

## 1: Buy Polaris Pool Cleaner Replacement Parts

*Polaris Pool Cleaner Parts Diagram Polaris Pool Cleaner. The Polaris Pool cleaner uses a booster pump to propell the cleaners. Polaris Parts are in stock ready to ship.*

Hold the back up valve out of the water and verify that it cycles on and off. A complete cycle takes about three minutes. Check the wheel RPM. If more than 32 RPM, unscrew the pressure relief valve to decrease water flow to cleaner. Confirm that the blue restrictor disc is installed in the UWF to decrease water flow. Or, install the red restrictor disc to decrease water flow even more. Verify the back-up valve is cycling. Hold the valve out of the water and watch the jet. It should come on and go off. Check the filter screen in the Quick Disconnect and clean, if necessary. Clean the skimmer basket, pump basket, and pool filter. Check all of the hoses, connections, and swivels for leaks that cause loss of water pressure. Adjust the thrust jet. Make sure feed hose is floating. Make sure the opening at the end of the sweep hose is not blocked by the sweep hose scrubber. Adjust the sweep hose to a gentle sweeping motion. Adjust the speed of the sweep hose by tightening the adjustment screw. Replace the sweep hose scrubber if it is worn or missing. Add a sweep hose weight Part No. B2 to keep the sweep hose from spraying. Verify that feed hose reaches within 6" of the farthest point of the pool. If not, order a new hose section from your Polaris dealer. Check the thrust jet for straight back position that optimizes random turning. While the cleaner is operating, hold it upside down and look into the vacuum tube. There should be two distinct, even jets of water. The cleaner is running in circles on its side. Check the filter bag, if full it can weigh the cleaner down on one side. Remove the head float and shake it. If there is water in the float, order a new one. Check the hose floats to make sure they are spaced evenly. Use the Polaris pressure tester to check the booster pump pressure. Check that the metal pre-filter is present and not clogged. Make sure that the hose weight adjustment nut is screwed down correctly. Make sure the hoses have been cut as indicated in the instructions. Make sure that the blue reducing disk has not been installed in the quick disconnect. Check that the booster pump is working normally. Clean the skimmer baskets, sand filter, and pump basket. Unscrew the hose-weight adjustment nut until the desired setting is obtained. Fit the flow limiter red or blue into the quick disconnect. Cleaner does not move but there is pressure going to the unit. If they are low or the wheels are not spinning then check the in-line filter for debris. If the wheels are moving too quickly then install the red restrictor disc. Ensure that the head float is not filled with water. Try running the cleaner without the bag and if it fixes the issue then clean the bag with soap and warm water.

## 2: Find Parts - View Online Parts Catalogs | Polaris

*View this Polaris parts diagram to order everything from screws, track tires, to feed hose kits. Polaris Pool Cleaner Parts In-Stock | Polaris Parts Diagram JavaScript seems to be disabled in your browser.*
