A pneumatic system consists of a compressor plant, pipe lines, control valves, drive members and related auxiliary appliances. The air is compressed in an air compressor and from the compressor plant the flow medium is transmitted to the pneumatic cylinder through a well laid pipe line system.

When coupled with a vacuum pump and sequencing panel both priced separately, the RN Series provides automatic loading of pellet materials. As the station calls out for a load, a sequencing panel sends a signal to the RN to open its sequencing valve and pull vacuum on this receiver. The material is pulled from the connected source until the fill cycle is complete. Then, the material is dumped from the receiver immediately by means of a flapper valve or held for future use by a positive shutoff valve. A built-in screen prevents carry-over of pellet material back to the vacuum pump. For materials which have significant fines and dust, an optional dust collector should be purchased to reduce maintenance and protect the vacuum pump. Standard Specifications Air operated sequencing valve in lid requires psi of filtered, lubricated shop air for solenoid actuators and control cylinders. The total supply air required per cycle is 0. Mild steel construction Check valve for common material line applications Swing-gate or knife-gate positive shut-off discharge valve VAC control voltage Director series sequencing control panel Central vacuum power unit Central dust collector High temperature design The RN Series: When coupled with a vacuum pump and sequencing panel, the RP Series provides automatic loading of materials. No plant compressed air is used for cleaning. At the start of the cycle, air is drawn backward through one set of filter bags, dislodging any fines and dropping them back into the hopper. After filling, the second set of filters is back flushed. Finally, both filters are opened; the resin is delivered to its destination. The RP Series avoids carry-over of dust back to the vacuum power unit. The filter bags in the RP Series feature large filter areas to promote low, stable pressure drop. No valves come into contact with conveyed material and no tools are needed for filter cleaning or changes. Multiple station capability is engineered into the RP Series design, allowing use of vacuum valves. An optional modular control box operates valves from the existing sequencing fill signal to minimize field wiring. Standard Features Air operated sequencing valve in lid requires psi of filtered, lubricated shop air for solenoid actuators and control cylinders. Internal self-cleaning filter bags for granular or dusty materials 24 VDC control voltage Flapper-type discharge valve with magnetic switch Removable lid with V-band clamp Mild steel construction Check valve for common material line applications Swing-gate or knife-gate positive shut-off discharge valve VAC control voltage.

PNEUMATIC MATERIAL HANDLING EQUIPMENT PROJECT pdf

Our pneumatic conveying systems handle a multitude of dry bulk materials for countless industriesâ€”from manufacturing to transportation, energy to utilities, and much more in between. Whether you need to transfer material, bag it, unload it, or convey it over long distances, we have the exact process equipment to meet your specific needs.

6: Used Conveyors For Sale, Industrial Conveyor Systems, | SPI

Pneumatic Conveying Inc. (Pneu-Con) has been providing innovative, economical bulk material handling equipment and quality pneumatic conveying system installations to our valued customers for over 30 years.

7: Pneumatic Material Handling Equipment

Pneumatics is one of the most used systems in these days. Today equipment and system use this type of actuating because it is a very safe, economic and ease to implement.

Process Control's material handling equipment is specially designed for bulk conveying of plastic materials. Years of experience with plastic processors enable Process Control engineers to properly size conveying equipment for reliable, cost-effective loading of gravimetric or bulk systems.

9: Pneumatic Conveying/Material Handling | Airsystem Sales

Airsystem Sales, Inc. represents different manufacturers of equipment in the air pollution control, air handling and material handling industries, each with their own particular expertise. Below is a list of the products categorized by major divisions.
