Man of Extremes Lyrics: Ya' know I love ya' 'til it hurts / Ya' helped me understand the meanin' of the word / 'Cause when it's real it hurts, babe / Ya' showed me how to love and I eventually I.

The Inheritors would be foolish to face me here. And as long as the rest of you stay in my world, I can keep you safe. The Spider-Man from this universe retained the powers of the Enigma Force. As strong as the Inheritors were, they were still severely outclassed when compared to someone with such power, and therefore did not dare to step foot into this dimension. However, he could only assist them to this extent as he would lose the Enigma Force if he were to leave his universe. This resulted in the resistance of Spider-heroes to be based in the Central Park of Earth. The mentally controlled sub-atomic particle responsible for this has yet to be identified. Thus allowing him to throw the Hulk all the way to space, with only a single punch. Allowing him to survive attacks from even Solus. Spider-Man possesses the ability to achieve a state of perfect equilibrium in any position imaginable. He seems able to adjust his position by instinct, which enables him to balance himself on virtually any object, no matter how small or narrow. Spider-Man has a limited healing factor. Due to his accelerated metabolism, Spider-Man has a higher tolerance for drugs and diseases than normal humans, and he can recover from the effects of larger doses rapidly. During an encounter with the Swarm, Spider-Man was incapacitated by thousands of bee stings, but recovered in less than 24 hours. His resistance and recovery time to other toxins and diseases varies, but is typically significantly higher than normal. However, Spider-Man has the normal human tolerance for alcoholic beverages. Allowing him to dodge attacks more efficiently. A sort of cosmic consciousness. Spider-Man can sense things on a subatomic level or at great distances. This power can also force someone to tell the truth. Displaying the power of flight. Spider-Man can divert an energy flow in a different direction or convert it into a different type of energy. Diverting the flow of gravitons, for example, allows flight. As a result of energy manipulation, Spider-Man gained the ability to shoot concentrated blasts of energy from his hand. He was able to take out Jennix in a single blast. As a result of matter manipulation, Spider-Man gained the ability to fly. His speed was so great that he was able to get the Hulk from space in mere minutes. Spider-Man could use this ability to make his webbing as hard as adamantium or simply change its shape, for example, a huge glove.

Immunity to Extremes in Temperature: The costume or the Uni-Power itself protects Spider-Man against extremes in temperature.

Abilities Seemingly those of the Peter Parker of Earth. Strength level Spider-Man with the power of the Enigma Force has a base strength of tons and was able to send the Hulk flying into the moon in a single hit.

Weaknesses Unlike many superheroes, Spider-Man does not have a weakness he is automatically vulnerable to, but in recent years methods have been created to render him vulnerable. Spider-Man only retains the power of Captain Universe within his own dimension, if he is ever outside it he will only have the abilities of a "regular" Spider-Man. It also would not trigger if it detects something that is not registered as a threat like the Spider-Man clones or the Venom symbiote and its offspring and Anti-Venom. When deprived of his spider-sense, Spider-Man becomes vulnerable to surveillance and attack, and web-slinging requires most of his concentration. Perhaps as a side effect of gaining his powers, Spider-Man is susceptible to the pesticide ethyl chloride. This chemical is frequently used as a weapon by the Spider-Slayers.

His parents had moved from his native Wisconsin to St. Michael, Minnesota, a few years earlier. He was sent to St. Vincent Abbey in Pennsylvania for his novitiate year, July , and stayed on a few months longer to study physics and chemistry. Apparently that was the extent of his graduate education in science. He was elected abbot in and continued in office until his death in Like his predecessors Alexius Edelbrock and Bernard Locnikar he kept the title of college president while designating a vice president to carry out administrative duties. All the rest of his career would show that he was a born educator with particular interest in scientific fields. He had the buildings wired for electric light in On October 10 the current came on, generated by a new dynamo in the power house. The library with St. Half a dozen campus buildings of little architectural distinction, all of which are still in use, sprang up in a loose configuration behind the Quad in the first decade of the twentieth century: It stood on the high ground east of the Quad but was razed in , a few years before word of historic preservation reached Collegetown, in order to clear the site for the Prep School. Abbot Peter was keenly interested in photography. He took the lead in documenting his era on glass plates that now constitute an invaluable archival record. Enrollment doubled during his term in office and was gradually separated out into standard American levels"high school, college, seminary"although not yet labeled as such. In , the year before he took office, enrollment in the ecclesiastical course stood at 39, the other levels at In , the year of his death, there were 59 students in what was now called the School of Theology and students in the academic, collegiate, and commercial departments. Intercollegiate athletics got its start while Abbot Peter was president. Peter Engel was admired and loved for his personal warmth and fair-mindedness in spiritual and pastoral matters as well as education. A man of the extreme center, Colman Barry calls him, quiet but firm
