

1: Designing small gardens: choosing plants | Life and style | The Guardian

Maximize the perks by planning your small garden before you plant. Before you start digging, you need to have some vision of what you expect from your new garden and a basic overview of the space in which you will be gardening.

Tea Garden in a Box Gardening editor Stephen Orr likes to give friends this portable garden, which contains the ingredients for tisane, or herbal tea. To make one, plant mint, rose geranium, pineapple sage, and lavender in a wooden wine crate or other container with ample drainage. To get the gift to keep on giving, be sure to tell the recipient to place it in full sun outdoors and to pluck a few sprigs for morning tea or for adding to black tea. Devote the most planting space to the veggies your family loves best. Keep in mind that large plants such as beans, cucumbers, and tomatoes require large pots two feet in diameter or more. Smaller pots are perfect for peppers, greens, kale, and herbs, and they look great tucked between larger containers. For season-long interest, combine plants with varied flowering times so that some things will be ripening while others will be ready to harvest. In hot weather, water evaporates quickly from the elevated soil in a container. You may need to irrigate your pots every day if temperatures go above 90 degrees. Sturdy containers that can be left out year-round, above, are a good solution. These three sizes of these stackable planters in a lightweight, all weather resin accommodate all kinds of veggies. Large plants such as tomatoes will need staking: Bamboo is an attractive, inexpensive option; sturdy metal tomato cages work well, too. By keeping the plants upright and well aerated, you help minimize the possibility of disease while maximizing yield. You also increase available space, allowing an under planting of small plants such as carrots, radishes, or herbs. These fiery habanero and hot lemon chiles and purple-leaved peppers make a colorful mix. Try to choose plants with a variety of shapes and colors, such as purple basil, tall lemon verbena, and chives, to make the display attractive. Herbs are particularly good choices for urban window boxes, since they can be maintained with just a watering can and a pair of shears. Most herbs require minimal fertilizing. In fact, overfed herbs lose essential oils in their leaves, making them less flavorful. Combine your most frequently used herbs, or put together some thematic plantings, such as Asian herbs including garlic chives, Thai basil, lemongrass, and shiso and tea herbs mint, chamomile, lemon balm, and lemon verbena ; or Italian herbs rosemary, basil, oregano, and chives , left. Other good mixes include edible flowers nasturtiums, borage, calendula, fennel, and violets and salad greens lettuce, arugula, and dill. Swipe here for next slide 11 of 13 Pick Pretty Plants Variegated herbs, such as this two-tone mint, make a strong visual impression without sacrificing flavor or productivity when mixed with solid-color plants.

2: Small Vegetable Garden Plans and Ideas

If flowers are your thing, this is the small garden plan for you. Seven high-performance perennials will give you plenty of flowers, all summer long and into fall. Tuck the 9-by-foot garden into a corner or plop it in the middle of the lawn -- these plants will put on a show.

Here are a few easy tips and ideas to help you plan! Square foot, container and other small plot garden plans are perfect for growing vegetables when space or time are limited. Not only can you save money and eat better food, but learning how to provide for your family without depending on outside sources is practical and prudent. Small Vegetable Garden Ideas Here are some great examples of small veggie gardening plans. A container garden can be the perfect solution, or a beautiful patio garden can provide an abundance of fresh vegetables. Vegetable plants can also be added to an existing sunny border or flower bed! The only limitation is your imagination, and of course, finding a sunny location for your garden. A DIY raised bed can be the perfect fit for many gardening needs. They can be quite attractive with a little creativity applied to the design and materials. Beginner vegetable gardens come in all shapes and sizes; large, small, and in-between. In a crowded landscape, your garden may have to take a sharp bend, form a semi-circle, or be placed in a flower bed, or on the patio. Square foot gardens 4 ft. Nail or stake the ends together to create a square with an inner area of four feet. Divide the square into 16 equal squares, using strips of wood or string as dividers. Several plants may be planted in rows, smaller squares, or at random in the small vegetable plots. For instance, fill one square with four bean plants. Divide the area into smaller squares and plant one seed in the middle of each. A square can hold 36 radishes or 16 onions. The seeds can be scattered across the square or sown in small rows. Harvest early by thinning out young plants for use as tender greens or roots, creating room for the rest to grow. Trellises add a third dimension to small vegetable garden plans. A trellis is useful to gardeners seeking to maximize space. Rather than allowing vine crops to sprawl across the garden, send plants such as cantaloupe, watermelon, and cucumbers growing skyward. Many plants can be successfully grown in cages, including tomatoes, watermelons, and eggplants. In addition to space-saving planting techniques, gardeners have an additional resource: Be advised, while the dwarf varieties take up less garden room, the harvests are somewhat smaller than their full size relatives. Geometric planting patterns make maximum use of space in small vegetable garden plans. Gardeners use simple designs to fill wide beds with vegetables. As they say, necessity is the mother of invention! Spacing Vegetables in Small Plot Gardens Beautiful Small Vegetable Garden Beans are a sure producer and should be spaced four plants per square foot in small vegetable garden plans. Broccoli, Brussels sprouts, peppers, and eggplant may need staking and space 1 plant each square foot. Cabbage and cauliflower produces a single head planted at one to a foot. Trellis or stake tomatoes at one plant per square foot. Make successive plantings of endive, kohlrabi, and lettuce, at four plants per square foot. Harvest individual leaves of kale and parsley spacing four plants per square foot. Choose a sunny location for your container garden! Use recycled medium and large size containers, or purchase plastic, clay or ceramic pots online or from your local garden center. Fill your containers with a good quality potting soil with compost and fertilizer already added. Plant your containers with vegetable seeds or small plants following the planting and spacing instructions on the seed packets or plant labels. Growing tomatoes, cucumbers, lettuce, carrots, radishes, peppers, eggplants, onions and more is easily accomplished in a container garden. Just be careful to provide plenty of water during hot weather, as a container garden will dry out more quickly than an in-ground garden. Vertical Gardening Suggestion Vertical Gardening in a Patio Use cages or trellises to support larger-growing vegetables such as tomatoes, cucumbers and peppers. A single stake will support floppy, low growing plants that might otherwise be injured by winds or abundant production. A wire cage gives the best support for tall-growing plants. Vegetable gardening even on a smaller scale can produce bumper crops. In fact, with vertical gardening, the sky is the limit! These are just three easy ways for planning and growing a small vegetable garden. There are many more possibilities that may work for you. You will be surprised how fun and fulfilling it is to have your own vegetable garden. Gardening is a great hobby and life-skill for the whole family to learn and enjoy. So have some fun, and enjoy the gardening experience. Each

garden you grow will be a new opportunity for creativity and learning!

3: Small Garden Design Ideas | Garden Design

Many people garden without a plan, but a small space is easily overwhelmed by random purchases. Any garden requires some amount of planning to be really successful, especially if you have a black thumb like me! And more so when it's a small one. I have kept (real) gardens for years, letting plants.

Contact Author Many people garden without a plan, but a small space is easily overwhelmed by random purchases. Any garden requires some amount of planning to be really successful, especially if you have a black thumb like me! I have kept real gardens for years, letting plants ramble where they would. When I moved to countries where apartments with small balconies was normal, I had to completely change my gardening techniques - because all my potted plants kept dying. A small garden requires a much less random and forgetful approach than I was used to. In my last move, I had the chance to start from scratch, and carefully planned to make the most of the space. My balcony garden, one month after planting. Source Learn about your space Earth and water weigh a lot, not to mention ceramic planters if you want to use them, rocks and water features. If you are gardening on a balcony or a roof terrace, work out how much weight it can hold - a collapse would be very expensive to repair! If there is decking under your garden, it will probably need protection. Trays under pots protect the wood from the soil and enzymes that run out with excess water. Raising the pots above the wood, using low shelves or wheeled pot-plant supports, can prevent staining. If you have a walled space, you may consider attaching planters to the walls. Find out what type of material the walls are made of, and what equipment you might need. Watch the sun and the weather for a season or two to learn when, where and how much sunlight reaches into the garden. Is your balcony garden Cactus and succulents are the only things that can survive. Veggies, herbs and a variety of flowers do well here. Ferns, leafy plants and some flowers would be happy here. I should remember to water more regularly. Prone to strong winds and heavy rain, and although it is protected a little from snow, I must move plants inside during cold winter. On a more positive note, it is south-facing, with a lot of sun at one end, especially in the afternoons when it pours through the windows and turns the kitchen into an oven! I needed to work out some kind of sun protection that still allowed light and air in but kept the insects out. I learned the hard way when I had my larger gardens, how much an unplanned plant shopping trip could cost when I had set no limit. To add to the pain, many of these plants died! Although, you should also be prepared to spend a little extra. My water butt - a large, sealed planter and tray. Planter types Ceramic pots look great, but are expensive, heavy, and can allow the soil to dry out quickly. They are better to prevent plants from falling over though. Plastic pots are cheaper, and many imitate a ceramic look. Keep in mind that black pots can cook plant roots if in the full summer sun for a long time. Terracotta or light colors are better in the hot sun. The size of the pots will determine which plants will thrive in them. Almost any container can be used as a plant pot, as long as it does not disintegrate in water, and the water can drain properly. Half a month after planting, the lettuce and Asian greens are thriving. If it is always in shade, there is no point choosing plants that require a lot of sun most fruit and vegetables. Or you can fix planters to the walls. A selection of themes: From shade to sunny, you will find herbs that can grow in most conditions. My mother would certainly love such a balcony garden! To help with pollination and pest control, I wanted some flowering companion plants encourage the helpful insects. The plan of my little garden with extras included. The table is moved when guests visit. Source Map the space and choose your plants Keep in mind what you want to use the area for. There is no point filling the space with plants when you use a lot of room for entertaining. You may like to choose a longer list of plants first, then cut your list down as you draw them on your plan. Decide which plants you will buy as seedlings or fully grown plants, and which you will buy as seeds. Seeds are usually cheaper, but may be more difficult to grow. Some plants grow wonderfully from cuttings or when a larger plant is divided. Check with friends and family for plants, cuttings, divisions or spare seeds to keep the costs lower. Asian greens, just after the seeds have sprouted. Source My list of plants I had to keep in mind that the longer lived plants will need to come inside during winter and therefore I must have space for them. Most of the others I have treated as annuals, and chose seeds - the left-over seeds will be used next year to restart my balcony garden after winter. I also wanted a water feature,

both for the soothing sound of running water, to provide water to birds, and increase the variety of beneficial insects. Click thumbnail to view full-size Just after the initial balcony garden purchase. Source Tubs filled, plants re-potted, seeds planted. Source A little feature creep - a homemade Japanese water fountain! Source A productive shortlist Herbs: If the space and budget had allowed, I would have included spring bulbs, bay, kumquat and lime trees, strawberries, sunflowers, cucumbers, capsicums peppers , lemongrass, aloe vera for burns , a variety of cut-able and scented flowers, a worm farm, plus some fish for the water feature. The rest must wait for next year or a larger balcony. Buy and plant - the fun part! Finally - shopping and planting! Try to choose a day that is not too hot, or with stormy weather, and re-pot any plants that need it immediately. If planting seeds, you may have better results with a seed raising mixture instead of regular potting soil. I either use a layer at the top of the pot and plant the seeds directly outside, or start the seeds in degradable cardboard egg-cartons, keeping them inside until the weather is warm enough, and the seedlings are large enough to be transplanted. Keep an eye on the soil of your pots - it is easy to under and over-water. Feel the soil or use a water indicator to check before watering. Read and follow seed-packet directions and plant labels. The most important part of growing a garden is to enjoy it. Spend time in it every day, take photographs of your plants, watch it change throughout the seasons. Talking to your plants is completely optional, although many swear it helps them grow!

4: Vegetable Garden Planner: Design Your Best Garden Ever - MOTHER EARTH NEWS

Unless you want to have zucchini taking up residence in your attic, plan your garden with care. Start small. A good-size beginner vegetable garden is about 16x10 feet and features crops that are easy to grow.

Bookmark this page and click the green launch button below to return to the Garden Planner login page. Growing a great vegetable garden involves juggling the needs of dozens of different crops. Some like it hot while others prefer cool spring or fall growing conditions. Some can be closely planted while others need lots of room. But figuring out when to plant what and where just got easier. To get all the same great features on your iPad, try our Grow Planner app. Here are some of the things the Vegetable Garden Planner can do: Find Frost Dates Find the average first and last frost dates for your area, based on records from over 5,000 weather stations across the United States and Canada. If your experience in your microclimate points you toward different dates, you have the option of setting the frost dates yourself. The Planner will use these dates to tell you the best planting times for more than 100 garden crops. This function is a great one to use during the free 7-day trial. If you want, the Planner will even send you twice-monthly reminders about what crops to sow and plant from your plans. Garden Bed Design Experiment with bed designs and plant placement. The vegetables and herbs have already been coded with space requirements, so you can quickly see how many will fit in a given bed or row. Or, use the Garden Planner to design new beds for any garden. Planting Guidance Get a personalized planting chart. Once your plan is complete the software compiles a chart showing how many of each plant you need to buy or raise from seed, the correct spacing and recommended planting dates for your area. You can print both the plan and plant list as a handy reference to take into your garden. If you plan to grow fall carrots after spring peas, or plant fall garlic in the same space used for summer snap beans, you can incorporate end dates for certain plantings into your plan. The plan will then show available space for a second crop. Plants are coded according to the botanical family to which they belong, and the Garden Planner keeps track of what you have grown where. Plan cover crop plantings. The Garden Planner includes several common cover crop varieties for improving soil. Great Gardening Records Keep track of varieties. The notes will be stored so that you can refer to them during the next planting season. If you grow any unusual plants then these can be added as varieties of the generic plant symbols such as "fruit bush," "herb," etc. You can view instructional videos or sign up for the free trial no credit card or personal information beyond a valid email address is required. I want to get started! What are gardeners saying about the Garden Planner? Thank you so much for the thoughtfulness and creativity of this all-in-one Garden Planner. We will be starting our own seeds for 99 percent of what we plant. Thanks to the Planner, we know how many plants we are going to need for every row! All of a sudden, I realized that not only were vegetables listed, but the email was personalized and named particular varieties that I had entered in my garden plan Your Garden Planner is incredible, and I plan to use it for many years to come. Thanks for such a great resource! Thank you for making the Garden Planner so visual and easy to move plants from one area to another. All the useful videos on succession planting, planting reminders, etc. I could go on and on. This is just the best!

5: Small Yard Landscapes - Landscaping Network

Determine your likes, down to the particulars. Moore knew she wanted a Mediterranean-style garden compatible with both her Spanish-style stucco home and its Mexican folk art-inspired interior.

Krista Sheehan Design a space with dual purposes. Guests can sit at their tables to watch the ceremony. You can also transform the ceremony space into a reception area while your guests have a cocktail hour at another location. To save money, use the same chairs at both sites. Let each of your guests know that you are planning on a garden wedding by stating it on your invitation. The timing of your reception will dictate whether they should plan on a light luncheon or a full meal. The traditional setting for an outdoor garden ceremony is underneath an arbor or arch. You can find these in garden centers and then decorate them with tulle or flowers. Look for an arbor that you can also put in your backyard later as a memento from your big day. Carry the garden theme throughout the wedding. A small garden wedding has a built in theme. Decorate the cake with flowers. Use willow twigs for the centerpieces. Give out custom seed packets for useable wedding favors. You can even include a small terra cotta pot for your guests to grow their own plants. You can serve a light luncheon depending on the time of day. Set up a dessert bar. Make sure your guests have plenty to drink since they will be outside. Set up an inexpensive drink station by putting water and ice in big glass containers with a ladle. Float limes or lemons in the water for flavor and color. This is essential if your reception is going to continue into the evening. Rent battery powered chandeliers to bring a touch of class to the wedding. Candles make inexpensive centerpieces that cast mood lighting across the garden. String Christmas lights through the trees for added ambiance. Tips Keep it simple. Gardens are beautiful places full of plants and flowers. This saves you money on your floral budget. Plan your colors around the plants in the garden to maximize the space.
