

### 1: K Street Studio - Materials Science, Spreadsheets - Introduction

*Engineers and scientists can use spreadsheets to help them quickly solve technical problems. Ideal for analyzing and manipulating data, Quattro Pro spreadsheet software from Borland International, also turns out to be an excellent tool for technologists requiring database management, mathematical.*

I would like to be able to view these spreadsheets on my Windows 10 system, and if possible, convert the Quattro Pro files to Excel files. The Quattro Pro files are using the .WB1 format. While the current version of Open Office can read .WB1 files, it cannot convert them to Excel format. Do you know of a program that can read and convert the .WB1 files to Excel? I look forward to hearing from you. In fact, the Excel file formats supported are .XLS and .XLSX. Howard wrote in again with these comments: I just checked and Libre Office converts Quattro Pro files just fine, thanks! The fact that Libre Office can go back to these old files is one advantage it has over Open Office. You might like to record somewhere the ease with which you can convert from .WB1 to Excel using Libre Office - in case someone else asks you! As for instructions on how to convert Quattro Pro files to Microsoft Excel, refer to the steps below. How to Convert Quattro Pro files and more to Excel Format Note that these instructions will work for just about any spreadsheet program file format supported by LibreOffice and not just Quattro Pro files: Open the spreadsheet file that you want to convert to Excel format. .WB1 spreadsheet file, but if you have another spreadsheet file written by another office suite, you can most likely use that too, since LibreOffice supports many, many formats. Once the spreadsheet file is opened, click File from the menu, then Save As, then click on the File Type button, and then choose your desired format. Got a Computer Question or Problem? I need more computer questions. If you have a computer question -- or even a computer problem that needs fixing -- please email me with your question so that I can write more articles like this one. Dennis Faas is the owner and operator of Infopackets. For technical support inquiries, Dennis can be reached via Live chat online this site using the Zopim Chat service currently located at the bottom left of the screen ; optionally, you can contact Dennis through the website contact form.

## 3: Quattro Pro® For Scientific And Engineering Spreadsheets

*Robert G. Parks Quattro Pro® for Scientific and Engineering Spreadsheets With 91 Figures Springer-Verlag New York Berlin Heidelberg London Paris Tokyo Hong Kong Barcelona Budapest.*

Using spreadsheets requires many of the skills learned when using any programming language, such as: Taking a systematic approach to defining and solving the problem. Organizing data and calculations so that the solution is readily obtained and so that the program can be expanded and adapted to solve similar problems. The ability to think in terms of operations involving blocks of data. Skill with a variety of numerical techniques. Documentation, essential if anyone else must understand how the program spreadsheet works. This would include even the author weeks or years after it was completed. Presentation, never forgetting that the results have to be shown to someone else. Two of the books listed on the resources page speak to these issues. The author of "Spreadsheet Tools for Engineers, Excel Version" describes engineering analysis as a systematic process for which spreadsheets can help solve the problem, once the problem has been defined and the solution set up properly. The authors of "Spreadsheet Applications in Chemistry using Microsoft Excel" note that scientists these days need to be more multi-functional than ever before and literate in the many uses of the computer plotting, data analysis, modeling, reports, presentations, communications and that spreadsheets can play a vital role in these activities. They also note that some teachers and researchers may need a little help and encouragement getting started using spreadsheets. Design Guidelines The goal of SAMS is improving the teaching of materials science and engineering by integrating spreadsheets into the curriculum. The emphasis here is on the materials science. Spreadsheets are simply a powerful tool that should enhance student learning without diverting a lot of their energy to learning spreadsheet programming. In addition, a primary challenge for this project is gaining the acceptance of other instructors who already have well established courses and may be reluctant to change them to incorporate my ideas. In addition, they might not be that familiar with spreadsheets. With all this in mind, the design guidelines for the SAMS modules are: Concentrate on the core subjects that are taught in most materials science programs. The materials science content of the modules will be developed sufficiently enough that instructors may want to use them as supplements. The basic exercises should be similar to those used in many courses. Many will be straight-forward extensions of these by, for instance, asking the student to repeat a calculation for several cases, generate plots for complicated equations, etc. Use only spreadsheet exercises that involve a compelling materials science concept. Do not include spreadsheet exercises that are more about spreadsheets than materials science. Use spreadsheet exercises that the students will appreciate. Ideally, the student will come away from the course with a set of useful spreadsheets. Some instructors may wish to use only small parts of SAMS while a few may want to use complete modules. Make the materials appropriate for a wide range of spreadsheet skill levels. Provide support for beginners and yet challenge the more experienced. Exploit the versatility of spreadsheets. Include exercises and projects that range from simple plots to multi-step modeling of materials phenomena, or importing data files to using spreadsheets to allow students to post and compile data from group experiments. Develop exercises that can be used for routine homework assignments, for term projects, and for laboratory experiments. With the support of NSF in work has begun to transform this loose collection of assignments and classroom experience into a product that others would want to use. When I finally left U. Davis I had completed several modules, and a few of them are available here for downloading. A number of others are in development and will be made available as soon as they are done.

## 4: Pdf Quattro Pro® For Scientific And Engineering Spreadsheets

*Ideal for analyzing and manipulating data, Quattro Pro spreadsheet software from Borland International, also turns out to be an excellent tool for technologists requiring database management.*
