

## 1: Noritsu Medical Group - Pharmacy Automation. Simplified.

*PillPack is a full-service pharmacy that delivers a better, simpler experience for people managing multiple medications.*

PillPack PillPack is the first pharmacy designed to make it incredibly easy to take the right medication at the right time. We combine convenient packaging, modern technology, and personalized service to deliver a better, simpler pharmacy experience. Every two weeks, customers receive a personalized roll of pre-sorted medications, along with a recyclable dispenser. PillPack also coordinates refills and guarantees shipping of all medications on time, every time. Easy-to-use online tools allow customers to track their shipments, refills and co-pays. The components of pharmacy service at PillPack make it easy for our customers to take the right medication at the right time. I will look forward to using it. This one was a tough one, an almost winner. Wish we could have two winners spots. There are many known subscription services for drugs already. That being said, this is a clever and well executed one that addresses a huge known problem. Difficult model, with an incredible difficult ecosystem. PillPack is the first pharmacy designed to make it incredibly easy to take the right medication at the right time. Summarize the problem you set out to solve. What was the context for the project, and what was the challenge posed to you? This problem is particularly acute for the 30 million people 1 in 10 in the United States are prescribed to five or more daily medications. Many of these people have chronic conditions, such as diabetes and hypertension, for which a missed or doubled dose is both common and very dangerous. Research suggests that by helping people understand their medicines better and simplifying medication management using appropriate tools, compliance rates can be increased and better outcomes achieved. PillPack takes on the challenge of developing a comprehensive pharmacy service to remove the barriers that prevent people from taking the right medication at the right time. What point of view did you bring to the project, and were there additional criteria that you added to the brief? We set about to address each of these three problems: Retail pharmacies do not synchronize start dates for customers with multiple prescriptions, so customers have no choice but to pick up each prescription separately. The customer often neglects to pick up a prescription, missing the start date by a critical day or two or more. PillPack synchronizes medications with a day cycle, aligning start dates to the calendar week, so customers always know which day of the week their medications start. Further, PillPack delivers medications to the customers doorstep, so they always have meds they need on hand. Lack of clear information. When someone begins a routine of multiple medications they must make their own schedule by reading small-print medical information guides. They create a tracking and sorting system to try to take each medication at the right time every day. Many people use pill organizers that are refilled by hand and prone to manual error. PillPack delivers medications pre-sorted and clearly labeled with the date and time each packet should be taken. This removes the burden of self-management burden and offers a ready-to-use solution. Lack of access to consultation. Pharmacy customers pick up medication in a busy store, with very little privacy. PillPack customers reach their pharmacist directly on the phone or via email at any time. With access to consultation, customers can work through side effects to find a sustainable regimen instead of stopping medication or taking it incorrectly. Describe the rigor that informed your project. Research, ethnography, subject matter experts, materials exploration, technology, iteration, testing, etc. What stakeholder interests did you consider? Audience, business, organization, labor, manufacturing, distribution, etc. The entire system was complicated, confusing and did little to support health or wellness. TJ had one foot in the the stagnant world of pharmacy and one foot in the fast-paced realm of design and technology, and he always thought there was a better way. They started PillPack to prove that managing meds could actually be simple. They recognized that fixing pharmacy requires actually building a better pharmacy. Until customers had an alternative to traditional retail pharmacy, no app or smart pill box could truly effect the problem. After making it their mission to challenge traditional retail pharmacies, TJ and Elliot focused first on helping the people with the toughest problem - the 30 million US adults 1 in 10 who take more than 5 prescription medications a day. We believe that simple, convenient service empowers regular people to take medications correctly and achieve better overall wellness. An IDEO design team helped to redefine how consumers engage

with their pharmacy. The collaboration focused on making sure that every moment customers interact with PillPack, from signing up for the service online to using its product daily, was straightforward and reassuring. This helped us gain a strong understanding of their customers, a well-articulated product and service, and a human-centered approach to improving consumer healthcare. How does your project earn its keep in the world? What is its value? What is its impact? Social, educational, economic, paradigm-shifting, sustainable, environmental, cultural, gladdening, etc. PillPack is a full-service pharmacy available in 33 states. We believe that by making it incredibly simple to take medications correctly, our customers will be able to take meds as prescribed without the hassles, nagging, reminders and frustration usually associated with medication. As a result they will be able to achieve better health and wellness. PillPack combines well-designed packaging, personalized service, and modern technology to create a system that enables people to take the right medication at the right time - resulting in healthier, happier customers who have more time to spend living well instead of managing medications. Thank you PillPack, you are amazing! By continuously delivering on this promise we have won a customer base that not only enjoys their relationship with PillPack as a pharmacy but also finds it easier to manage medication correctly. PillPack keeps our interactions with our customers as straight-forward as possible. These are the key engagements: How did you identify the possible leverage points in the service system? How did you evaluate the importance of each, and determine the mix of interventions that would have the greatest impact? Anyone who has ever even tried to take an antibiotic or oral contraceptive every day knows that it can be hard to take medications correctly. Image trying to manage 5, 6, 7 or even dozens of medications. We realized that there had to be a better way than the current system of counting pills, coordinating medications and navigating a complex system that causes frequent and often serious errors and evaluated a few options before realizing we need to create an end-to-end service that is built around the customers needs. For example, lots of very cool products and services have been introduced around medication management - ranging from apps, to smart pill bottles, to redesigned labels. But after studying these tools, we came to believe that to truly impact the pharmacy experience you have to actually build a new kind of pharmacy from the ground up. When it comes to specific features of our current service, we spent a lot of time speaking with potential customers to understand their frustrations with traditional pharmacy. Potential customers noted frustration with multiple trips to the pharmacy, trouble sorting and organizing medications, lack of information to help them understand their own routine, and hardships around coordinating doctors, insurance and the pharmacy for prescription refill and renewal. We also read previous literature on adherence programs to understand what was successful and what was not. Rather than try to recapitulate a previous academic study, we worked on incorporating the core principles into our service. These include accessible medical information, improved packaging and readily available consultation.

We sort and deliver medications to your door at no additional cost to you. Stay up to date with your medications and manage your service with this app. The Medications page is blank with no way to do anything. If I have to use the website to set up my medications, why do I need this app? If you want your shipments sent early, you will have to request it every time. Asking to have it noted on your account will have no results. The final straw was my most recent shipment was missing 2 crucial medications, with no notification that there were missing items, much less why they were not included. Missing medications in shipments and late deliveries equate to health disruptions for your customers that a two word apology cannot atone for. Two words cannot make up for suicidal ideation and lost wages. As a result, I literally almost died. My family found me down on the floor unconscious and barely breathing. I was rushed to the hospital as a trauma patient and was hospitalized for 13 days!! Pillpack takes all the guesswork out of it and makes it easy to stay compliant with your medications. Messages are rarely answered, and if by some miracle they are answered, the issue is not resolved. All of that combined with their terrible customer service and lack of attention to detail made me cancel my account within the first week. It is so easy and the app is so user friendly. I think the iPhone version is easier to navigate than the android version. Absolutely the worst service ever. I am switching back to my local pharmacy. If you need your prescription you should think twice. Im using the iPhone X and havent been able to get reminders at all. The ability to chat with someone instead of calling is nice and the customer support through that was good. I would like to see a pill reminder feature. I have no issue remembering in the morning but I have issues remembering at night as my evening meds need a full meal with them to absorb. I have tried pill reminder apps but manage to get distracted after clearing it. What I would love since each dose has its own packet is if they added a pill reminder function with the requirement of scanning a QR code printed on the packet to mark it as taken. I only used for 1 month due to switching jobs and insurance but was hoping to get it going. This makes no sense. What a waste of time. No one makes phone calls anymore. There is a reason Amazon is so successful. They are the only company that gets it. Also, allow us to request a prescription to be deleted. Allow us to change dispense time. Allow us to request OTC through the app. Whoever coded this app did a terrible job. It saves me so much time not sorting pills and not going to pick up prescriptions in person and packing when I travel. When I am running late in the mornings, I can grab a pack and put it in my purse. Also there is no more wonder if I took my meds or not. Everything is labeled by day. Congrats to Amazon on acquiring them. Everyone should use this service! Proactive about contacting my docs for refills. I love being able to text them in the app or email a pharmacist. I tell everyone about them! The pills bagged up and separated by what time you take them is so very convenient. They always send an email letting you know when your acct will be charged and give you time to change the order. Before PillPack I literally was entering what I called hell my local cvs pharmacy every couple of weeks and they were constantly messing up, not contacting my doctor when they claimed to, and just generally being careless with something that is a very serious part of my life. Specific to the app, I love the message feature. App crashes on my phone. However, the app crashes on my IphoneX. It opens stays up for 30 seconds and then crashes. Use the service and just go to the website. The app is poorly maintained and unreliable. It is true that they had issues for a short time with their system. It messed up on sending prescription renewals to Dr. However this has been resolved and they are doing a great job. I have never received my meds late. Also they will send things overnight when necessary. I made an error when I ordered pin needles for my diabetic injection, and they shipped them overnight for free even though the error was mine. I love PillPack, and highly recommend them for anyone. Especially if you take a lot of meds at different times throughout the day. It happens on my iPhone X. It really needs to be optimized for the bigger display. There are also some other bugs in the app. Instead of having to go to the website to pay every time. It would make it so much more convenient and easier to do. Four stars for now. But in the past 6 months, it has fallen

apart. I have made dozens of calls trying to straighten it out. We are changing to Divvydose. They are new and seem to care the way PillPack did in the beginning. I think they have just gotten too big and care more about money than the patient, but they are playing with lives. I am very satisfied with how efficient it is and just great. Unfortunately the billing department is the worst group of employees ever. The normal customer service people are great but billing made mistake after mistake failing to bill my insurance or double charging for things I had already paid for. I stopped using them in the middle of when I had finally had enough. I will update this review if they can change my mind. I spent more time with them on the phone than I would have standing in line at Walgreens. They simply do not know how to scale a service. Their site is buggy and basically unusable. Not worth the hassle. Which means late prescriptions as my doctor refused to write new ones why with new dr. The company overnighted my medication. Transferred me to a pharmacist who reassured me about things. Went the extra mile. Told them as a teacher when my husband gets paid€"once a month€"so they have us a choice of dates to charge our credit card. It might go up after three or four months if everything goes like it is; and I remember to change the rating! But for sanity the others need to be organized because I keep forgetting to take them. They messed up my prescriptions and never did what they said they would. Additionally, like previous reviews, they never responded to my chat requests. Simply the worst service available. Do yourself a favor and steer clear of this service. The messaging function is broke and many times the information displayed is not up to date. According to the website my 2nd shipment was delivered but they just confirmed that this is not true and the order was never process I was never billed. And, I get better updates from service like Birchbox- this is insane and so wholly inappropriate! They responded months later! I have called them repeatedly about issues and they pretend I have not contacted them after calling, emailing and in-messaging! The packs themselves used to be great now they changed the plastic used and they tear into the next pack when torn!
