

1: Cancer Facts and Statistics | American Cancer Society

These individuals were not in the labor force, wanted and were available for work, and had looked for a job sometime in the prior 12 months. They were not counted as unemployed because they had not searched for work in the 4 weeks preceding the survey.

This question comes from a search for the motivational factor of employees. Research has revealed that in America more than half of the American workforce feels disengaged from their jobs. As a result, they are not working at their optimal productivity. This costs employers billions of dollars annually as these disgruntled employees spread the effect through the office polluting the healthy work environment. The American can regain the passion for work through recognition of their contribution. Unfortunately, most companies get it all wrong. This article seeks to x-ray how to bring motivation back to the workforce. The Current Workforce It has been discovered that only one third of the average American worker is engaged in their work. This is a stable trend that has been found to occur all year round. Research has also found the following. The survey was carried out across 10 regional offices with the following results linked directly to its impact on the company revenue. Lost Satisfaction Market Tools Inc. It was also discovered that for every 3 employees, 2 were planning to resign from the job. Money is Not the Issue It may be a lot easier to reconnect employees than we might think as it has been discovered that it is not about a pay rise. Here is a list of 7 incentives that would motivate employees at work. Improving Performance Employees desire to receive increasing development that would boost their performance. The following statistics were listed from what employees desire the most out of their employer. When the right stimulus is found to stimulate the growth of a company, then the keys to the success of the business has been located. Here are some indicators to that effect. Recognize and praise your employees often. Why Monetary Incentives Fail Monetary incentives tend to lack trophy value to employees. They cannot be discussed with others and are often forgotten and spent on everyday needs instead. A compensation package is not seen as an incentive program in the eyes of your employees. Results from a survey conducted by Westminster College U. S indicated that incentives would inspire performance. Here is the list of the top motivational techniques for employees. In summary, it is ideal to recognize the contribution made by employees to the growth of the firm. This helps in keeping them more focused and engaged. Their needs are quite achievable and are not tied to monetary values. Company policies should be adjusted to accommodate this as this would significantly boost productivity in the organization.

The latest telecommuting statistics and trend data. Summary of telecommuting trends: Regular work-at-home, among the non-self-employed population, has grown by % since , nearly 10x faster than the rest of the workforce or the self-employed.

Similar state and county data are available through Data for will be available in the Fall. What was your primary means of transportation to work during the survey week? Therefore, all we know about this population is that they worked primarily at home, which we assume means at least half-time. Thus if someone takes work home after being at the office it is considered telework but not telecommuting, and if someone works at home instead of driving to an office they are telecommuting. Both terms were coined by Jack Nilles in the s. We explain the problem here. Summary of telecommuting trends: From to The employee population as a whole not including work-at-home grew by . The self-employed population grew by 2. Forty percent more U. Larger companies are most likely to offer telecommuting options to most of their employees. New England and Mid-Atlantic region employers are the most likely to offer telecommuting options. Full-time employees are four times more likely to have work-at-home options than part-time workers. Non-union workers are twice as likely to have access to telecommuting, but union employee access is growing rapidly. Two to three days a week seems to be the sweet spot that allows for a balance of concentrative work at home and collaborative work at the office. Fortune companies around the globe are entirely revamping their space around the fact that employees are already mobile. It is critical to separate the self-employed from the employee telework and telecommuter population for the purpose of understanding trends as they are moving in opposite directions. That population self-employed not including home-based grew by only 7. Free page report on telecommuting trends Who Telecommutes? Telecommuter Demographics updated Relative to the total population, a disproportionate share of employees in the following occupations telecommute in order of largest disproportion to smallest: Non-exempt employees are far less likely to work at home on a regular or ad hoc basis than salaried employees. Larger companies are more likely to allow telecommuting than smaller ones. Non-union organizations are more likely to offer telecommuting those with unions. For details about how these telework savings were calculated, and for similar information regarding telework in the Federal Government, U. We are constantly updating our database of over 4, documents on telework, office hoteling, activity-based work, co-working, work at home, and other emerging workplace strategies, and workplace flexibility. Women in the Labor Force. Here you will find current and historical statistics on a broad range of topics and sub-populations of women in the labor force.

Workplace Stress Joseph Batson T Increased levels of job stress as assessed by the perception of having little control but lots of demands have been demonstrated to be associated with increased rates of heart attack, hypertension and other disorders. In New York, Los Angeles and other municipalities, the relationship between job stress and heart attacks is so well acknowledged, that any police officer who suffers a coronary event on or off the job is assumed to have a work related injury and is compensated accordingly including heart attack sustained while fishing on vacation or gambling in Las Vegas. It is not the job but the person-environment fit that matters. Some individuals thrive in the time urgent pressure cooker of life in the fast lane, having to perform several duties at the same time and a list of things to do that would overwhelm most of us – provided they perceive that they are in control. They would be severely stressed by dull, dead end assembly line work enjoyed by others who shun responsibility and simply want to perform a task that is well within their capabilities. The stresses that a policeman or high school teacher working in an inner city ghetto are subjected to are quite different than those experienced by their counterparts in rural Iowa. It is necessary to keep this in mind when sweeping statements are made about the degree of stress in teachers, police personnel, physicians and other occupations. Stress levels can vary widely even in identical situations for different reasons. Stress is a highly personalized phenomenon and can vary widely even in identical situations for different reasons. One survey showed that having to complete paper work was more stressful for many police officers than the dangers associated with pursuing criminals. Scientific studies based on this model confirm that workers who perceive they are subjected to high demands but have little control are at increased risk for cardiovascular disease. Digesting the Statistics of Workplace Stress Numerous surveys and studies confirm that occupational pressures and fears are far and away the leading source of stress for American adults and that these have steadily increased over the past few decades. While there are tons of statistics to support these allegations, how significant they are depends on such things as how the information was obtained self-report vs. Such a conclusion might be anticipated from telephone calls to residential phones conducted in the afternoon. It is crucial to keep all these caveats in mind when evaluating job stress statistics. Highlighted statistics from the report: An average of 20 workers are murdered each week in the U. The figures are probably higher since many are not reported. Certain dangerous occupations like police officers and cab drivers understandably have higher rates of homicide and non-fatal assaults. According to an International Labor Organization study, Americans put in the equivalent of an extra hour work week in compared to ten years previously. Japan had the record until around but Americans now work almost a month more than the Japanese and three months more than Germans. We are also working harder. An estimated 1 million workers are absent every day due to stress. The European Agency for Safety and Health at Work reported that over half of the million working days lost annually in the U. If this occurs in key employees it can have a domino effect that spreads down the line to disrupt scheduled operations. Stress due to job insecurity has skyrocketed A government study reported that more jobs had been lost in the previous year than any other year in the last half century, and that the number of workers fearful of losing their jobs had more than doubled over the past decade. That was several years ago and the problem has worsened considerably since then. A February poll found that almost 50 percent of employees were concerned about retaining their job and with good reason. There were massive layoffs due to down-sizing and bankruptcies including the collapse of over dot. The unemployment rate by the end of the year was the highest it had been in 16 months. Nor have things improved since then. Since then we have witnessed the collapse of Enron and its tidal wave of repercussions on other companies and their employees. There are fears that this may be just the tip of the iceberg as accounting irregularities of a similar nature may augur the downfall of other large organizations widely assumed to be on a solid financial footing. Nor is the problem limited to the U. Japan had a similar problem as a result of a major and prolonged recession. A subsequent European Commission survey found that: Job Stress carries a

price tag for U.
