

## 1: Pony Express Pipeline (PXP) - System Information - Tallgrass Energy

*The approximately mile Pony Express (PXP) crude oil pipeline originates in Guernsey, Wyo., and runs through Colorado, Nebraska and Kansas, connecting with three refineries before terminating in Cushing, Okla. Cushing is North America's crude oil hub and a key trading and pricing point for NYMEX WTI.*

The funds will go toward a multi-use trail near Sterling High School. The mile long pipeline connects Guernsey, Wyo. While miles " from Lincoln County, Kan. The pipeline transports light, sweet crude oil from the Bakken production area of North Dakota and eastern Montana. That project will add another 90, barrels per day from northeast Colorado " from north central Weld County through Logan County " to the pipeline, with plans to expand further from there. Advertisement Johnson also said that the station has four to five direct employees now, and will have 10 by the time they bring NECL online. There will also be six other employees in the Sterling area. The money will be put toward a trail project near Sterling High School that will improve safety and recreation in that area. Local officials join Tallgrass Energy representatives in a ribbon cutting at the Sterling pumping station for the Pony Express Pipeline Wednesday, Oct. One of the guides, Blain Johnson, has over 30 years of experience in the field, and worked at the Sterling station when it was converted to natural gas. During this conversion back to crude, he said the pipeline went through a lot of upgrades and multiple inspections. He explained how the crude oil will come into and flow out of the pumping station once it is brought online. That will happen by the end of the month. Inside the pump house, Johnson talked about the two electric-motor pumps and what will be done to bring them online. The level of oil in the lines is also monitored electronically. Once the air is bled from the pipes the hoses are disconnected and the drains closed. A third pump will be brought in for the NECL expansion. The pipeline construction is slated to be complete by December, and they expect to be loading tanks by April. While the process sounds simple, Johnson said, there are always "bugs" to be worked out during the flooding and commissioning process.
