SPOILER ALERT! THOH Act 1 Synopsis and Images Posted on October 2, by Alissa | 71 Comments Update: The update is in the files so I suspect it'll hit app stores soon.

The two were born four years apart. Africa Goodall had always been passionate about animals and Africa, which brought her to the farm of a friend in the Kenya highlands in Leakey, believing that the study of existing great apes could provide indications of the behaviour of early hominids , [10] was looking for a chimpanzee researcher, though he kept the idea to himself. Instead, he proposed that Goodall work for him as a secretary. After obtaining approval from his wife Mary Leakey , Louis sent Goodall to Olduvai Gorge in Tanganyika present-day Tanzania , where he laid out his plans. She went to Newnham College , and obtained a PhD degree in ethology. The couple had a son, Hugo Eric Louis born ; they divorced in But I do believe in some great spiritual power. Goodall is best known for her study of chimpanzee social and family life. She discovered that chimps will systematically hunt and eat smaller primates such as colobus monkeys. But perhaps more startling, and disturbing, was the tendency for aggression and violence within chimpanzee troops. Goodall observed dominant females deliberately killing the young of other females in the troop to maintain their dominance, [19] sometimes going as far as cannibalism. My Thirty Years with the Chimpanzees of Gombe. Her findings revolutionised contemporary knowledge of chimpanzee behaviour, and were further evidence of the social similarities between humans and chimpanzees, albeit in a much darker manner. Goodall also set herself apart from the traditional conventions of the time by naming the animals in her studies of primates, instead of assigning each a number. Setting herself apart from other researchers also led her to develop a close bond with the chimpanzees and to become, to this day, the only human ever accepted into chimpanzee society. She was the lowest ranking member of a troop for a period of 22 months. Among those that Goodall named during her years in Gombe were: In , Goodall established the Jane Goodall Institute JGI , which supports the Gombe research, and she is a global leader in the effort to protect chimpanzees and their habitats. With nineteen offices around the world, the JGI is widely recognised for community-centred conservation and development programs in Africa. They were eager to discuss a range of problems they knew about from first-hand experience that caused them deep concern. The organisation now has over 10, groups in over countries. Currently all of the original Jane Goodall archives reside there and have been digitised and analysed and placed in an online database. Pusey, who managed the archives in Minnesota and worked with Goodall in Tanzania, had worked at Duke for a year. Goodall credits the Understanding Chimpanzees conference, hosted by the Chicago Academy of Sciences , with shifting her focus from observation of chimpanzees to a broader and more intense concern with animal-human conservation. Goodall is a vegetarian and advocates the diet for ethical, environmental, and health reasons. In The Inner World of Farm Animals, Goodall writes that farm animals are "far more aware and intelligent than we ever imagined and, despite having been bred as domestic slaves, they are individual beings in their own right. As such, they deserve our respect. Who will plead for them if we are silent? Goodall called the practice "cruel" and "traumatic" for the monkeys involved. At the time, numbering was used to prevent emotional attachment and loss of objectivity. Goodall wrote in I was ascribing human characteristics to nonhuman animals and was thus guilty of that worst of ethological sins -anthropomorphism. This argument is the focus of a book published by Margaret Power in Craig Stanford of the Jane Goodall Research Institute at the University of Southern California states that researchers conducting studies with no artificial provisioning have a difficult time viewing any social behaviour of chimpanzees, especially those related to inter-group conflict. My goal is to ensure that when this book is released it is not only up to the highest of standards, but also that the focus be on the crucial messages it conveys. In , when Larson visited Gombe [59] he was attacked by a chimpanzee named Frodo. She has received many tributes, honours, and awards from local governments, schools, institutions, and charities around the world. Paul Getty Wildlife Conservation Prize

Synopsis Goblin Slayer Episode 1 On the same day the goddess priest became an adventurer, he heads to the forest cave with the new adventurers to help the goblin's daughter. It was the goblin that is said to be the weakest among the monsters, but they are caught in a trap set in a cave and they fall into a crisis of desperate situation.

Archive 2 - January - December Tidying up reference section[edit] I tried to tidy the references section a little tonight, adding the publication date for the text "How to Get a Ph. I have also added a reference to an article by Dinham and Scott that appeared in the "Journal of Further and Higher Education" that is relevant to this subject. Is there any objections? D" listed as "wrong" and "PhD" as "right" http: On the wider point, it is increasingly very much the case that full stops are not used in acronyms in British English, although I have seen a few exceptions, usually influenced by older teaching. Thus "Doctor" becomes "Dr" but "Professor" becomes "Prof. Thus it should be "Ph. But, of course, rules were made to be broken What does everyone think about it? You may notice, if you look at the history of these Discussion pages, I raised the need for the article to cover training for Ph. However, if you feel that this is not the focal point of the article covered here, perhaps a new article "Doctoral supervision" or words to that effect could be created. The section as it appears here could then be shortened, and be preceded by a sub-heading saying "Main article: Alternatively, this could go in an existing article in Wikipedia on a topic to do with higher education. I really think that the section belongs in Wikipedia somewhere - the question which is now opened to discussion is "Where"? How many Universities actually require mentors to be trained? Is this a universally accepted practice or only limited to a few universities? Is this thought just the opinion of a few authors? This is really an off topic section. A link, say in a "see also" section, to an appropriate article would not be out of place. This means that everything must be written in a neutral tone. The language you added is far from neutral and reflects a clear opinion on your part, for example: They are a cheap source of labor and status for institutions and faculty and, after they earn their degrees, most join the reserve army of the academic underemployed. Here you assert that 1 grad students are a cheap source of labor, and 2 most Ph. Also, I think your statements are specific to certain fields, and also to graduates of certain programs. For example, I know that Ph. On the other hand, graduates of more established programs in the social and natural sciences are doing a bit better. Also it is worth noting that simply making it through a PhD program does not entitle anyone to a high-end academic job. Overall, your additions demonstrate a clear POV. I think you should rewrite them in the most objective, neutral way possible and add them to the appropriate country section, also taking into account the differences among programs, schools, and fields of study. Until then, your additions will continue to be reverted by the various editors of wikipedia and a few automated scripts that will prevent multiple reversions. Please use the talk page to discuss contentious edits. S six years or more. I do agree however with Kevin Sharpe that the decision by the Research Councils in the UK to punish late thesis submissions is counter-productive. A good thing in my opinion about the top U. S research universities is that, because they are much better funded than their UK counterparts, there are really no rigid deadlines to submit your dissertation American lingo for "thesis" after you have passed the quals and had your dissertation proposal accepted by your committee. Quite the contrary, U. S advisors are quite happy to fund you for three, four, or more years as long as you keep publishing journal and conference papers and are doing department work like serving as a teaching assistant for example. Again, having said that, the quality of PhD-level research in top UK universities e. The role of a student in the US is different - research students in my experience often take an active role in teaching and lecturing in a department, which is rare in the UK, so frankly it makes a lot of sense to continue paying a student wage to someone who may effectively be working more or less as a junior lecturer. The UK should either move towards a more US system, where as I understand it exams and coursework are a reasonably important part of the scenario, or a more European system where a thesis is basically a collection of published papers bookended by an introduction and conclusion, perhaps with some sort of separate but related extended essay component to ensure that there is still a chance to pursue themes that may not necessarily be publishable. Besides, another valid point in my opinion is that, even though it is definitely possible to complete acceptable

PhD work in 3 years only, it is also possible to go deeper if you have more time. A few programs at the LSE and some Cambridge departments require for example that first-year PhD students take lecture courses and written exams. Furthermore, most if not all UK universities have some sort of "transfer exam" or "preliminary performance review" at the end of the first year to decide whether a student can be formally registered for a PhD degree or not that would be equivalent to "advancement to candidacy" in the US, albeit faster. In Cambridge and Oxford, candidacy status has to be confirmed at the end of the second year following another formal performance review and students do publish before they graduate, even if that is not strictly required. PhD research to be extended and built upon. Very few UK programmes, to my knowledge, have an actual exam upon which the transfer from usually MPhil to PhD depends. Students generally publish at most if not all universities, certainly not just Cambridge and Oxford, but the point is that it should be mandatory - something built in to the structure of the system. If the LSE and Cambridge have already introduced properly structured PhD programmes then that is an excellent step which should be seen as a best practice to spread throughout the whole system which, like undergraduate degrees, is far, far too arbitrary although perhaps US universities are even worse in that regard, as one comparison. And, on top of that, since actual failure is nigh on impossible in real terms for a completed PhD student, the options are basically no corrections, minor corrections, or major corrections. Therefore, UK students are not at a significant disadvantage in that respect compared to their US counterparts. Second, speaking as someone who earned his PhD in the US, I can tell you that standards for doctoral education in America are not uniform either. In fact, the final oral exam in the US the so-called thesis "defense" in American spelling is even less of a big deal than in the UK, as, unlike in Britain, it is normally an open public exam and failure is also usually not a realistic option. Moreover, PhD candidates may interact multiple times with committee members between the thesis proposal and the defense per se. It is also your publication record and how well-known your advisor and maybe your university are that will determine how easy it will be for you get a post-doc or a faculty position very rare nowadays in the US fresh out of graduate school. That is however not true at all. Moreover, despite a lack of uniform standards, PhD-level research both in the US and Europe is on average of very high quality, sometimes including seminal results with far-reaching impact. As a matter of fact, I actually agree with him/her? I suspect that it is very widespread. But if it is a defined requirement of the US system, then that is highly commendable. I also should have been clear with my comment regarding the localised nature of both systems - yes, the US system is extremely arbitrary in a number of ways due to the devolved nature of standards, curricula etc, and that is not a model for the UK to follow. I rather meant to say that we should cherry pick the best aspects of the US and various European systems - the defined, absolute requirement to publish again deferring to your knowledge that this is actually mandated, the combination of exams, thesis and coursework etc. My point is not so much that completing a PhD is a trivial task, but rather that standards vary widely, not even between institutions, but between the experience of individual students within an institution, since the nature of the system is so subjective and individualised; b as it stands, a PhD is basically a test of endurance, not ability - if you can write a book length thesis in four years, of more or less any quality whatsoever above absolute dredge, then you are going to be awarded a doctoral degree. That is not actually as hard as it may sound - four years or sometimes longer is a very long time. Thanks for the discussion, and I certainly agree that we are most definitely more or less barking up the same tree. On one hand, I sympathize with the idea that a PhD degree should not be an open-ended research program. On the other hand, if that is the case and much of the expectations surrounding PhD-level research have now been de facto transferred to post-doctoral fellowships, then universities worldwide should acknowledge that explicitly as Dr. Sharpe suggests by formally requiring a post-doc for entry-level faculty positions. Perhaps the discussion on this talk page should serve to form the basis for a section on criticism of the modern PhD degree, which the Wikipedia article is lacking at the moment. But yes, basically, a PhD should be a fairly and consistently awarded, with the required standard being as close to uniform between students as possible; b should be a test of both intellect and industry. But we do need some enforced standards, otherwise the whole thing becomes, excuse the pun, a purely academic exercise of very little real value. For my candidacy exam, my university required four examiners at the minimum. Each examiner first gave a series of essay questions that were designed to take 8 to 12 hours to

complete for each examiner. These were "closed book". I was placed in a room with a school laptop that had not internet capability and no other materials in the room. After I completed this week of 12 hours per day writing, I was then questioned by them in an oral defense that lasted 3 hours. I was always required to take 48 hours of coursework. My research component took longer than expected because I worked until my manuscripts produced work that were actually important to the field. I also designed my work myself from the ground up. Folks that walk into a lab doing groundbreaking work and simply do the leg work and write some up have it easy. By the time I was done, due to my own stubbornness in wanting my work to be very original and important, no one on my committee was qualified to properly examine me because my abilities exceeded their own. They deliberated for about 15 seconds prior to awarding me my doctorate. Counting only registered semesters e. If you count total elapsed time from entering a PhD program to graduating wall clock time , as we say in CS , the medians are much higher: So perhaps years is optimistic. In my anecdotal experience, the people I know who took longer than that had part-time jobs, took time off, or even took full-time teaching jobs while still being registered as a grad student. At the same time, it is quite possible for some to finish in four years, and many have. So perhaps changing the statement to say "four to eight years of full-time study" might be more accurate? And then this extra info can be added to show the range of actual time taken to complete. For those in Germany who wish to become university professors, after the Ph. It requires a major publication and often an oral examination by a university faculty. Recently, I understand, there has been a determination that Ph. This strikes me a weird! In Germany only those with doctorates from a German or EU university are permitted this honorific. All sorts of people in Germany have doctorates, but in the university those entitled to use the honorific "Prof. Jim Lacey talk And North American PhDs require a thesis and an oral exam, so the Habilitationsschrift hardly looks like an extra requirement to the rest of us. Any North American academic who fails to publish will never make it past Assistant Professor, so the effect is pretty much the same in the end. To clarify, the Habilitationsschrift is independent of the PhD thesis or exam, and is not a requirement for obtaining a PhD.
