveh about BC showing a library classification system. The tablets were stored in a variety of containers such as wooden boxes, woven baskets of reeds, or clay shelves. The colophons stated the series name, the title of the tablet, and any extra information the scribe needed to indicate. Eventually, the clay tablets were organized by subject and size. Unfortunately, due to limited to bookshelf space, once more tablets were added to the library, older ones were removed, which is why some tablets are missing from the excavated cities in Mesopotamia. This Great library was more than a place to hold books and records, it became a place of culture. The Alexandrian book collections steadily diminished as a result of natural causes, war, and wholesale theft by corrupt administrators. The library was built to store 12, scrolls and to serve as a monumental tomb for Celsus. Private or personal libraries made up of written books as opposed to the state or institutional records kept in archives appeared in classical Greece in the 5th century BC. The celebrated book collectors of Hellenistic Antiquity were listed in the late 2nd century in Deipnosophistae. All these libraries were Greek. The cultivated Hellenized diners in Deipnosophistae pass over the libraries of Rome in silence. By the time of Augustus, there were public libraries near the forums of Rome. The state archives were kept in a structure on the slope between the Roman Forum and the Capitoline Hill. Private libraries appeared during the late republic: Seneca inveighed against libraries fitted out for show by illiterate owners who scarcely read their titles in the course of a lifetime, but displayed the scrolls in bookcases armaria of citrus wood inlaid with ivory that ran right to the ceiling: Remains of the Library of Celsus at Ephesus In the West, the first public libraries were established under the Roman Empire as each succeeding emperor strove to open one or many which outshone that of his predecessor. Pollio was a lieutenant of Julius Caesar and one of his most ardent supporters. After his military victory in Illyria, Pollio felt he had enough fame and fortune to create what Julius Caesar had sought for a long time: It was the first to employ an architectural design that separated works into Greek and Latin. All subsequent Roman public libraries will have this design. During this construction, Augustus created two more public libraries. The first was the library of the Temple of Apollo on the Palatine, often called the Palatine library , and the second was the library of the Porticus of Octaviae. The Bibliotheca Pacis was built along the traditional model and had two large halls with rooms for Greek and Latin libraries containing the works of Galen and Lucius Aelius. Reading or copying was normally done in the room itself. The surviving records give only a few instances of lending features. Most of the large Roman baths were also cultural centres, built from the start with a library, a two-room arrangement with one room for Greek and one for Latin texts. Libraries were filled with parchment scrolls as at Library of Pergamum and on papyrus scrolls as at Alexandria: There were a few institutional or royal libraries which were open to an educated public such as the Serapeum collection of the Library of Alexandria , once the largest library in the ancient world , [16] but on the whole collections were private. In those rare cases where it was possible for a scholar to consult library books, there seems to have been no direct access to the stacks. In all recorded cases, the books were kept in a relatively small room where the staff went to get them for the readers, who had to consult them in an adjoining hall or covered walkway. Most of the works in catalogs were of a religious nature, such as volumes of the Bible or religious service books. In the early Middle Ages, Aristotle was more popular. Additionally, there was quite a bit of censoring within libraries of the time; many works that were "scientific and metaphysical" were not included in the majority of libraries during that time period. Cicero was also an especially popular author along with the histories of Sallust. One of the most popular was Ovid, mentioned by approximately twenty French catalogues and nearly thirty German ones. Han Chinese scholar Liu Xiang established the first library classification system during the Han dynasty , [29] and the first book notation

system. At this time, the library catalogue was written on scrolls of fine silk and stored in silk bags. Malatestiana Library of Cesena , the first European civic library [30] During the Late Antiquity and Middle Ages periods, there was no Rome of the kind that ruled the Mediterranean for centuries and spawned the culture that produced twenty-eight public libraries in the urbs Roma. Christianity was a new force in Europe and many of the faithful saw Hellenistic culture as pagan. As such, many classical Greek works, written on scrolls, were left to decay as only Christian texts were thought fit for preservation in a codex, the progenitor of the modern book. Thus a seventeenth-century edition of the Ignatian epistles, in Mar Saba, had copied onto its last pages, probably in the early eighteenth century, a passage allegedly from the letters of Clement of Alexandria". In Byzantium, much of this work devoted to preserving Hellenistic thought in codex form was performed in scriptoriums by monks. These libraries were devoted solely to the education of the monks and were seen as essential to their spiritual development. As a result, many of these Greek works were copied, and thus saved, in monastic scriptoriums. As a result, Byzantium revived Classical models of education and libraries. Constantine himself wanted such a library but his short rule denied him the ability to see his vision to fruition. His son Constantius II made this dream a reality and created an imperial library in a portico of the royal palace. Themistius set about a bold program to create an imperial public library that would be the centerpiece of the new intellectual capital of Constantinople. Themistius hired calligraphers and craftsman to produce the actual codices. He also appointed educators and created a university-like school centered around the library. Despite this, he had a profound impact on the imperial library and sought both Christian and pagan books for its collections. The Library of the Patriarchate of Constantinople was founded most likely during the reign of Constantine the Great in the 4th century. While much is not known about the actual library itself, it is known that many of its contents were subject to destruction as religious in-fighting ultimately resulted in book burnings. Many of these were owned by church members and the aristocracy. Cassiodorus , minister to Theodoric, established a monastery at Vivarium in the toe of Italy modern Calabria with a library where he attempted to bring Greek learning to Latin readers and preserve texts both sacred and secular for future generations. As its unofficial librarian, Cassiodorus not only collected as many manuscripts as he could, he also wrote treatises aimed at instructing his monks in the proper uses of reading and methods for copying texts accurately. In the end, however, the library at Vivarium was dispersed and lost within a century. Early paper was called bagdatikos, meaning "from Baghdad", because it was introduced to the west mainly by this city. They were each endowed by Islamic sects with the purpose of representing their tenets as well as promoting the dissemination of secular knowledge. In Shiraz , Adhud al-Daula d. The buildings were topped with domes, and comprised an upper and a lower story with a total, according to the chief official, of rooms In each department , catalogues were placed on a shelf Organization was a strength of Islamic Libraries during the Golden Age 7th-14th century. In this period, books were organized by subject. Within the subject, the materials were further organized by when the libraries gained the item, not by last name of the author or the title of the book. Also, Islamic libraries may be the first to have implemented a catalogue of owned materials. The content of a bookshelf was recorded on paper and attached to the end of shelf. Arab-Islamic people also were very favorable of public knowledge. Public libraries were very popular along with mosque, private, and academic libraries. Instead of being available to the elite of society, such as caliphs and princes, information was something that was offered to everyone. Some of the libraries were said to let patrons check out up to items. These buildings were also made for comfort of the readers and information seekers. It was said that the rooms had carpets for sitting and reading comfortably. Also, openings such as doors and windows were secured closed as to protect patrons against cold drafts. Others were victim of wars and religious strife in the Islamic world. However, a few examples of these medieval libraries, such as the libraries of Chinguetti in West Africa , remain intact and relatively unchanged. Another ancient library from this period which is still operational and expanding is the Central Library of Astan Quds Razavi in the Iranian city of Mashhad , which has been operating for more than six centuries. From there they eventually made their way into other parts of Christian Europe. These copies joined works that had been preserved directly by Christian monks from Greek and Roman originals, as well as copies Western Christian monks made of Byzantine works. The resulting conglomerate libraries are the basis of every modern library today. Buddhist scriptures , educational materials,

and histories were stored in libraries in pre-modern Southeast Asia. In Burma , a royal library called the Pitakataik was legendarily founded by King Anawrahta ; [61] in the 18th century, British envoy Michael Symes , on visiting this library, wrote that "it is not improbable that his Birman majesty may possess a more numerous library than any potentate, from the banks of the Danube to the borders of China". In Thailand, libraries called ho trai were built throughout the country, usually on stilts above a pond to prevent bugs from eating at the books. Like the Christian libraries, they mostly contained books which were made of paper , and took a codex or modern form instead of scrolls; they could be found in mosques, private homes, and universities, from Timbuktu to Afghanistan and modern day Pakistan. Modern Islamic libraries for the most part do not hold these antique books; many were lost, destroyed by Mongols , [65] or removed to European libraries and museums during the colonial period. Lending was a means by which books could be copied and spread. In , the council of Paris condemned those monasteries that still forbade loaning books, reminding them that lending is "one of the chief works of mercy". Shelves built above and between back-to-back lecterns were the beginning of bookpresses. The chain was attached at the fore-edge of a book rather than to its spine. Book presses came to be arranged in carrels perpendicular to the walls and therefore to the windows in order to maximize lighting, with low bookcases in front of the windows. This "stall system" i. In European libraries, bookcases were arranged parallel to and against the walls. Also, in Eastern Christianity monastery libraries kept important manuscripts. Reading room of the Laurentian Library From the 15th century in central and northern Italy, libraries of humanists and their enlightened patrons provided a nucleus around which an " academy " of scholars congregated in each Italian city of consequence. Malatesta Novello , lord of Cesena , founded the Malatestiana Library. The 16th and 17th centuries saw other privately endowed libraries assembled in Rome: However, they keep many valuable manuscripts of Greek, Latin, and Biblical works.

This new resource puts IMLS data—comprising agency data such as grants administration and data about museums, libraries, and related organizations—at the fingertips of researchers, developers, and interested members of the public who want to dig deeper. Library Card Holders As mentioned above, the most current federal statistics report on public libraries is Public Libraries in the United States Survey: Fiscal Year December , conducted by the Institute of Museum and Library Services IMLS , which gives the most recent usage statistics as reported by libraries, with numbers from each of the 50 states and the District of Columbia. There were , registered borrowers, according to Table 8. Number of public library services and library services per capita, by type of service and state: Fiscal year , on pages of this page PDF of the Supplemental Tables formerly formed the bulk of the reports; now separated out and labeled "supplemental" of the Public Libraries in the United States Survey: Over this time, we have seen libraries in a constant evolution in tandem with advances in technology. Just as libraries offered word processing software before personal computers were commonplace in homes and offered many people their first chance to try the Internet, public libraries now enable many patrons to explore e-readers, tablets and maker spaces. Many challenges remain, such as the scant capacity faced by many small and rural libraries and a persistent digital divide that continues to strongly impact Americans with the lowest incomes. Public libraries, whose services have innovatively adapted to the shifting economic and social landscape of the past two decades, are well positioned to act as a national network supporting communities in an age of digital disruption. Sixty-five percent of those polled said they had visited the library in the past year; women are significantly more likely than men 72 percent vs. Overall, 58 percent of those surveyed said they had a library card, and the largest group was, again, women, especially working women and working mothers. Thirty-one percent of adults rank the library at the top of their list of tax-supported services. The survey was conducted October , Data are collected from a sample of 50, to 60, households through personal and telephone interviews. An excerpt from the Overview: But this finding masks a large difference among Latinos. This gap in use between foreign-born Hispanics and U. This greater use of computers at public libraries by minorities than by whites may reflect the greater availability of computers in White and Asian households. National Center for Education Statistics. What Makes a Difference? The following table is taken from that article. Library Usage by Ethnicity.

Get this from a library! Report on Department of Mental Health, Region III, and Norwich Hospital, for the fiscal years ended . [Connecticut. Auditors of Public Accounts.:].

Periodicals are magazines, scholarly journals, newspapers, and newsletters. They are publications that are published at regular intervals. Daily newspapers, weekly magazines, and quarterly journals are all periodicals. Many periodicals are written for a general audience whose readers are not expected to have specialized knowledge or training. We usually call these periodicals magazines. However, probably even more periodicals are written for specialists and have articles that are difficult for readers who lack that background. These periodicals, written for a scholarly audience, are called journals. For a better understanding of how to identify different types of periodicals, see Scholarly vs. Popular Periodicals at the end of this lesson. Periodical articles are often the best sources to use in research report writing. The chief advantage that magazines have over books is time. Information comes out more quickly in periodicals than it can in books. Often times, an article that will eventually appear in book form, originally appears in an article in a magazine or journal. Some disciplines, especially the science and technology fields such as engineering, rely very heavily on periodicals for the latest developments in their rapidly changing fields. Results of original research are often printed in periodicals first. Reviews of new books, works of art and performances often only appear in periodicals. Often the information contained in a periodical article will never appear elsewhere, either in a book or other work. Periodicals can often provide good summary information on a field. For a short research paper, information from articles may be easier to manage than a lengthy book. Consider how in-depth you want your information to be. Research results published in periodicals is often quickly disproved by more current research. Depending on what your topic is, you may want to make sure that the information you have is indeed the latest report. A book may be a better format in that several studies may be compared at once and indicate the progression of different experiments or studies and may indicate a more complete picture. Because of the pressure of deadlines with periodicals, information is not always checked as thoroughly as it is in books. This problem will vary, depending on the review policy of a particular publication. Even if you are only interested in one section of a larger work on a topic, having the context of the larger work can help in the understanding of the one section. Where are periodicals located? Some periodicals are still available in print and located in the Periodicals Collection on Level 3 Rasmuson Library. Keep in mind, print periodicals can also be found on every other level of the library. Annual reports and proceedings from conferences can be found in the regular stacks Alaskan magazines and newspapers can be found in the Alaska and Polar Regions Collection and journals from U. Continue on to Periodical Indexes to learn how to find the articles on your topic and the periodicals that publish those articles. This page was last modified on August 19, Research Help.

1. *Author(s): Aslin, C J; University of East Anglia. Library. Title(s): Periodicals in libraries of the Norwich area; a finding list. [C. J. Aslin, editor.*

5: Norwich's Hidden Libraries | City Of Stories

To find a library in your area that owns a particular item, enter your location under "Find a a copy in the library" in the item record. If there isn't a library near you that owns a particular item, check with your local public library--it's likely that they can offer inter-library loan services to help you get the item you need.

6: Public Library Use | Tools, Publications & Resources

Periodicals that are "scholarly", "refereed", or "peer-reviewed" all have articles that are reviewed by experts in the

subject. For other types of periodicals, the articles may be reviewed by a professional editor who is not an expert in the subject.

7: ⚡ Busiest libraries in the United Kingdom | Statistic

Use online databases to find articles in journals, newspapers, and magazines (periodicals). You can search for periodical articles by the article author, title, or keyword by using databases in your subject area in Databases.

8: Browse subject: Coptic Church -- Periodicals | The Online Books Page

A periodicals or serials librarian is a librarian who works in the specialized area of serials librarianship. A periodicals librarian can have a variety of duties, but generally work specifically with the acquisition, collection development, organization, preservation, and sometimes cataloging of periodicals.
