**2: Ray Evans papers,**

*Get this from a library! 13th census, population: New York (State). [United States. Bureau of the Census.; National Archives Trust Fund Board.].*

They composed more than songs, most of which were written for movies and TV shows. Ray Evans was born and grew up in Salamanca, New York. Evans graduated first from his high school. His eloquence and affinity for words was noticed early on. The Seneca High School yearbook from states: At times, his satire is positively killing. Evans played the clarinet and the saxophone; Livingston played the piano and conducted. They started improvising songs together. Their first success came with an audition for the comedians Olsen and Johnson in The song became a hit in and proved to be the starting point of a successful songwriting career. After a temporary interruption due to the war, Livingston and Evans moved to Los Angeles in They later worked for Universal Studios, Warner Bros. Ray Evans and Jay Livingston, who died in , were a song-writing team for life. They continuously received honors and awards, among which were three Oscars and four more nominations for the Academy Award. About twenty-six of their songs sold over one million copies. Livingston and Evans were honored with the prestigious Aggie Award. On a personal level, probably in , Evans met his wife Wyn Ritchie. Wyn was the daughter of English musical actors. She worked in the film industry, acted, and was interested in the arts and in writing. Wyn and Ray were married 19 April In the early s the couple built a house; it received much attention in the press and earned them and the architect William Sutherland Beckett an "Architectural Record Award of Excellence for House Design. Ray Evans died in Los Angeles in Most documents span the years to and reflect his professional life as a songwriter. The University of Pennsylvania acquired them in The collection of sheet music is truly comprehensive; it consists of individual printed scores and copies of each score bound in several volumes. The theme song for "Bonanza," "Que sera, sera," "Silver bells," "Tammy," and other works are available in different arrangements, varying editions, and multiple languages. Evans collected more than commercial recordings featuring his songs, the earliest dating from Most of the recordings are analog sound discs, including inch 78s, 7-inch "singles" and "extended play" records, and inch vinyl records. There are also some cassette tapes and digital sound discs. Non-commercial audio and visual recordings are made up of unpublished and pre-published commercial recordings, studio recordings, radio airchecks, concert and event recordings, and interviews as well as copies of commercial recordings. They date from and are comprised of analog sound discs, compact discs, tape reels, sound cassettes analog and digital , video cassettes, digital video discs, a film reel, and a hard disk drive of audio files. Evans kept numerous press clippings pertaining to his songs. They fill several scrapbooks and folders and include reviews, announcements, hit-parade charts, and other articles. Most of the original clippings have been replaced by laminated photocopies. While the collection contains many awardsâ€”among them the Aggie Award, gold records, Academy Award nomination certificates, and honorary plaquesâ€”it does not include any Oscars. Yet, considering that most of his songs were written for movies, the correspondence with major film production companies is scarce. Also, many letters and telegrams are only available in the form of photocopies. Only a few letters reflect his correspondence with family members. Not all of his lyrics are preserved in their original form in this collection. Only one Academy Award nominated song is included: The collection includes the typescript of "Silver bells" with the originally title, "Tinkle bells. There are no financial records preserved in this collection, except for some incomplete lists of song earning statements. The Ray Evans papers also include a large amount of photographs. They fill 29 boxes. A few photographs are from Paramount Studios and from early cruises where Evans played in the band. There are also a few pictures from his childhood and of his mother. Most of the pictures are travel photographs that he and his wife took. The couple completed several world-wide trips. In addition to traveling they also enjoyed modern art and designs. Some of the artwork they acquired can be found in this collection.

**3: New York State Economic Report - March**

*Federal Population Censuses - Part 4 Federal Population Census Part 4. See Also: Queens (EDs ) County. Rensselaer (EDs ,*

Gross Domestic Product GDP was stagnant in real terms or inflation-adjusted dollars even before the September 11 terrorist attack. In addition, GDP growth had rapidly decelerated in the three quarters prior to the attack. Economic weakness had been part of a larger global downturn, making it unlikely that worldwide demand would help to turn the national economy around. Despite these signs of weakness, just before the attack most economists expected economic growth to start picking up some time in the second half of This drop is particularly dramatic given that initial readings for GDP growth in the first half of the year had been known for some time. Figure 10 The economic outlook in September just before the terrorist attack was already significantly worse than most economists had expected in the beginning of the year. One good barometer of business expectations is the performance of the stock market, which had shown a downward trend since late see Figure Figure 11 The entire net stock price drop experienced in occurred before the terrorist attack. Since September 11, even including the record drop in the first week of trading, stock prices have increased overall. This downward stock price trend before the attack reflected a decline in expectations regarding the business environment that began long before September After reaching a low point on September 21, , the stock market rapidly rebounded to pre-attack levels. Members of the National Bureau of Economic Research who date recessions place the start of the current recession as March Causes and Nature of the Current Recession In addition to the September 11, , attack, there are several other factors contributing to the current recession. The current recession was triggered at least in part by a decline in investment. Preparation for Y2K had driven up technology investment, and a subsequent bubble continued that trend even though no major glitches were found. However, this bubble eventually burst in late and High oil prices in late and early also reduced corporate profits and, therefore, decreased investment activity. Also contributing to the current recession was an ongoing decline in the manufacturing sector. The decline in the stock market since late was a dramatic shift from a strong upward trend in the late s and in early The drop in stock prices in may reflect a correction from what Federal Reserve Chairman, Alan Greenspan, has called "irrational exuberance" in the stock market. Self-fulfilling psychological momentum is an important cause of this recession and others. Talk of an economic downturn or possible recession was growing since late The September 11 attack caused a psychological as well as physical shock that created an expectation of an economic decline. This psychological shock reduced business investment and affected consumer behavior. Fortunately, there are some positive factors that differentiate the current recession from prior recessions. First, it is important to note that the banking system remains strong. Banking institution closures during the recession had helped to extend the recession, but that is not expected to occur now. Oil prices were also an important causative factor in the recession and the recession. This time, low oil prices should help to buoy the economy. Stimulative monetary and fiscal policy will also be important in expediting a recovery. Monetary policy in particular has been extremely stimulative with an unprecedented eleven consecutive rate cuts implemented in Perhaps the most positive factor differentiating the current recession from prior recessions is that it may end up being the shortest and mildest on record. In late February , it was reported that most economists 60 percent on the National Association for Business Economics Forecasting Panel believe the recession is already over. At a national level, there has been a large macroeconomic effect that is distinct from any physical damage from the attack. Across the country, transportation and production were disrupted, reducing output even where no physical damage occurred. Safety concerns and changing airline security procedures along with reduced general economic activity has led to reduced spending on airlines, hotels, and travel in general. Even outside of these sectors, consumer behavior in general has been affected. Lower consumer confidence led to reduced spending. Although the largest macroeconomic impact was on the demand side of the economic equation, production has also been affected by the attack. Due to the uncertain environment, business investment declined. In addition, a pre-occupied workforce hurt productivity. All these factors combined have resulted in

a drag on the economy as an indirect result of the attack. As stated in The New York Times, "All these changes since September like every decision to cancel a business trip or a vacation, or to hold off on a factory expansion or a kitchen renovation-add up to an uncertainty tax on the economy. This includes the loss of lives, capital, and jobs as well as long-term disruption to transportation and other activity over a vital part of Manhattan. It is important to note that though the economy was experiencing weakness prior to September 11 and the recession was determined to have started in March, the attack may have intensified and lengthened the decline in the economy enough to turn it into an official recession. However, it is possible that the attack caused a permanent shift in the structure of the New York State economy, not unlike the shift in the early s prompted by rapidly rising oil prices. Consumer attitudes towards airline transportation and travel may have taken a long-term shift. The securities industry may continue to migrate away from its traditional Manhattan center. Transportation, utilities, buildings, and infrastructure may not rebound readily, leading to more business and residential migration away from Manhattan. These issues may present less of a risk to the forecasting period than to the longer-term outlook for New York State. However, they present an important risk that must be recognized. It should also be recognized that even in the short term, the economic environment includes a much higher level of uncertainty than in a typical forecasting period due to the national economic shock as well as the local disruption from the September 11 attack. This economic report is intended primarily to be a forward-looking document. Since almost half a year of post-attack economic activity and the attack itself are now part of history, the focus of this report is on forecasting the future of the economy rather than precisely decomposing what portion of the drop in economic activity between September 11 and today was caused by the attack versus the normal business cycle. However, prior unpublished analysis by the Ways and Means Committee staff suggests that roughly forty percent of the national GDP slowdown in was attributable to the events of September For New York State variables, the effect of the attack is more pronounced, with about sixty percent of the drop in wages and eighty percent of the drop in employment for being attributable to the September 11 attack rather than a pre-existing economic slowdown see Figure Effect of the Terrorist Attack on Travel-Related Industries Consumer demand has likely been most affected from the terrorist attack in the airline and travel industries. Airline travel experienced several effects from the attack. Air travel during the week of the attack was disrupted, causing a short-term reduction in output for this industry. Airline demand was also affected by increased security measures that often make travel less convenient and more time consuming. In addition, airline cutbacks reduced the flexibility and availability of airline flights. National Travel Airline demand in terms of revenue passenger miles was flat for the first eight months of compared to see Figure In September, revenue passenger miles declined a sharp However, it should be noted that airline demand has partially recovered from the low-point just following the terrorist attack. By December, airline revenue passenger miles were down In addition, the number of flights was reduced by a similar amount, reducing airline costs along with revenues. This may compensate for the effect of the attack; however, it is important to note that the airlines were already suffering from a difficult year prior to September Although revenue passenger miles did not decline from January to August compared to the prior year, this was only after the average airline price was reduced by 5 percent. At the same time, jet fuel and labor costs were up over levels, squeezing profits in an industry that traditionally has operated on thin margins. Some of the trouble in this industry came from sources other than the September 11 attack. Figure 13 Hotels suffered secondary effects from the reduction in airline travel. Hotel spending on the part of consumers was also directly impacted by reduced vacation travel following the attack. It is possible that people stranded in hotels due to airline stoppages the week of the attack also helped to mitigate some of the drop in hotel revenue for the week of September when compared to the larger drop for the week of September Hotel revenue, like the airlines, shows a deep bottom followed by a rebound. Hotel revenue per available room was already down from the level in the first week of September, before the attack. When viewed at a weekly level, hotel revenue per available room has already rebounded nearly to the pre-attack level. Unlike hotels and airlines, the effect of the attack on national restaurant revenues was minimal. Restaurant revenue across the country was actually up for the full month of September compared to the same month in However, the restaurant revenue growth rate dropped temporarily from the 5 percent growth rate experienced in the first

eight months of the year. Some hotels housing displaced businesses and residents had occupancy rates of 80 to 90 percent just after the attack, while others had been hit harder than the rest of the nation. Overall, relative to , revenue per available room is lower in New York City than in the rest of the nation. The drop in New York City is two to three times as large as the nation in some periods. However, this is due to economic conditions existing before the attack. Revenue per available room in the City was down 27 percent compared to the prior year even before the attack. About the same time as the rest of the nation, revenue per available room in the City rebounded to pre-attack levels. The current national recession is predicted to be short and mild, with economic growth starting to accelerate as early as the second quarter of this year. Growth will then stabilize between 3. The numbers for reflect this change. The growth rates in the forecast were also changed to reflect the revised levels. However, the forecast was not rerun to reflect this new data. The Ways and Means Committee staff forecasts that consumption spending will decelerate year-over-year to 1.

*Volume Reel - New York Federal Population Census Schedules - Washington County.*

The family moved to North Carolina soon after his birth. The eighth of nine children of a tenant farmer, Luther Hodges went to work at age twelve as an office boy in a textile mill in Spray, N. Later, he worked his way through the University of North Carolina, where he was president of the student council and of his senior class. He rose rapidly in the company--as personnel manager, production manager, general manager for all Marshall Field mills, and vice-president. Throughout his business career, he was involved in civic affairs, including the YMCA and the Rotary Club, and in politics by working in the election campaigns of others. In , while living in New York, he volunteered for service with the federal government and was made price administrator of the textile division of the Office of Price Administration. He later served briefly as a consultant to the secretary of agriculture, and as textile consultant for the United States Army in Germany. After his retirement from Marshall Field in , Hodges became chief of the industry division of the Economic Cooperation Administration in West Germany. In , he was a consultant for the State Department on the International Management Conference, a top-level technical assistance program for European business corporations. Throughout his career to this point, Hodges practiced his theory that businessmen should be involved in government. Upon returning to North Carolina, Hodges in became a candidate for the Democratic nomination for lieutenant governor. Although virtually unknown in many areas of the state, he conducted a vigorous grassroots campaign against more established politicians and led the field in the primary. No runoff was called, and Hodges was elected lieutenant governor in the fall. He was sworn in during the inauguration ceremonies of Governor William B. Umstead in January Hodges became governor when Umstead died in November In the six years that followed, Governor Hodges used his experience in business to develop new approaches to the problems of North Carolina, particularly those relating to employment. His industrialization program was the hallmark for the South. In education, Hodges was able to increase appropriations, initiate a grass-roots campaign to gain public support for schools, and set a moderate course for school desegregation. He was instrumental in court improvement and in prison rehabilitation programs, including work release. In , when he ran for his own four-year term, Hodges carried every county. Kennedy to be his Secretary of Commerce. In his four years as commerce secretary under presidents Kennedy and Lyndon B. Johnson, Hodges reorganized the Commerce Department, created an Area Development Administration to help depressed areas, and was instrumental in the passage and implementation of the Trade Expansion Act. He worked for greater international trade and tourism. He went to work for the Research Triangle Foundation of North Carolina at a salary of one dollar a year and continued to work for the economic development of the state. In , he became the president of Rotary International and for the next year traveled around the nation and the world for Rotary. They were the parents of two daughters, Betsy and Nancy, and a son, Luther, Jr. The following year Hodges married Louise Finlayson, who survived him. Luther Hodges died in and was buried in Eden, N. The official papers of Luther Hodges as lieutenant governor and governor are in Raleigh, N. Included in this collection are personal papers that, until , were located in the private manuscript collections in the North Carolina State Archives. Also included are some letters about the Economic Cooperation Administration in post-World War II Germany; a small amount of family correspondence; speeches made as governor and Secretary of Commerce; schedules and appointment books; trip reports to friends and family from many trips overseas, including trips to Asia and Africa; manuscripts of books written by and about Hodges; and scrapbooks with clippings about Gov. Hodges, his political career, business matters, and desegregation.

He attended the common schools and Graniteville Academy. During Brown worked as a law clerk and secretary. After a competitive examination he was appointed official Court Stenographer of the Second Judicial Circuit, a position he held until Before he was twenty-two years old he passed the South Carolina bar exam and was admitted to practice law June 3, December 30, , Annie Love Sitgreaves and Brown married. They had one child, Emily. Brown was active in the Democratic party serving as Chairman of the state party and on the Executive Committees at the county, state, and national levels. He was a state representative from In he became Speaker of the House. In he resigned the speakership to run for the United States Senate. Dial and Ed Smith and lost to Smith in the second primary. In , he was elected to the South Carolina Senate where he served until his retirement, July 28, The Democratic Executive Committee chose him to be the Democratic candidate. Strom Thrumond opposed him in a write-in campaign and defeated Brown. Following a temporary absence in , when dual office holding was a question, he was elected a Life Trustee in From Clemson he received an honorary Doctor of Laws degree in He continued his strong support during the periods when Clemson was transformed from a small, all-white military college into a coeducational, integrated university. He attended as a Delegate the National Democratic Conventions in , , , , , , and As a result of injuries received in an automobile accident, Brown died on June 26, Brown had died earlier on May 26, , as had his daughter, Emily Jefferies, on April 11, House of Representatives where he served Chairman of S. S-Senate, resigning Speakership to run-Opposed by N. Senate, opposed by Governor Olin D.

## 8: Contest Overview Report

*New York: State Click on the buttons in the status column below to view the records or to volunteer to help.*

The land around the Poesten Kill was owned by Skiwias and was called Panhooseck. The area around the Wynants Kill, was known as Paanpack, was owned by Peyhaunet. The land between the creeks, which makes up most of downtown and South Troy, was owned by Annape. South of the Wynants Kill and into present-day North Greenbush, the land was owned by Pachquolapiet. These parcels of land were sold to the Dutch between and and each purchase was overseen and signed by Skiwias, the sachem at the time. Dirck Van der Heyden was one of the first settlers. An early local legend that a Dutch girl had been kidnapped by an Indian male who did not want her to marry someone else gained some credence when two skeletons were found in a cave under Poestenkill Falls in the s. One skeleton was female and Caucasian with an iron ring. The other was Native-American and male. The township included Brunswick and Grafton. Troy became a village in and was chartered as a city in In, the city of Lansingburgh was merged into Troy. Quartermaster supplies were shipped through Troy. A local butcher and meat-packer named Samuel Wilson supplied the military, and, according to an unprovable legend, barrels stamped "U. Troy has since claimed to be the historical home of Uncle Sam. Through much of the 19th and into the early 20th century, Troy was not only one of the most prosperous cities in New York State, but one of the most prosperous cities in the entire country. Prior to its rise as an industrial center, Troy was the transshipment point for meat and vegetables from Vermont, which were sent by the Hudson River to New York City. The Federal Dam at Troy is the head of the tides in the Hudson River and Hudson River sloops and steamboats plied the river on a regular basis. This trade was vastly increased after the construction of the Erie Canal, with its eastern terminus directly across the Hudson from Troy at Cohoes in Later on, ore and coal from the Midwest was shipped on the Erie Canal to Troy, and there processed before being sent on down the Hudson to New York City. The iron and steel was also used by the extensive federal arsenal across the Hudson at Watervliet, New York, then called West Troy. After the American Civil War, the steel production industry moved west to be closer to raw materials. The presence of iron and steel also made it possible for Troy to be an early site in the development of iron storefronts and steel structural supports in architecture, and there are some significant early examples still in the city. The initial emphasis on heavier industry later spawned a wide variety of highly engineered mechanical and scientific equipment. Troy was the home of W. And Troy was also home to a manufacturer of racing shells that used impregnated paper in a process that presaged the later use of fiberglass, Kevlar and carbon fiber composites. This scientific and technical proficiency was supported by the presence of Rensselaer Polytechnic Institute, or RPI, one of the highest-ranked engineering schools in the country. RPI was founded in, and eventually absorbed the campus of the short-lived, liberal arts-based Troy University, which closed in during the Civil War. Rensselaer founded RPI for the "application of science to the common purposes of life", and it is the oldest technological university in the English-speaking world. The poem was published anonymously. Its author has long been believed to have been Clement Clarke Moore, but its author is now regarded by a few to have been Henry Livingston, Jr. The first team to call Troy home was the Troy Haymakers, a National Association team in and One of their major players was Williams H. Their last manager was Jimmy Wood, reckoned the first Canadian in professional baseball. The Troy Haymakers folded, and Troy had no team for seven seasons. The Trojans were not competitive in the league, but they did have the biggest hitter in professional baseball, Dan Brouthers. Troy has been nearly destroyed by fire three times. The Great Troy fire of burnt the W. Gurley Building, now a National Historic Landmark: In, Robert Ross, a poll watcher, was shot dead and his brother wounded by operatives of Mayor Edward Murphy, later a U. Senator, after uncovering a man committing voter fraud. The convicted murderer, Bartholomew "Bat" Shea, was executed in, although another man, John McGough, later boasted that he had actually been the shooter. Lansingburgh is thus often referred to as "North Troy". However, prior to the annexation, that portion of Troy north of Division Street was called North Troy and the neighborhood south of Washington Park is referred to as South Troy. Lansingburgh was home to the Lansingburgh Academy. Illustration for Arrow Collar, This also allowed the

collars and cuffs to be starched separately. On February 23, , members of the union went on strike. There were further developments in the industry, when, in , Sanford Cluett invented a process he called Sanforization , a process that shrinks cotton fabrics thoroughly and permanently. Likewise, the stricter control of morality laws in the neighboring New England states encouraged the development of openly operating speakeasies and brothels in Troy. Gangsters such as " Legs Diamond " conducted their business in Troy, giving the city a somewhat colorful reputation through World War II. A few of the buildings from that era have since been converted to fine restaurants, such as the former Old Daly Inn. Like many old industrial cities, Troy has had to deal with not only the loss of its manufacturing base, but a loss of population and wealth to suburbs and other parts of the country. Kurt Vonnegut lived in Troy and the area, and many of his novels include mentions of "Ilium" an alternate name for Troy or surrounding locations. Vonnegut wrote Player Piano in , based on his experiences working as a public relations writer at nearby General Electric. As of [update] , Troy is updating its citywide comprehensive plan for the first time in more than 50 years. It is the distributing center for a large area. The city borders within Rensselaer County, Schaghticoke to the north, Brunswick to the east, and North Greenbush to the south; to the west the city borders the Albany County town of Colonie , the villages of Menands and Green Island , and the cities of Watervliet and Cohoes. To the northwest Troy borders the Saratoga County village of Waterford within the town of Waterford The western edge of the city is flat along the river, and then steeply slopes to higher terrain to the east. The average elevation is 50 feet, with the highest elevation being feet in the eastern part of the city. The city is longer than it is wide, with the southern part wider than the northern section of the city the formerly separate city of Lansingburgh. Several kills Dutch for creek pass through Troy and empty into the Hudson. The Poesten Kill and Wynants Kill are the two largest and both have several small lakes and waterfalls along their routes in the city.
