

PROGRAM IMPLEMENTATION PLAN FOR ARTCC MAINTENANCE CONTROL CENTER (AMCC) pdf

1: * ARTCC (Aviation) - Definition, meaning - Online Encyclopedia

Get this from a library! Program implementation plan for ARTCC Maintenance Control Center (AMCC).. [United States. Federal Aviation Administration.].

Some of the sectors cover extremely large geographic areas and on average use more communications frequencies per sector than any other facility. It provides single sensor and a mosaic display of traffic and weather using long- and short-range radars and at Anchorage it processes and displays Automatic Dependent Surveillance-Broadcast ADS-B surveillance as well. FDP provides new hardware and software with added capabilities. The ATOP program fully integrated flight and radar data processing, detects conflicts between aircraft, provides data link and surveillance capabilities, and automated the manual processes used previously. ATOP also reduced the workload on controllers through the use of electronic flight strips instead of the paper strip method used for decades to track trans-oceanic aircraft. Since the ATOP hardware was procured in many components have reached end of life. This is part of the plan to implement a total system upgrade midway through the planned ATOP system life cycle. The refresh is scheduled to replace operating systems and all major system components e. The technology refresh is planned for Flexible tracks are updated twice a day using forecasted winds aloft and separation vertical and lateral requirements. The DOTS oceanic traffic display gives a visual presentation of tracks and weather. The DOTS sends traffic advisories and track advisories to users and receives aircraft progress reports from the commercial communications service providers CCSP. These access circuits may be implemented by a copper or fiber optic cable, microwave radio, or leased services. Phase 2 ground station sites are enclosed in radomes that protect the equipment and antenna from the weather. Nine ADS-B enabled applications will be developed and assessed: SBS will be implemented in two segments. SBS - Segment 1: Key remaining Segment 1 implementation milestones are: Complete deployment and certification of equipment to support service delivery in selected locations 2. Confirm minimum avionics performance to ensure future utility. Define additional aircraft to aircraft requirements 6. SBS - Segment 2: The ADS-B "Out" Final Rule for broadcast will be published during the end of Segment 1 and beginning of Segment 2, providing an equipment baseline to continue user equipment and application development and deployment.
