

Reading Science Stories was a fascinating read for me! I may have to find a place to slip this one into our read-aloud time some day. I learned so much from it, and it was written in a very interesting way.

Read all about science Teachers and experts share their secrets on using the news to enrich science class Andrew Bridges Jul 25, 2013: They both make teaching more effective and increase the relevance of what students learn. It includes plenty for her students to read, new vocabulary words to define and questions to answer, all on a standard form. Helens rumbling back to life or the latest outbreak of food-borne illness. Reuter knows her students always look forward to the task. That is because a well-planned current events assignment can tap directly into what interests and motivates them most. Making current events a routine part of science instruction can help reinvigorate student interest in the subject, say teachers and academic experts. So you have to relate the content to what they care about not what you care about. They can then formulate questions for each paragraph of the news story, moving from queries that can be answered in the article to those that may be inferred from it. The goal is to eventually have students answering questions by thinking beyond what they have read. This approach to using current events in the science classroom confers a wide range of benefits. Just reading about scientists experimenting in the lab or working in the field can be an eye-opener for students who have never considered career options beyond, say, professional athlete or recording artist. Supplementing science class with current events demands time and effort, of course. The critical-thinking skills that apply to reading about current events also apply in a test environment, educators add. Reading news stories is also good preparation for emulating scientists. Their go-to media So what materials do teachers rely on most when using current events to augment their science instruction? Generally, they seek news stories that are timely, highly readable and tied, even if tenuously, to the curriculum. Articles that feature scientists at work, come in easy-to-print formats, include actual data and provide a glossary and questions all remain teacher favorites. In general, teachers say, the more yuck, the more luck they have in engaging students. The gross-out factor seemed to really hook them and keep them, she says. Both resources provide content to teachers for free. If tailored correctly, he says, the material will allow even young kids to understand the data and sometimes appropriately challenge whether the authors of the original paper interpreted their findings correctly. Hunting for something germane Incorporating current events in the classroom is rarely as easy as running off a few dozen copies of whatever science story appeared last week in print or online. Teachers lament just how difficult it can be to find articles that are appropriate not only for whom they teach, but also for how, when, why and where. So what does work? White, for one, looks for news stories that neither dumb down the science nor dress it up with cute language. The really good stories sometimes get trotted out, year after year. Old Science News for Kids feature stories on French fries and ice cream are other perennial favorites, she adds. When teachers search for engaging content, they sometimes fail to turn up the perfectly suited article. Reuter, for example, says she is still looking for a news story that she can peg to the laboratory safety unit she teaches each fall. Making kids work One academic expert favors allowing students to do the legwork in finding current events that interest them. Teachers, however, report mixed success in getting students to track down appropriate news stories on their own. For a unit on epidemiology, she focused on a hot topic then in the news: She first divided her class into four groups, assigning each two to three articles, press releases and speeches culled from various sources that reflect differing viewpoints. The first day, each group read its selections and answered basic questions. The second day, she mixed it up, creating new, smaller groups made up of one representative from each of the previous groups. Simmons, when he taught science in the Detroit public school system, used a more gradual introduction to current events. First, he would reach into the lives of students and have them share their experiences. Only afterward would he go on to help them relate their knowledge to a news story. With a topic like asthma, for instance, his students would begin by discussing the trash incinerator just north of downtown Detroit. Then Simmons would introduce news stories about air pollution and respiratory health, leveraging what his students already knew. Crucially, it allows students to connect both their education and themselves to

the world outside the classroom.
